

POŽARNI PRAKTIKUM

UČNI NAČRT PREDMETA/COURSE SYLLABUS

Predmet:	Požarni praktikum
Course title:	Fire's practicum
Članica nosilka/UL Member:	UL FKKT

Študijski programi in stopnja	Študijska smer	Letnik	Semestri	Izbirnost
Tehniška varnost, druga stopnja, magistrski (od študijskega leta 2023/2024 dalje)	Ni členitve (študijski program)	1. letnik, 2. letnik		izbirni

Univerzitetna koda predmeta/University course code: 0072280
 Koda učne enote na članici/UL Member course code: TV2B4

Predavanja /Lectures	Seminar /Seminar	Vaje /Tutorials	Klinične vaje /Clinical tutorials	Druge oblike studija /Other forms of study	Samostojno delo /Individual student work	ECTS
		75			75	5

Nosilec predmeta/Lecturer: izr. prof. dr. Janez Cerkovnik, prof. dr. Simon Schnabl

Vrsta predmeta/Course type: izbirni strokovni/Elective Professional

Jeziki/Languages:	Predavanja/Lectures:
	Vaje/Tutorial:

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Študent oz. kandidat mora imeti predmet opredeljen kot študijsko obveznost.

Prerequisites:

The course has to be assigned to the student.

Vsebina:	Content (Syllabus outline):
1. Varnost v požarnem laboratoriju - pregled opreme - varnostna navodila 2. Vrste požarnih preskusov - preskusi v majhnem merilu i. potrebna oprema ter metode za izvajanje preskusov ii. standardi iii. pregled stanja v svetu - preskusi v naravnem merilu i. potrebna oprema ter metode za izvajanje preskusov ii. standardi iii. pregled stanja v svetu 3. Požarni preskusi v majhnem merilu –	1. Safety in fire testing laboratory - equipment - safety instructions 2. Types of fire tests - small-scale tests i. testing equipment and methods ii. standards iii. global picture - full-scale tests i. testing equipment and methods ii. standards iii. global picture 3. Small-scale fire tests—calorimeter i. plastic materials ii. wood

<p>Kalotimeter</p> <p>i. plastični materiali</p> <p>ii. les</p> <p>iii. kompozitni materiali</p> <ul style="list-style-type: none"> - čas, potreben za vžig materiala ob pilotnem plamenu ali iskri - analiziranje toplotnega toka - princip porabe kisika - izvajanje meritev ob vertikalnem vzorcu - obdelava podatkov - statistično vrednotenje podatkov - zanesljivost meritev <p>4. Požarni preskusi v naravnem merilu</p> <ul style="list-style-type: none"> - analiziranje podatkov - primerjava izsledkov preskusa z preskusom v majhnem merilu <p>5. Preučevanje obnašanja materialov pri požaru z metodami termične analize</p> <ul style="list-style-type: none"> - določevanje učinkovitosti požarno-zaščitnih intumescenčnih premazov - termična stabilnost nekaterih toplotno-izolacijskih materialov (kamena volna, steklena volna, stiropor) - kvalitativno določevanje plinskih zvrsti, ki nastanejo pri požaru stiropora in poliuretana 	<p>iii. composites</p> <ul style="list-style-type: none"> - time to ignition with pilot flame or spark - heat flux analysis - principle of oxygen consumption - implementing measurements with vertical sample - data processing - statistical analysis of data - reliability of measurements <p>4. Real-scale fire tests</p> <ul style="list-style-type: none"> - data analysis - comparison of test results with small-scale tests <p>5. Studying materials behaviour on fire using methods of thermal analysis</p> <ul style="list-style-type: none"> - efficiency determination of fire-protective intumescence coatings, - thermal stability of some thermal-insulating materials (glass wool stone wool, polystyrene) - qualitative determination of gases species, formed during combustion of polystyrene and polyurethane

Cilji in kompetence:

Predmet je namenjen poglabljanju znanj o dinamiki požara ter teoriji goreњa. V sklopu predmeta je zajeto delo v laboratoriju, izvedba analiz posameznih materialov ter njihovega obnašanja med gorenjem. Študenti spoznajo praktične metode izvajanja meritev na področju požarnega inženiringa ter se srečajo predvsem z stožčastim kalorimetrom.

Objectives and competences:

The course is intended for deepening knowledge about fire dynamics and combustion theory. Students work in laboratories, carry out analyses of different materials and study their behaviour during burning and learn different practical measurement methods related to fire engineering, and learn how to use cone calorimeter.

Predvideni študijski rezultati:

Znanje in razumevanje

Intended learning outcomes:

Knowledge and Comprehension

Študentje naj bi razširil osnovna teoretska in praktična znanja. Prav tako bodo sposobni kritično presoditi zmogljivosti nekaterih standardnih metod, jih ovrednotiti in interpretirati.

Uporaba

Požarni praktikum je usmerjen v reševanje praktičnih problemov, ki so nujni tako pri snovanju novih učinkovin, kot tudi pri njihovi uporabi. Pri predmetu naj bi študentje pridobili znanja, ki jim omogočajo izvedbo temeljnih požarnih preizkusov. Poleg fizikalno-kemijskih osnov, ki so osnova razumevanje teorije gorenja pri požarem preizkušu bodo študenti pridobili tudi praktična znanja, ki so potrebna pri zasnovi in izvedbi meritev ter interpretaciji podatkov in dobljenih rezultatov. Pomemben vidik predmeta je predstaviti študentu kritičen pogled na podajanje rezultatov in zmogljivosti različnih preizkusnih postopkov.

Refleksija

Teoretska in praktična znanja bo lahko študent uporabil pri reševanju praktičnih in teoretskih problemov (študij in praksa). Spoznanja o zmogljivostih in omejitvah posameznih metod v praksi pomenijo osnovo za mnoge obdelati ter primerno interpretirati.

Prenosljive spremnosti

Pri predmetu bo študent pridobil laboratorijske spremnosti, znal bo uporabljati podatke, izvajati nekatere fizikalne meritve, eksperimentalne podatke bo znal ustrezno obdelati ter primerno interpretirati.

Students should upgrade basic theoretical and practical knowledge. They will also be able to critically estimate the performance of some standard methods, evaluate and interpret them.

Application

Fire practicum is focused on solving practical problems, important in design of new materials as well as in their use. In this course students should acquire skills that enable them to perform basic fire tests. In addition to the physico-chemical properties, which are base for understanding fire theory during fire-test performance, students will also gain practical skills. The letter is needed for setting-up and performing measurement, for data evaluation and interpretation of the results. An important aspect is to present a critical view on the interpretation of results and performance of different testing procedures.

Analysis

Theoretical and practical skills can be used to solve practical and theoretical problems (study and practice). Awareness about capabilities and limits of individual methods in practice is the basis for many important decisions.

Skill-transference Ability

In this course, students will gain laboratory skills will be able to use data, perform some physical measurements, will be able to manipulate with experimental data and interpret them in a right way

Metode poučevanja in učenja:

Laboratorijske vaje

Learning and teaching methods:

Laboratory practice.

Načini ocenjevanja:

Izpit pisni in ustni. Ocene: 6-10 pozitivno
Vaje: Opravljen kolokvij. Pri vajah predstavlja delež ocene tudi uspešno laboratorijsko delo.

Delež/Weight Assessment:

Written and oral exam. Positive grades from 6 - 10 Practice: completed colloquium. Part of the final grade is also laboratory work.
