Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Predmet imajo opredeljen kot študijsko obveznost študenti, ki so vključeni v projekt "Materiali za shranjevanje in pretvorbo energije +" (MESC+). Lahko ga vpišejo tudi drugi tují študenti na mednarodni izmenjavi na UL. Študenti morajo biti vpisani na MŠP Kemija, 2. stopnja, ali imeti podpisani učni sporazum (LA) med UL FKKT in drugimi tujimi izobraževalnimi ustanovami.	This course will be assigned to the students who are part of the "Materials for Energy Storage and Conversion +" (MESC+) project. It is available to other foreign international exchange students as well. Students must be enrolled to the USP Chemistry, 2nd Cycle or have signed learning agreement between UL FKKT and other foreign educational institution.
---	--

Vsebina:

Kristalne strukture: amorfno in kristalinično stanje, primeri struktur.	Content (Syllabus outline):
Simetrija: ugotavljanje simetrije na primerih struktur, simetrijski elementi, točkovne skupine, prostorske skupine, kristalni sistemi, osnovna celica, kristalne mreže.	Crystal structures: amorphous and crystalline state, examples of structures. Symmetry: exploring symmetry in the example structures, symmetry elements, point groups, space groups, crystal systems, unit cell, crystal lattices.
Difrakcija: radiacija in njena interakcija s kristali, Braggov zakon, difrakcija na monokristalu in prahu.	Diffraction: radiation and its interaction with crystals, Bragg law, single crystal and powder diffraction.
Identifikacija in kvantifikacija faz: osnove metode, uporaba obstoječega znanja (zbirke podatkov), primer	Phase identification and quantification: origin of the method, use of existing knowledge (databases)

<p>iskalnega programa, osnove in primeri kvantitativne fazne analize.</p> <p>Osnove reševanja struktur: difraktogram in struktura informacija, metode z monokristali, praškovne metode, koraki določanja strukture iz praškovnih difrakcijskih podatkov.</p> <p>Rietveldovo prilagajanje: informacijska vsebnost praškovnega difraktograma, možne uporabe RP.</p> <p>Osnove fizike trdnega stanja in teoretske kemije: zveza med lastnostmi na atomski skali in makroskopskimi lastnostmi z nekaj primeri.</p>	<p>example of a search-match program, basics and examples of quantitative phase analysis.</p> <p>Crystal Structure solution-basics: diffraction pattern and structural information, singe crystal methods, powder methods, steps of structure determination from powder diffraction data.</p> <p>Rietveld refinement: information content in the powder pattern, possible uses of RR.</p> <p>Basics in Solid State Physics and Theoretical Chemistry: relation between atomic-scale properties and large-scale properties with some examples.</p>

V. K. Pecharsky and P. Z. Zavalij: Fundamentals of Powder Diffracton and Structural Characterization of Materials, Springer, ISBN 0-387-24147-7, New York, USA, 2005.

Cilji in kompetence:	Objectives and competences:
Cilji: Razumevanje struktturnih principov v trdninah, njihove lastnosti in metode njihovega proučevanja, temelječe na difrakciji.	Objectives: Understanding of structural principles of solids, their properties and diffraction-based methods of studying thereof.
Kompetence: Uporaba osnovnih tehnik karakterizacije, temelječih na praškovni difrakciji.	Competences: Use of basic powder-diffraction-based characterization techniques.

Predvideni študijski rezultati:	Intended learning outcomes:
Znanje in razumevanje Poznavanje temeljnih struktturnih principov v anorganskih in organskih trdninah ter razumevanje le-teh. Usvajanje povezave med kristalno strukturo in njenom difrakcijsko sliko ter načinom njene uporabe. Uporaba Uporaba praškovne difrakcije za temeljno karakterizacijo materialov. Uporaba orodij in podatkov iz kristalografskih podatkovnih zbirk. Refleksija Sposobnost kritičnega pogleda na metode in rezultate praškovne difrakcije v širšem kontekstu karakterizacije materialov. Prenosljive spremnosti Praksa v reševanju problemov. Veščine dela z računalniki. Uporaba zbirk podatkov in branja znanstvenih člankov.	Knowledge and Comprehension Knowledge of the basic structural principles of inorganic and organic solids and understanding of structural principles. Comprehension of connection between crystal structure and its diffraction image and pathways of using thereof. Application Use of powder diffraction for basic characterization of materials. The application of tools and data from crystallographic databases. Analysis Capability of critical view of powder diffraction methods and their results in a broader scope of materials characterization. Skill-transference Ability Practice in problem-solving. Students get skills in working with computers. The application of databases and reading scientific papers.

Metode poučevanja in učenja:	Learning and teaching methods:
Predavanja, vodene vaje ob uporabi računalniških programov, vaje v majhnih skupinah in individualno.	Lectures, tutorials using computer programs, small group and individual exercises.

Načini ocenjevanja:	Delež/Weight	Assessment:

Vsebina:

1. Metode določevanja velikosti in porazdelitve velikosti delcev: definicija disperznega sistema, problem določevanja velikosti nepravilnih delcev, meritve velikosti delcev in porazdelitve velikosti delcev, določevanje faktorjev oblike, definicija specifične površine in meritve specifične površine disperznega sistema, definicija poroznosti in merjenje poroznosti disperznega sistema.	Content (Syllabus outline): 1. Methods for particle size measurement: Definition of disperse systems, particle size determination for irregular particles, particle size and size distribution measurements, shape factor determination, specific surface of a disperse system and specific surface measurements, porosity of a disperse system and porosity measurements.
---	---

<p>2. Termoanalizne tehnike: definicija koncepta termične analize, termogravimetrija (TG), diferenčna termična analiza (DTA) in dinamična kalorimetrija (DSC), TG in DSC kot komplementarni metodi (termična dekompozicija/fazni prehodi). Analiza eksperimentalnih podatkov, zajetih s TG, DTA in DSC metodami za vzorec neznane sestave.</p> <p>3. Elektronska, IR in Ramanska spektroskopija: teoretične osnove IR in Ramanske spektroskopije, principi in primeri IR in Ramanskih meritev.</p> <p>4. Mikroskopija (optična, elektronska): optična in elektronska (SEM, TEM) mikroskopija, EDS in WDS spektroskopija, elektronska difrakcija v TEM mikroskopiji, mikroskopija na atomsko silo (AFM), vrstična tunelska mikroskopija (STM), primeri mikrostrukturne kvantitativne analize različnih materialov.</p>	<p>2. Thermoanalytical techniques: Definition of the concept “thermal analysis”. Thermogravimetry (TG); differential thermal analysis (DTA) and dynamic scanning calorimetry (DSC). TG and DSC as complementary methods (thermal decomposition/phase transition). Analysis of experimental data from TG, DTA and DSC curves, obtained from the compounds with known composition.</p> <p>3. Electron, IR and Raman spectroscopy: theory of IR and Raman spectroscopies, principles and examples of IR and Raman measurements.</p> <p>4. Microscopy (optical, electron, scanning probe): optical and electron microscopy (SEM, TEM), EDS and WDS spectroscopy, electron diffraction in TEM microscopy, atomic force microscopy (AFM), scanning tunneling microscopy (STM), examples of microstructure quantitative analysis of materials.</p>

Temeljna literatura in viri/Readings:

D. A. Skoog, F. J. Holler, S. R. Crouch, Principles of instrumental analysis, 7th Edition, Cengage Learning, 2017, 992 strani (50%).

P. Haines, Principles of Thermal Analysis and Calorimetry, Royal Society of Chemistry, 2002, 268 strani (20%).

Paul van der Heide, X-ray Photoelectron Spectroscopy: An introduction to Principles and Practices, John Wiley & Sons, Inc., 2011, 264 strani (20%)

J.R. Ferraro, K. Nakamoto, C.W. Brown, Introductory Raman Spectroscopy, Academic Press, 2003, 434 strani (10%)

Cilji in kompetence:

Ob zaključenem kurzu študenti:

- Razumejo principe različnih analiznih tehnik s področja ved o materialih
- Znajo uporabiti različne analizne tehnike za analitiko materialov s področja shranjevanja in konverzije energije
- Razumejo omejitve pri uporabi različnih analiznih tehnik
- Znajo samostojno delati z izbrano sofisticirano analizno opremo.

Objectives and competences:

At the end of this course students should be able to:

- Understand the principles of the various analytical techniques applied in Material science.
- Apply individual analytical techniques for novel materials related to energy storage and conversion applications.
- Understand the limitations of individual analytical techniques.
- Be able to perform specific measurements on specific analytical apparatus.

Predvideni študijski rezultati:

Znanje in razumevanje

Študentje spoznajo različne analizne tehnike, ki omogočajo poglobljeno analizo različnih materialov.

Uporaba

Pridobljeno znanje se lahko uporabi za reševanje problemov, povezanih z razvojem naslednje generacije materialov za shranjevanje in konverzijo energije na akademskem in industrijskem nivoju.

Refleksija

Pridobljeno znanje je orodje, ki študentu omogoča reševanje problemov, povezanih z alternativnimi tehnologijami prihodnosti.

Prenosljive spretnosti

Intended learning outcomes:

Knowledge and Comprehension

Students learn about various analytical techniques that enable thorough characterization of materials.

Application

Acquired knowledge will be used in problem solving for the next generation energy storage and conversion devices in academia and European industry.

Analysis

The acquired knowledge is a tool that gives a student the leverage to solving current problems of important alternative technologies of the future.

Skill-transference Ability

Pridobljeno znanje je direktno prenosljivo tudi na druga področja znanosti.

Acquired knowledge is directly transferable to other fields of science.

Metode poučevanja in učenja:

Predavanja, seminarji, laboratorijsko delo

Learning and teaching methods:

Lectures, seminars and labwork.

Načini ocenjevanja:

	Delež/Weight	Assessment:
Laboratorijsko delo	30,00 %	Labwork
Pisni izpit	70,00 %	Written exam

Jeziki/Languages:	Predavanja/Lectures:	Angleščina
	Vaje/Tutorial:	Angleščina

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Predmet imajo opredeljen kot študijsko obveznost študenti, ki so vključeni v projekt "Materiali za shranjevanje in pretvorbo energije +" (MESC+). Lahko ga vpišejo tudi drugi tují študenti na mednarodni izmenjavi na UL. Študenti morajo biti vpisani na MŠP Kemija, 2. stopnja, ali imeti podpisani učni sporazum (LA) med UL FKKT in drugimi tujimi izobraževalnimi ustanovami.

Prerequisites:

This course will be assigned to the students who are part of the "Materials for Energy Storage and Conversion +" (MESC+) project. It is available to other foreign international exchange students as well. Students must be enrolled to the USP Chemistry, 2nd Cycle or have signed learning agreement between UL FKKT and other foreign educational institution.

Vsebina:

- Sinteza nanomaterialov: ravnotežje trdne snovi / raztopine v precipitacijskih tehnikah; sol gel tehnika; hibridni materiali; hidrotermalna in templatna sinteza; lastnosti materialov na nanoskali
- Uporaba nanomaterialov pri shranjevanju in pretvorbi energije
- Karakterizacijske tehnike za nanomateriale
- Praktična uporaba nanomaterialov v različnih elektrokemičnih celicah

Content (Syllabus outline):

- Nanomaterials synthesis: solid/solution equilibria applied to the precipitation; sol gel technique; hybrid Materials; hydrothermal and templating synthesis; materials at the nanoscale
- Application of nanomaterials in energy storage and conversion
- Characterization techniques for nanomaterials
- Practical implementation of nanomaterials into different electrochemical cells

<ul style="list-style-type: none"> Prednosti in slabosti uporabe nanomaterialov Kritična ocena praktične uporabe nanomaterialov 	<ul style="list-style-type: none"> Advantages and drawbacks of using nanomaterials Critical assessment of nanomaterials in practical application
---	--

Temeljna literatura in viri/Readings:

Cao Guozhong, Ying Wang, Nanostructures and Nanomaterials: Synthesis, Properties, and Applications, World scientific publishing Co., **2011**, Print ISBN: 9814322504 (60%)
Mahmood Aliofkhazraei, Handbook of Functional Nanomaterials: Application and Development, Nova Science Publishers, **2014**, Hardcover ISBN: 1629485667 (20%)
Najnovejša literature (20%)

Cilji in kompetence:

Študenti se seznanijo z različnimi sinteznimi tehnikami za pripravo nanomaterialov za shranjevanje in pretvorbo energije. Med predavanji in seminarji so navedeni različni primeri uporabe nanomaterialov pri shranjevanju in pretvorbi energije. Dodaten poudarek je na karakterizacijskih tehnikah ter prednostih in slabostih nanomaterialov pri shranjevanju in pretvorbi energije.

Objectives and competences:

Students are introduced to various synthesis techniques for the preparation of nanomaterials for energy storage and conversion. Different cases of application of nanomaterials in energy storage and conversion are given during the lectures and seminars. Additional emphasize is on the characterization techniques and advantages and disadvantages of nanomaterials in energy storage and conversion.

Predvideni študijski rezultati:

Znanje in razumevanje:

Študenti spoznajo različne sintezne pristope za pripravo nanomaterialov, njihove lastnosti, karakterizacijo in uporabo v zvezi z materiali za shranjevanje in pretvorbo energije.

Uporaba:

Pridobljeno znanje bo uporabljeno v akademskih krogih in evropski industriji pri načrtovanju in sintezi nove generacije aktivnih materialov za naprave za shranjevanje in pretvorbo energije.

Refleksija:

Pridobljeno znanje je orodje, ki študentu daje vzvod za reševanje trenutnih problemov pomembnih alternativnih tehnologij prihodnosti.

Prenosljive spremnosti:

Pridobljeno znanje je neposredno prenosljivo na druga znanstvena področja, kot so kemija, kemijsko inženirstvo in elektrotehnika.

Intended learning outcomes:

Knowledge and Comprehension

Students learn about different synthesis approaches for nanomaterials preparation, their properties, characterization and applications related to energy storage and conversion materials.

Application

Acquired knowledge will be used in the design and synthesis of novel active materials for the next generation energy storage and conversion devices in academia and European industry.

Analysis

The acquired knowledge is a tool that gives a student the leverage to solving current problems of important alternative technologies of the future.

Skill-transference Ability

Acquired knowledge is directly transferable to other fields of science such as chemistry, chemical engineering, and electrical engineering.

Vsebina:

Energijski koncepti Primarne in sekundarne baterije (akumulatorji), konvencionalni fosilni viri energije, ne-fosilni primarni viri in nosilci energije, neobnovljivi in obnovljivi viri energije, pretvorba energije (termodynamski vidiki in učinkovitost), trenutna poraba energije in s tem povezani problemi, prihajajoče nove tehnologije in različni scenariji za prihodnost Naprave za shranjevanje energije	Content (Syllabus outline): Energy concepts Primary vs. secondary energy sources (energy carriers), conventional fossil fuel sources, non-fossil primary sources and energy carriers, non-renewable vs. renewable energy sources, conversion of energy (thermodynamics and efficiency aspects), state-of-the art energy consumption and issues, possible future technologies and scenarios Energy Storage Devices
---	---

Uvod in primerjava najpomembnejših sodobnih naprav za shranjevanje energije, kot so baterije, kondenzatorji, superkondenzatorji (elektrokemijski kondenzatorji), vztrajniki, magnetni načini shranjevanja energije, črpalne hidroelektrarne, shranjevanje vodika. Obravnava kriterijev za selekcijo najprimernejših tehnologij: tehnična zrelost, upravljanje/uravnavanje obremenitev, vpliv na okolje (biološka obremenitev, učinek tople grede ipd.), kvaliteta (specifične) moči naprave, učinkovitost, stroški.

Baterijske tehnologije

Zgodovinski razvoj z vidika razvoja mehanizmov in kemizma shranjevanja energije v baterijskih napravah. Podrobna predstavitev najpomembnejših sistemov (svinčeve baterije, nikelj-kadmij, nikelj-kovinski hidrid, litij-ionske baterije, post litij-ionski sistemi). Prednosti in slabosti različnih sistemov. Predstavitev in podrobnejša obravnava tipičnih odprtih vprašanj, povezanih s sodobnimi baterijskimi sistemi, predstavitev usmeritev za prihodnost.

Proizvodnje vodika, njegov transport in klasično shranjevanje

Uvodna predstavitev vodika kot enega najpomembnejših nosilcev energije v ekonomiji prihodnosti. Obravanava aktualnih in prihajajočih tehnologij za proizvodnjo vodika: elektroliza, fotoliza, termoliza, proizvodnja iz biomase, termokemični cikli. Primerjava tehnologij z vidika zrelosti, učinkovitosti, predstavitev odprtih vprašanj. Obravnava klasičnih tehnologij za shranjevanje vodika: shranjevanje plinastega vodika, utekočinjanje vodika in njegovo shranjevanje. Transportne tehnologije, varnostni vidiki.

Shranjevanje vodika v kovinskih hidridih in kompleksnih hidridih

Uvod v splošne principe in metode kemijskega shranjevanja vodika. Termodinamski vidiki shranjevanja vodika v kovinskih hidridih. Predstavitev najobetavnejših preprostih hidridov za uporabo v vodikovi ekonomiji (magnezijevi hidridi oz. hidridi prehodnih kovin). Kompleksni kovinski hidridi (na primer NaAlH₄, LiAlH₄, LiBH₄ ipd.). Vpliv nanostrukturiranosti na različne vidike shranjevanja (kapaciteta, kinetika, ciklabilnost, temperatura sproščanja, cena itd.).

Introduction and comparison of main modern storage devices such as batteries, capacitors, supercapacitors, flywheels, magnetic ESDs, pumped hydro energy storage , hydrogen storage. Various selection criteria will be discussed: load management, technical maturity, environmental impact (biological impact, greenhouse gas emissions etc.), power quality, efficiency, costs.

Battery technologies

Historical development in the context of storage mechanisms and chemistries. Detailed presentation of the most important systems (lead-acid, nickel-cadmium, nickel-metal hydride, lithium ion, post-lithium ion systems etc.). Advantages and disadvantages of various systems. Presentation of open questions in modern systems, discussion of possible solution and research directions.

Hydrogen production, transport and classical storage

Introduction of hydrogen as important future energy carrier. Presentation of emerging hydrogen production technologies: electrolysis, photolysis, thermolysis, production from biomass, thermochemical cycles. Comparison in terms of maturity, efficiency, discussion of open issues. Classical hydrogen storage technologies: gaseous hydrogen storage, hydrogen liquefaction, liquid hydrogen storage. Transport technologies including safety issues.

Hydrogen storage in metal hydrides and complex hydrides

Introduction to general chemical hydrogen storage principles and methods. Thermodynamic aspects of hydrogen storage in metal hydrides. Presentation of most promising simple hydrides for use in a hydrogen economy (magnesium or transition metals hydrides), complex metal hydrides (for example NaAlH₄, LiAlH₄, LiBH₄ etc.). The impact of nanostructurization on performance requirements for storage (capacity, kinetics, cyclability, cost, release temperature).

Predvideni študijski rezultati:	Intended learning outcomes:
<p>Znanje in razumevanje Študenti pridobijo temeljna znanja, potrebna za razumevanje delovanja naprav za shranjevanje energije. Podrobno razumejo delovanje sodobnih baterijskih naprav in mehanizme shranjevanja energije v obliki kovinskih hidridov. Sposobni so sestaviti enostavno baterijsko celico in izmeriti njene glavne karakteristike.</p>	<p>Knowledge and Comprehension Students acquire base knowledge needed for understanding operation of devices for energy storage. They understand in detail the operation of modern battery systems and mechanisms of energy storage in metal hydrides. They are able to construct a simple battery cell and measure its main characteristics.</p>
<p>Uporaba Pridobljeno splošno in teoretično znanje je usmerjeno v poznvanje delovanja konkretnih aplikacij s področja shranjevanja energije, predvsem baterij in kovinskih hidridov. Deloma je zajeta tudi obravnava nekaterih drugih sodobnih naprav za shranjevanje energije. Študenti se na teh področjih usposobijo za samostojno raziskovalno delo in spoznajo načine prenosa in uporabe teoretskih zakonitosti v praksi.</p>	<p>Application Acquired base knowledge is implemented in selected energy storage applications, in particular in batteries and metal hydrides. Partly the mechanisms of other modern storage systems are also highlighted and discussed. electroanalytical methods etc. Students become qualified for independent research in the field and get knowledge about transfer of theoretical concepts into practice.</p>
<p>Refleksija Pridobljeno teoretično znanje omogoča študentom poglobljen vpogled v osnovne koncepte in zakonitosti na področju shranjevanja energije. Dodatno študenti pridobijo večine prenosa osnovnih znanj na izbrane praktične primere, kot so baterije, kovinski hidridi in podobno. Vsebina in izvedba predmeta predstavlja dobro osnovo za kasnejše aktivno in samostojno udejstvovanje na področju raziskav in uporabe znanj s področja shranjevanja energije v praksi.</p>	<p>Analysis Acquired theoretical knowledge enables a profound insight into main concepts and laws in the field of energy storage devices. Additionally, the students acquire the ability to apply knowledge base into selected practical examples. The curriculum represents a solid background for later active and independent research in the fields of basic and applied research in the field of storage devices, in particular batteries and metal hydrides.</p>
<p>Prenosljive spremnosti Pridobijo večine na področju konceptov in naprav za shranjevanje energije, znajo uporabljati znanstveno in strokovno literaturo ter pravilno predstaviti in</p>	<p>Skill-transference Ability Students acquire experimental skills in the field of energy storage devices, master the use of scientific and professional literature and develop the skill of presenting and explaining complex and specific</p>

razlagati merske rezultate. Pridobijo znanja, potrebna za projektno in timsko delo.

results to wider audience. Competences needed for project and team work are also developed.

L. Bently and B. Sherman, Intellectual Property Law, Oxford University Press; 3rd edition (November 15, 2008), ISBN-13: 978-0199292042 (20%)

Najnovejša literature (ključne besede: kako napisati uspešen projekt, kako pripraviti patentno vlogo, ... (10%)

Cilji in kompetence:

Ob koncu tega predmeta so študentje sposobni:

- strukturiranja rezultatov v izčrpano poročilo / predlog članka / magistrsko delo;
- poročanja o rezultatih pred različnimi skupnostmi (strokovna, nestrokovna ali laična javnost);
- priprave poročil in predstavitev, ki je razumljiva, brez balasta, gladka in logična;
- študenti bodo dobili vpogled v strokovni razvoj s poudarkom na možnostih doktorskega študija in potencialnem podoktorskem študiju.
- iskanja literature z različnimi iskalniki;
- pisanja projektnih predlogov;
- ustrezne zaščite intelektualne lastnine;
- priprave patentne prijave;
- predloga projekta za industrijskega partnerja.

Objectives and competences:

At the end of this course students are able to:

- structure results into the comprehensive report/manuscript/thesis;
- report results in front of different communities (professional, public or lay community);
- preparation of the reports and presentation which is understandable, without ballast, smooth and logical;
- students will get insights about professional development, with a focus on possibilities in the PhD study and potential postdoctoral research studies.
- search for the literature by using different search engines;
- write a proposal for governmental funds;
- apply proper protection of intellectual property;
- draft a patent application;
- convince an industrial partner to invest in their research.

Predvideni študijski rezultati:

Znanje in razumevanje:

Študenti se naučijo predstaviti rezultate na razumljiv način, kako pisati poročila, magistrska in doktorska dela, predloge člankov. Študentje dobijo nekaj vpogleda v možnost razvoja po magistrskem študiju v akademskem in zasebnem sektorju.

Študenti se bodo naučili, kako iskati literaturo, katere iskalnike je mogoče uporabiti, kako razvrstiti raziskovalno literaturo in kako prepoznati zanesljive rezultate.

Izvedeli bodo o različnih možnostih za zaščito intelektualne lastnine, kako izpolniti patentne prijave, kaj je pomembno in kakšne so razlike med različnimi možnostmi. Zadnji del predmeta bo namenjen pisanju projektov: individualni – različne štipendije in obsežni projekti. Kako delati v velikih konzorcijih in kako dobiti neposredne pogodbe z industrijo.

Uporaba:

Intended learning outcomes:

Knowledge and Comprehension

Students learn how to present results in the understandable way, how to write reports, theses, manuscripts, policy of publishers. Students get some insights about possibility of carrier development after master study in academia and private sector.

Students will learn how to search for the literature, which search engines can be used, how to classify research literature and how to recognize trustable results.

They will get explanations about different possibilities to protect intellectual property, how to fill in patent applications, what is important and what are differences between different options. Last part of the course will be devoted to writing projects: small – individual fellowships and large-scale collaboration projects. How to work in large consortiums and how to get direct contracts with industry.

Application

Pridobljeno znanje bo uporabljeno pri kariernem in osebnem razvoju. Refleksija: Pridobljeno znanje je orodje, ki študentom pomaga pri njihovem poklicnem in osebnem razvoju. Prenosljive spretnosti: Pridobljeno znanje je zelo koristno v prihodnjih študijah, razvoju nosilcev in v osebnem življenju.	Acquired knowledge will be used in carrier and personal development. Analysis The acquired knowledge is a tool that helps students in their personal carrier development. Skill-transference Ability Acquired knowledge is widely useful in future studies, carrier development, and in personal life.

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Predmet imajo opredeljen kot študijsko obveznost študenti, ki so vključeni v projekt "Materiali za shranjevanje in pretvorbo energije +" (MESC+). Lahko ga vpisujejo tudi drugi tuji študenti na mednarodni izmenjavi na UL. Študenti morajo biti vpisani na MŠP Kemija, 2. stopnja, ali imeti podpisani učni sporazum (LA) med UL FKKT in drugimi tujimi izobraževalnimi ustanovami.

Prerequisites:

This course will be assigned to the students who are part of the "Materials for Energy Storage and Conversion +" (MESC+) project. It is available to other foreign international exchange students as well. Students must be enrolled to the USP Chemistry, 2nd Cycle or have signed learning agreement between UL FKKT and other foreign educational institution.

Vsebina:

Materiali na osnovi ogljika so nepogrešljivi v sodobnih tehnologijah. Poleg tega je nedavni razvoj ogljikovih nanomaterialov privedel do intenzivnih znanstvenih dejavnosti s ciljem, da se razvije nov razred materialov za nove aplikacije, vključujuč naprave za shranjevanje in pretvorbo energije (ESC). V zvezi s tem je namen tega predmeta kontekstualizirati nedavni napredok ogljikovih

Content (Syllabus outline):

Carbon based materials are indispensable in modern technologies. Furthermore, recent development of carbon nanomaterials has resulted in intensive scientific activity with a goal to develop new class of materials for new applications including energy storage and conversion (ESC). In this respect this course aims to contextualize the recent advances in carbon materials by providing a broader view of their

materialov z zagotavljanjem širšega pogleda na njihove lastnosti, na sinteze poti, njihove lastnosti in funkcionalizacije. Poleg opisa različnih vrst materialov iz ogljikovih allotropov, bo zajeta tudi njihova uporaba in vloga v ESC.	properties, how they are synthesized, how they are characterized, and how they are functionalized. Besides describing different types and uses of carbon allotrope materials, their application and role in ESC will be also be covered.
---	--

Temeljna literatura in viri/Readings:

- Wen Lu, Jong-Beom Baek, Liming Dai, *Carbon Nanomaterials for Advanced Energy Systems*, John Wiley & Sons, Inc., 2015, Print ISBN:9781118580783 (80%)
 Brownson, Dale A. C., Banks, Craig E., *The Handbook of Graphene Electrochemistry*, Springer-Verlag London, 2014, Hardcover ISBN: 978-1-4471-6427-2 (10%)
 Recent articles from the literature (10%).

Cilji in kompetence:

Cilj predmeta študentje bodo znali:
 Določiti, kaj so ogljikovi materiali, in prepoznati različne allotropne modifikacije ter njihovo uporabo.
 Razumeli bodo sintezo, funkcionalizacijo, karakterizacijo in načine uporabe za različne ogljikove allotrope.
 Razumeli bodo uporabo allotropov ogljika v napravah ESC.
 Znali bodo ugotoviti in razložiti, zakaj imajo nanoogljiki drugačne lastnosti kot njihovi volumenski materiali.
Kompetence: znanje, kako oblikovati in napisati manjši predlog raziskav v zvezi z uporabo ogljikovih allotropov v napravah ESC.
 Pridobljeno znanje je neposredno prenosljivo na druga znanstvena področja, kot so kemija, kemijsko inženirstvo in elektrotehnika.

Objectives and competences:

Objectives students will be able to:
 Define what carbon materials are, identify different allotropes and their applications.
 Understand synthesis, functionalization, characterization and application routes for various carbon allotropes.
 Understand application of carbon allotropes in ESC devices.
 Identify and explain why nanocarbons have different properties from their bulk counterparts.
Competences: ability to design and write a small research proposal related to application of carbon allotropes in ESC devices.
 Acquired knowledge is directly transferable to other fields of science such as chemistry, chemical engineering, and electrical engineering.

Predvideni študijski rezultati:

Znanje in razumevanje:
 Študenti spoznajo lastnosti ogljikovih allotropov, sintezo, funkcionalizacijo in aplikacije, povezane z materiali za shranjevanje in pretvorbo energije.
 Pridobljeno znanje znajo uporabiti za reševanje problemov za naprave za shranjevanje in pretvorbo energije nove generacije v akademskih krogih in evropski industriji.
 Znajo uporabiti znanje za reševanje trenutnih problemov alternativnih tehnologij prihodnosti.

Intended learning outcomes:

Knowledge and understanding:
 Students learn about carbon allotropes properties, synthesis, functionalization and applications related to energy storage and conversion materials.
 They can apply the acquired knowledge to problem solving for the next generation energy storage and conversion devices in academia and European industry.
 They can apply their knowledge to solving current problems of important alternative technologies of the future.

Metode poučevanja in učenja:

Predavanja, seminarji s preučevanjem člankov in diskusijo, laboratorijsko delo.

Learning and teaching methods:

Lectures, seminars with literature study and discussions, labwork.

Načini ocenjevanja:

	Delež/Weight	Assessment:
Laboratorijske vaje	30,00 %	Labwork
Analiza članka	10,00 %	Article analysis
Raziskovalni predlog (pisni del)	40,00 %	Research proposal (written part)
Raziskovalni predlog (predstavitev, diskusija)	20,00 %	Research proposal (presentation, discussion)

ANALIZNA KEMIJA

UČNI NAČRT PREDMETA/COURSE SYLLABUS

Predmet:	Analizna kemija
Course title:	Analytical chemistry
Članica nosilka/UL	UL FKKT
Member:	

Študijski programi in stopnja	Študijska smer	Letnik	Semestri	Izbirnost
Kemija, druga stopnja, magistrski	Materiali za shranjevanje in pretvorbo energije (smer)	2. letnik	1. semester	obvezen

Univerzitetna koda predmeta/University course code:	0190400
Koda učne enote na članici/UL Member course code:	TU23UN

Predavanja /Lectures	Seminar /Seminar	Vaje /Tutorials	Klinične vaje /Clinical tutorials	Druge oblike študija /Other forms of study	Samostojno delo /Individual student work	ECTS
30	15	30			75	6

Nosilec predmeta/Lecturer:	Mitja Kolar
----------------------------	-------------

Vrsta predmeta/Course type:	obvezni/Mandatory
-----------------------------	-------------------

Jeziki/Languages:	Predavanja/Lectures:	Angleščina
	Vaje/Tutorial:	Angleščina

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Predmet imajo opredeljen kot študijsko obveznost študenti, ki so vključeni v projekt "Materiali za shranjevanje in pretvorbo energije +" (MESC+). Lahko ga vpišejo tudi drugi tují študenti na mednarodni izmenjavi na UL. Študenti morajo biti vpisani na MŠP Kemija, 2. stopnja, ali imeti podpisani učni sporazum (LA) med UL FKKT in drugimi tujími izobraževalnimi ustanovami.

Opravljanje študijskih obveznosti: predpogoj za pristop h kolokviju iz laboratorijskih vaj je uspešno zaključen praktični del vaj; opravljen kolokvij iz vaj je predpogoj za pristop k pisnemu izpitu.

Prerequisites:

This course will be assigned to the students who are part of the "Materials for Energy Storage and Conversion +" (MESC+) project. It is available to other foreign international exchange students as well. Students must be enrolled to the USP Chemistry, 2nd Cycle or have signed learning agreement between UL FKKT and other foreign educational institution. Assessment prerequisites: successfully accomplished lab work is a precondition for attending the written assessment; successfully accomplished laboratory tutorial is a precondition to attend the written exam.

Vsebina:

Uvod v analizno kemijo (opredelitev, pomen, delitev analizne kemije-podpodročja, temeljni analizni pojmi: analit, matrica, merjenec, metoda, tehnika itd.). Stopnje in izbira analiznih postopkov, vrednotenje analiznih rezultatov, validacija metod in postopkov, napake v analizni kemiji. Pomen in vrste kalibracije

Content (Syllabus outline):

Introduction to analytical chemistry, terminology, specific analytical statement of a problem, selection of a procedure. Evaluation and presentation of analytical results, sources and types of errors, validation. Calibration in analytical chemistry (method of linear

<p>(metoda umeritvene krivulje, metoda standardnega dodatka, metoda internega standarda).</p> <p>Gravimetrija (princip in uporabnost gravimetrične analize, primeri gravimetričnih določitev).</p> <p>Volumetrija: nevtralizacijske, kompleksometrične, obarjalne in redoks določitve (potek titracijskih krivulj, načini ugotavljanja končne točke, izbira indikatorjev, izbrani primeri določitev, avtomatizacija).</p> <p>Uvod v elektrokemijo, pregled elektrokemijskih metod: potenciometrija (značilnosti, merilni sistem, vrste elektrod in uporabnost), voltametrija (značilnosti metode, merilni sistem, voltamogram-interpretacija, sodobni elektrodnji materiali, tehnike). Konduktometrija, kulometrija, amperometrija in elektrogravimetrija (značilnosti metod in njihova uporabnost).</p> <p>Uvod v spektroskopijo in pregled spektroskopskih metod. Molekularna absorpcijska in fluorescenčna spektrometrija (uporaba spektrometrije v UV-VIS in IR področju, lastnosti spektrov, instrumentacija).</p> <p>Atomska emisijska spektromerija (AES) v plamenu in plazmi - ICP. Elektrotermična (ETAAS) in absorpcijska spektrometrija (AAS) v plamenu.</p> <p>Separacijske metode: princip kromatografske ločbe in delitev kromatografskih tehnik - tankoplastna kromatografija (TLC), tekočinska kromatografija visoke ločljivosti (HPLC) in plinska kromatografija (GC) (različne izvedbe sistemov, sklopitve, uporabnost).</p> <p>Laboratorijske vaje: pri vajah se študenti usposobijo za praktično izvedbo klasičnih in instrumentalnih analiznih metod.</p>	<p>calibration, method of standard additions, method of internal standard).</p> <p>Gravimetric analysis (properties, application and examples of gravimetric procedures).</p> <p>Volumetric analytical methods: neutralisation, redox, precipitation and complex-formation titrations (titration curve, types of indicators, analytical applications, automatization.)</p> <p>Introduction to electrochemistry and electrochemical methods: Potentiometry (method characteristics, measuring system, types of electrodes, approaches for determining concentration, potentiometric titrations); Voltammetry (method characteristics, measuring system, voltammogram-interpretation, novel electrode materials, techniques). Conductometry, coulometry, amperometry and electrogravimetry (method characteristics and analytical applications).</p> <p>Introduction to spectroscopy and principles of spectroscopic methods. Molecular absorption and fluorescence spectrometry (method and spectra characteristics, UV-VIS and IR spectrometry, instrumentation). Flame emission (AES) and inductively coupled plasma (ICP) spectrometry. Atomic absorption spectrometry (AAS) and atomic absorption spectrometry with electrothermal atomization (ETAAS).</p> <p>Separation methods: fundamentals of chromatography and principles of different chromatographic methods: thin layer chromatography (TLC), high performance liquid chromatography (HPLC), and gas chromatography (instrumental setup, hyphenation, analytical applications).</p> <p>Laboratory work, performing selected classical and instrumental analytical methods.</p>

- 3.) Wang J., Analytical Electrochemistry, Wiley-VCH. Second Edition, 2001.

Cilji in kompetence:

<p>Pri predmetu študenti osvojijo temelje analizne kemije, spoznajo različne analizne pristope in uporabo klasičnih ter instrumentalnih analiznih metod za reševanje realnih primerov.</p>	<p>Objectives and competences: Students learn the fundamentals of analytical chemistry, analytical approach and application of classical and instrumental analytical methods for real sample analysis.</p>
--	---

Predvideni študijski rezultati:

<p>Znanje in razumevanje Študenti razumejo temelje analizne kemije, osvojijo analizni pristop ter razumejo in znajo uporabljati klasične in instrumentalne analizne metode, s poudarkom na pravilni interpretaciji analiznih rezultatov. Uporaba</p>	<p>Knowledge and Comprehension Students understand the fundamentals of analytical chemistry, analytical approach and background and applications of classical and selected instrumental analytical methods with proper interpretation of analytical results. Application</p>
--	--

Študenti znajo podajati in vrednotiti analizne rezultate ter razlikujejo med različnimi principi določitev. Študenti obvladajo računske vidike obravnavanih analiznih metod.	Students develop the ability of presenting and evaluating analytical results. Students master calculation procedures related to the presented analytical methods.
Refleksija Študenti imajo kritičen odnos do rezultatov analiz in predstavljenih analiznih metod.	Analysis Students develop critical attitude towards analytical results and presented analytical methods.
Prenosljive spremnosti Laboratorijske spremnosti, pravilno podajanje in statistično vrednotenje analiznih rezultatov.	Skill-transference Ability Laboratory skills, expression of analytical results with statistical evaluation.

Metode poučevanja in učenja:

Predavanja, vodení razgovori, sodelovalno učenje, reševanje problemov, laboratorijske vaje.

Learning and teaching methods:

Lectures, guided discussions, cooperative learning, problem solving, laboratory tutorial.

Načini ocenjevanja:	Delež/Weight	Assessment:
Pisni izpit.	50,00 %	Written exam.
Laboratorijske vaje: kakovost analiznih rezultatov	25,00 %	Laboratory tutorial: quality of analytical results
kolokvij	25,00 %	written assessment

It is available to other foreign international exchange students as well. Students must be enrolled to the USP Chemistry, 2nd Cycle or have signed learning agreement between UL FKKT and other foreign educational institution.

Vsebina:

Magistrsko delo se opravlja na področju kemije, smer MESC+. Vsebina in naslov se določata v soglasju z izbranim mentorjem.

Content (Syllabus outline):

Master thesis is performed in one of the areas of chemistry, study field MESC+. Contents and master thesis title are agreed upon with the mentor/supervisor.

Temeljna literatura in viri/Readings:

Knjige in članki, ki so povezani z vsebino magistrskega dela.
Books and journal articles related to the research topic.

Cilji in kompetence:	Objectives and competences:
<p><i>Cilj:</i> Dokončno oblikovanje pričakovanega lika magistranta. Študent bo ob izdelavi magistrske naloge pokazal sposobnosti iskanja in zaznavanja kemijskih problemov in znal poiskati rešitev za tak problem.</p> <p><i>Kompetence:</i> Pri delu bo pokazal, da je pridobil večino kompetenc navedenih v programu študija.</p>	<p>Final formation of the competences of a master degree candidate. Through carrying out research for the master thesis, students should be able to demonstrate the skills for autonomous identification of a problem and finding solutions, thus proving that specific competences from other courses have been acquired.</p>

Predvideni študijski rezultati:	Intended learning outcomes:
Znanje in razumevanje	Knowledge and Comprehension
Pri izdelavi magistrskega dela bo slušatelj pridobil:	
<ul style="list-style-type: none"> • sposobnosti formuliranja problema, • sposobnosti samostojnega iskanja ustrezne literature, • sposobnosti obravnavanja problema v praksi, • sposobnosti iskanja kvantitativnih rešitev in utemeljevanja ustreznosti rešitev, • sposobnosti predstavitev rezultatov svojega dela 	<p>Ability to formulate the problem and research literature independently;</p> <p>Ability of independent problem managing in practice;</p> <p>Ability of independent problem solving and argumentation of the solution;</p> <p>Ability to present results of research work.</p>
Uporaba	Application
Znanje in pridobljene veščine bo magistrant lahko uporabil pri opravljanju poklica.	Acquired skills are necessary for professional work.
Refleksija	Analysis
Povezovanje vseh pridobljenih teoretičnih znanj z reševanjem problemov na področju kemije ter kritični pogled na uporabnost teh znanj.	Integration of knowledge from different topics from chemistry and supporting sciences; Development of a critical view on the knowledge applicability.
Prenosljive spremnosti	Skill-transference Ability
Pri delu bo magistrant pridobil znanja o metodah reševanja kompleksnih problemov, o načinu prezentacije teh znanj v pisani in govorjeni obliki, povezani z ostalimi metodami posredovanja raziskav, ugotovitev itd.	Ability of solving complex problems using different methods; Ability of presenting research results in a written and oral form.

Metode poučevanja in učenja:	Learning and teaching methods:
Individualno delo z mentorjem in samostojno študijsko in raziskovalno delo.	Independent research work supervised by the mentor/supervisor.

Načini ocenjevanja:	Delež/Weight	Assessment:
Komisija za oceno in zagovor magistrskega dela oceni magistrsko delo in zagovor.	100,00 %	Master thesis and its presentation are graded by the thesis committee.
