|--|--|

- človekova razpoložljivost, zanesljivost in učinkovitost
- metode za analizo človekove razpoložljivosti
- ukrepi za spreminjanje zanesljivosti (oblikovanje vmesnika človek – stroj)
- metode za usposoblitev za učinkovito vedenje človek kot upravljač in nadzornik procesa
- človek kot vzdrževalc procesa
- človek kot organizator in tehnolog procesa
- odvisnost napak človeka od njegove vloge v sistemu
- predstavitev metod za oceno človekove zanesljivosti in povezava z metodami za oceno razpoložljivosti
- povezava metod za oceno razpoložljivosti z nekaterimi metodami, ki se uporabljajo v oceni tveganja
- odpravljanje pomanjkljivosti v kompleksnem sistemu, ki so posledice neučinkovitega vedenja človeka
- zagotavljanje ustrezne ravni varnostne kulture
- postavitev ustrezne organizacijske kulture
- spoznavanje komponent človekove razpoložljivosti in zagotavljanje njihove ustrezne ravni glede na vlogo v sistemu
- implementacija rezultatov analiz obratovalnih dogodkov v organizacijsko kulturo sistema
- oblikovanje zaupanja v okolju sistema
- načini komunikacij v normalnem obratovanju in ob nezgodah
- oblikovanje varnostnih skupin

Vsebina seminarske naloge:

Na osnovi znanj iz predavanj in znanj ter izkušenj iz dodiplomskega študija in na osnovi znanj predmeta "Človek v delovnem procesu" izdela študent analizo nezgode v realnem delovnem okolju, določi vzroke dogodka, predloge spreminjanja vedenjskih vzorcev vpleteneih in ukrepe za preprečitev ponovitve.

Seminarsko naložbo predstavijo pred avditorijem študentov.

- Methods for human availability analysis
- Measures for human reliability adaptation (shaping of man-machine interface)
- Methods for shaping of affective behaviour
- Individual as operator and supervisor
- Individual as maintainer in the process
- Organizational and technological role of individual in the process
- Dependence of human errors of his role in the system
- Presentation of human reliability methods connected with human availability methods
- Connection between human availability methods with risk assessment methods
- Elimination of complex system malfunctions caused by human not effective behaviour
- Shaping of adequate level of safety culture
- Shaping of organizational culture
- Identification of human availability components with assurance of correspondence to the role in the system
- Root cause analysis results implementation in organisational culture in the system
- Shaping of relation between system and environment
- Communication patterns in normal operation and in accident
- Shaping of safety groups

The content of project seminar work:

On the basis of obtained knowledge from lectures and on the basis of undergraduate course the student make root cause analysis of a real accident, identify root causes, suggest modification of behaviour patterns, and suggest preventive measure. Project work has to be presented in front of students' auditorium and written report has to be done.

#### **Cilji in kompetence:**

Pri predmetu "Človeški in organizacijski dejavniki" naj bi študentje dobili temeljna znanja o človeških in organizacijskih dejavnikih, ki vplivajo na delovanje sistema ter zagotavljajo varnost v sistemu in njegovi okolici. Dobili bodo temeljna metodološka znanja za identifikacijo ključnih elementov organizacijske in varnostne kulture.

#### **Objectives and competences:**

Students will get basic knowledge about human and organizational factors influencing on system performance and affecting of system and environment safety. They will get basic methodological knowledge for identification of crucial elements of organization and safety culture.

| Predvideni študijski rezultati:   | Intended learning outcomes:   |
|---|---|
| <p>Znanje in razumevanje<br/>Študentje naj bi pridobil osnovna teoretska in praktična znanja, ki so potrebna za analizo dogajanj v sistemu iz vidika človeka in organizacijskih dejavnikov. Pridobijo tudi znanja za oblikovanje ustrezne organizacijske in varnostne kulture v sistemu ter zagotavljanje varnega delovanja in varovanja okolice.</p>   | <p>Knowledge and Comprehension<br/>Students will get basic theoretical and practical knowledge necessary for root cause analysis of incidents in the system from the human and organizational point of view. They will get knowledge for creation of adequate organizational safety culture in the system and for safe performance environment protection.</p>  |
| <p>Uporaba<br/>Študentje bodo znali identificirati temeljne vedenjske vzorce človeka, ki povzročajo motnje v delovanju sistema ter povzročajo neobičajne dogodke.</p>   | <p>Application<br/>Students will be able to identify basic human behaviour patterns causing disturbances in the system performance and accidents. They will be able to perform root-cause analyse and implement preventive measure necessary for stable and safe system performance. Obtained methodological knowledge will be able to use in a real working environment. They will be able to connect human availability with safe and effective behaviour. They will be able to use some methods for reduction of workers work load in the system. From the theoretical and practical point they will be able to implement preventive measures assuring safety of system and environment from human and organizational aspects.</p> |
| <p>Usposobili se bodo za izdelavo analiz in implementacijo konkretnih ukrepov za varno in stabilno delovanje kateregakoli sistema. Na osnovi temeljnih metodoloških znanj bodo znali izdelati aplikativne modele za modeliranje konkretnih delovnih okolij. Naučili se bodo povezovati človekovo razpoložljivost z varnim in učinkovitim vedenjem. Naučili se bodo uporabljati nekatere metode za razbremenitev človeka v delovnem sistemu. Teoretično in praktično bodo usposobljeni za implementacijo dejavnikov, ki zagotavljajo varnost sistema in njegove okolice iz vidika človeka in organizacije.</p> | <p>Analysis<br/>Students will be able to use theoretical and practical skills from project work in solving real problems. Knowledge about human and organizational impacts on system safety will support students to participate in safety assurance prevent accidents. Obtained knowledge should be also the basic for future research and development work.</p>   |
| <p>Refleksija<br/>Teoretska in praktične izkušnje iz seminarske naloge bo študent lahko uporabil pri reševanju praktičnih in teoretskih problemov. Vedenje o človeških in organizacijskih vplivih na varnost sistema bodo študentu omogočala sodelovanje pri zagotavljanju varnosti in preprečevanju neobičajnih dogodkov.<br/>Pridobljena znanja bodo lahko tudi osnova za razvojno raziskovalno delo.</p>   | <p>Skill-transference Ability<br/>Students will get basic knowledge about human and organizational factors affecting systems safety and performance and the safety of environment.</p>  |
| <p>Prenosljive spremnosti<br/>Pri predmetu bodo študentje pridobili osnova znanja o človeških in organizacijskih dejavnikih, ki vplivajo na učinkovitost in varnost sistema in njegove okolice.</p>   |   |

**Pogoji za vključitev v delo oz. za opravljanje  
študijskih obveznosti:**

Študent oz. kandidat mora imeti predmet opredeljen kot študijsko obveznost.

**Prerequisites:**

The course has to be assigned to the student.

#### Vsebina:

Snov zajema celovito predstavitev zakonskih zahtev ter zahtev standardov, na osnovi katerih se vrednoti varnost ter določi ustrezna zaščitna oprema pri določenem delovnem procesu. Omenjene zahteve so ustrezne teoretične utemeljene. Vključene so sledeče teme:

- terminologija s področja varnosti strojev;
- poglobljena obravnava teorije zaščite, ki vključuje strategijo zagotavljanja varnosti, načela zaščite ter načrtovanje zaščite delovnih sredstev, načine izbora zaščitne opreme, nevarnosti pri posameznih vrstah strojev in naprav);
- poglobljena obravnava ocenjevanja tveganja in določanja potrebnega nivoja zaščite;
- tehnike varovanja (sodobne tehnike varovanja, posebnosti varovanja pri posameznih vrstah strojev in naprav);

#### Content (Syllabus outline):

The contents of the course include a presentation of the basic requirements of laws and standards on basis of which the corresponding safety integrity level is estimated and appropriate protective equipment for specific work process is determined. Also included are the theoretical foundations on which each of the requirements is based. It includes the following topics:

- terminology in the field of safety of machinery;
- detailed theory of protection which include the strategy for providing the safety on work, principles of the protection and planning of the protection of occupational equipment, the principles for selection of protective equipment, the hazards at individual machines ;

|  |   |
|--|---|
| <ul style="list-style-type: none"> <li>- poglobljena obravnavna ergonomskih vidikov varnosti pri delu na posameznih vrstah strojev in naprav;</li> <li>- kompleksni sistemi varovanja (mehanski, električni, hidravlični, pnevmatski, digitalni/programirani sistemi)</li> <li>- poglobljena teoretska in praktična obravnavna primerov varnostnih ureditev.</li> </ul> <p>VSEBINA VAJ: Namen vaj je utrditev ter poglobitev razumevanja pridobljenih teoretskih osnov. Vaje potekajo v predavalnici, kjer slušatelji, razdeljeni v manjše skupine (5-6 oseb, do 5 skupin na enkrat) ocenjujejo tveganje in iščejo ustrezne zaščitne ureditve za konkretno primero strojev in postrojenj, s katerimi se seznanijo preko tekstovnega in slikovnega gradiva ter obiskov v podjetjih. Vključena je tudi predstavitev rezultatov ter njihov komentar s strani poslušalcev in učitelja ali asistenta.</p> | <ul style="list-style-type: none"> <li>• detailed risk assessment procedures and procedures for determination of necessary SIL (safety integrity level);</li> <li>• contemporary techniques of protection (particularities of the protection of the various types of machinery) ;</li> <li>• detailed consideration of the ergonomic aspects of safety at work;</li> <li>• complex protection systems (mechanical, electric, hydraulic, pneumatic, digital/programmable systems);</li> <li>• detailed theoretical and practical consideration of the safety arrangements .</li> </ul> <p><b>CONTENTS OF THE EXERCISES:</b> The purpose of the exercises is to strengthen and deepen the comprehension of theoretical foundations. The work takes place in the classroom where students are divided into small groups (5-6 people up to 5 groups at once). They are assessing the risk and looking for appropriate protective arrangements of actual examples of machines and machinery. A presentation of the results and their comment is also included.</p> |

|--|---|
| <p>nivoja zaščite delovnih priprav in se usposobijo za uporabo, analizo in razvoj takih metod. Seznanjo se s slovensko zakonodajo ter slovenskimi in mednarodnimi standardi z obravanega področja in jih znajo samostojno uporabljati.</p> | <p>basic principles of safety techniques. They get acquainted with the operation of protective equipment and are trained to analyse such equipment. They get acquainted with the methods of risk assessment and determining the adequate safety integrity level, and the ability to apply such methods. They get acquainted with the most important Slovenian legislation and the most important Slovenian and international standards in the subject and know how to use them. They become familiar with the procedures for gaining and use of the CE marking.</p> |
|--|---|

#### Predvideni študijski rezultati:

##### Znanje in razumevanje

Pri predmetu bo slušatelj pridobil ustreznata teoretska in praktična znanja, potrebna za reševanje teoretičnih in praktičnih varnostnih problemov. Slušatelj bo po opravljenem izpitu:

- i. seznanjen s strategijo in taktikami varnostne tehnike ter s principi in metodami uporabe varnostne opreme. Predstavljene mu bodo dodatne naloge in izvedbe varovanja, povezane z zapletenimi sodobnimi stroji in napravami;
- ii. seznanjen z aktualnimi metodami za oceno tveganja in določevanje potrebnega nivoja zaščite strojev in naprav ter drugih delovnih priprav;
- iii. seznanjen z delovanjem sodobne zaščitne opreme;
- iv. seznanjen z metodami za presojo ustreznosti obstoječe zaščitne opreme in zaščitnih sistemov;
- v. seznanjen z vsebino slovenske zakonodaje ter slovenskih in mednarodnih standardov z obravnawanega področja;
- vi. seznanjen z možnostmi in načini sodelovanja pri nastajanju zakonodaje in standardov s področja varnosti in zdravja pri delu.

##### Uporaba

Predmet je usmerjen k reševanju praktičnih in teoretskih varnostnih problemov, s katerimi se varnostni inženir/magister srečuje vsakodnevno, bodisi v industrijski praksi ali v sklopu teoretskih in praktičnih raziskav.

Slušatelj bo po opravljenem izpitu:

- i. usposobljen za uporabo, tolmačenje, proučevanje in razvoj osnovnih in njim sorodnih metod za oceno tveganja in določevanje potrebnega nivoja zaščite strojev, naprav ter drugih delovnih priprav;
- ii. usposobljen za uporabo, proučevanje in pomoč pri razvoju različnih vrst zaščitne opreme in sistemov;
- iii. usposobljen za uporabo in razvoj metod za presojo ustreznosti obstoječe zaščitne opreme in zaščitnih sistemov ter za podajanje predlogov o potrebnih izboljšavah;
- iv. usposobljen samostojno izbrati najprimernejše in najučinkovitejše načine za zagotovitev ustreznegra nivoja zaščite strojev ter drugih delovnih priprav ter izbirati med različno na trgu ponujeno opremo brez dvomov, da taka izbira morda ne bi zagotovila

#### Intended learning outcomes:

##### Knowledge and Comprehension

In this course students will acquire basic theoretical and practical knowledge to solve practical safety problems. After the final exam the student will be:

- familiar with the basic principles of safety techniques and methods of use of safety equipment. The contents from the basic techniques of protection against the simple hazards to comprehensive protection tasks associated with complex modern machines will be presented to him;
- familiar with the basic methods for risk assessment and determination of the required safety integrity level of machinery and other occupational equipment;
- familiar with the operation of the basic types of protective equipment;
- familiar with the methods for assessment of adequacy of the existing safety equipment and protective systems;
- familiar with the contents of the most important Slovenian legislation as well as the most important Slovenian and international standards in the subject.

##### Application

The course is oriented to solve safety problems, with which a safety engineer faces on a daily basis, either in practice (as a developer of protective equipment , or in the role of supervisor , who asses the adequacy of protective equipment, its current status and use of this equipment by operators) or in the context of research.

After the final exam the student will be:

- i. Trained for the use and interpretation of the basic methods of risk assessment;
- ii. Trained in usage of the methods for assessing the adequacy of existing safety equipment and protective systems, determining the necessary machinery safety integrity level and other occupationally equipment as well as for advancing proposals about necessary improvements;
- iii. Trained to independently choose the most appropriate and most effective ways to ensure the appropriate level of protection of machinery and other working devices and appliances, and choose between different offers on the market;

nivoja zaščite, ki ga zahtevajo zakoni in družba ter ga omogoča trenutno stanje tehnike;

v. usposobljen samostojno uporabljati slovensko zakonodajo ter slovenske in mednarodne standarde z obarvanega področja;

vi. usposobljen samostojno širiti svoje znanje z obravnavanega področja in pridobivati potrebne dodatne informacije iz slovenskih, evropskih in mednarodnih standardov, iz ustrezne zakonodaje ter iz druge literature.

**Refleksija**

Teoretska in praktična znanja bodo uporabna pri reševanju realnih teoretskih in praktičnih problemov (pri zaščiti konkretnih strojev in naprav oz. pri razvijanju nove zaščitne opreme in zaščitnih sistemov). Spoznanja o uporabnosti in omejitvah posameznih metod varovanja ter posameznih varnostnih analiz predstavljajo trdni temelj za delovanje v praksi in na inštitutih.

**Prenosljive spremnosti**

V okviru predmeta si bo slušatelj utrdil in razširil sledeča znanja oz. spremnosti: iskanje literature, razumevanje zahtevnejših strokovnih in pravnih tekstov, uporaba standardov v tujih jezikih, metode ocenjevanja tveganja, tehnike izdelave poročil.

iv. Trained to independently apply the most important Slovenian legislation as well as the most important Slovenian and international standards in the subject.

#### Analysis

Theoretical and practical knowledge will be useful in solving real life theoretical and practical issues (for the protection of concrete machinery and equipment and in the development process of new protective equipment and protective systems). Insights on the applicability and limitations of individual methods of protection and individual safety analyses represent a solid foundation for working in practice and in institutes.

#### Skill-transference Ability

During the course students will acquire and deepen the following skills or knowledge respectively: searching for the literature, understanding of complex texts such as technical legislation and standards, the use of standards written in foreign languages, risk assessment methods, the principles of making technical reports.

#### Metode poučevanja in učenja:

Predavanja, teoretske vaje, domače delo – izdelava individualnih seminarskih nalog

#### Learning and teaching methods:

Written exam

Seminar

Grades: 6-10 positive, 1-5 negative

#### Načini ocenjevanja:

#### **Temeljna literatura in viri/Readings:**

- S.A. Ness, Air monitoring for Toxic Exposures, Van Nostrand Reinhold, New York. (10 %)
- J.P. Lodge, ed. Methods of Air Sampling and Analysis, Lewis Publishers, Chelsea, Michigan. (10 %)
- D. C. Harris, Quantitative Chemical Analysis, W.H. Freeman, New York. (10 %)
- D.A. Skoog, D.M. West, Holler, Analytical Chemistry an Introduction, Holt-Saunders Int. Ed. New York

#### **Cilji in kompetence:**

Pri predmetu "Inštrumentalna analiza, monitoring, sistemi" naj bi študentje univerzitetnega programa varstva pri delu in požarne varnosti dobil znanje o osnovah jemanja vzorcev zraka v delovnem okolju, določevanju posameznih komponent v vzorcih zraka (monitoring sistemi) ter vrednotenju dobljenih rezultatov s povezavo z ustrezнимi standardi in priporočili

#### **Objectives and competences:**

In this course, "Instrumental analysis and monitoring", the students should gain knowledge about the basics of sampling of air in the work environment, determining the individual components in samples of air (monitoring systems), and the evaluation of the obtained results taking into account the relevant standards and recommendations.

#### **Predvideni študijski rezultati:**

##### Znanje in razumevanje

Študentje naj bi pridobili osnovna teoretska in praktična znanja, ki so potrebna za načrtovanje ter izvedbo meritev onesnaževal v delovnem okolju. Obenem bodo sposobni kritično presoditi primernost posameznih tehnik ter interpretirati dobljene rezultate.

##### Uporaba

Znanje, ki ga bo pridobil student je namenjeno reševanje praktičnih problemov tako pri načrtovanju in izvedbi monitoring sistemov kot tudi za oceno učinkovitosti ukrepov pri sanacija stanja.

Pomemben vidik predmeta je predstaviti študentu kritičen pogled na podajanje rezultatov in zmogljivosti različnih naliznih postopkov.

##### Refleksija

Teoretska in praktična znanja bo lahko študent uporabil pri reševanju realni problemov načrtovanja meritev onesnaževal v delovnem okolju. Spoznanja o zmogljivostih in omejitvah posameznih metod v praksi pomenijo osnovo za mnoge pomembne odločitve.

##### Prenosljive spremnosti

Študenti bodo razumeli pomen validiranih analiznih postopkov. Sposobni bodo kritično ovrednotiti rezultate in jih predstaviti v pisni in ustni obliki, kar je ključnega pomena za nadaljnji proces odločanja za sanacijo stanja v delovnem okolju.

#### **Intended learning outcomes:**

##### Knowledge and Comprehension

Students will acquire basic theoretical knowledge and practical skills necessary for planning and execution of the measurements of pollutants in the work environment. At the same time they will be able to critically assess the suitability of particular techniques and interpret the obtained results.

##### Application

Obtained knowledge will enable students to solve practical problems in both the design and implementation of monitoring systems, as well as to assess the effectiveness of measures taken to improve working environment.

An important aspect of this course is to provide students with a critical view on the reliability of the obtained results as well as the performance of the various analytical procedures.

##### Analysis

Theoretical and practical knowledge will be used by the student to implement the measurements of pollutants in the work environment. Knowledge about

capability and limitation of each method in practice is the basis for many important decisions.

##### Skill-transference Ability

Students will understand the importance of validated analytical procedure. They are able to critically evaluate the results and present them in written and

|  |  |
|--|--|
|  | oral form, which is crucial for further decision making process for improving working environment. |

### Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Študent oz. kandidat mora imeti predmet opredeljen kot študijsko obveznost.

### Prerequisites:

The course has to be assigned to the student.

### Vsebina:

- a) Organizacija ter sestava sil za interveniranje v RS
- b) Vloga lokalnih, občinskih in državnih ustanov
- c) Načrtovanje operacij
- d) Vodenje operacij
- e) Ključni elementi ukrepanja v sili in ob katastrofalnih dogodkih
- f) Ravnanje z nevarnimi snovmi v primeru intervencije ob potresu, požaru, porušitvi objektov itd.
  - hierarhija ukrepanja
  - sile za reševanje
- g) Analiza nekaterih intervencij in ukrepov (v povezavi z MNZ in MORS)
- h) Načini in metode reševanja v primeru nezgodnih dogodkov
- i) Dostopne poti in delovne površine za gasilska intervencijska vozila

### Content (Syllabus outline):

- a) The organization and structure of forces for intervention in RS
- b) The role of local, municipal and state institutions
- c) Planning of operations
- d) Conducting operations
- e) Key elements of the emergency response and the catastrophic events
- f) Handling of hazardous substances in the event of intervention by the earthquake, fire, collapse of buildings, etc..
- Hierarchy of action
- Force rescue
- g) An analysis of some of the interventions and actions (in conjunction with the Ministry of Interior and Ministry of Defence)
- h) The methods and procedures to solve the case of an accidental event

George S. Everly, Jr., Ph.D., F.A.P.M., and Jeffrey T. Mitchell, Ph.D.,

Critical Incident Stress Management: A New Era and Standard of Care in Crisis Intervention

Revija Ujma

Revija Industrial Fire Journal

#### Cilji in kompetence:

Cilj predmeta je spoznati in usposobiti študente z osnovnimi operacijami vodenja in nadzorovanja intervencij ter reševanj ob večjih nezgodah. Poudarek pri predmetu bo na preučevanju nekaterih praktičnih primerov ter analiziraju kriznih situacij. Študenti se bodo v povezavi z Ministrstvom za obrambo - Izobraževalnim centrom za zaščito in reševanje, srečali tudi z praktičnimi prikazi posameznih vrst reševanja.

#### Objectives and competences:

The aim of this course is to train students to meet the basic operations management and control interventions and bailouts during major incidents. The focus of the course will be on examining some practical examples and analysing crises. Students will be in conjunction with the Ministry of Defence - Training Centre for Civil Protection and Disaster Relief, also met with demonstrations of certain types of dispute.

#### Predvideni študijski rezultati:

Znanje in razumevanje

Študentje naj bi pridobil osnovna teoretska in praktična znanja, ki so potrebna za pripravo, organiziranje in vodenje postopkov zaščite in reševanja. Spoznali bodo tako nujne postopke, standardne operativne postopke in metode vodenja in postopke odločanja.

Uporaba

Študentje bodo spoznali temeljne osnove na področju akcij zaščite in reševanja.

Refleksija

Teoretska in praktična znanja bo lahko študent uporabil pri reševanju praktičnih in teoretskih problemov (študij in praksa).

Prenosljive spretnosti

Potrebno je predznanje predmetov:

#### Intended learning outcomes:

Knowledge and Comprehension

Students should acquire basic theoretical knowledge and practical skills that are necessary for the preparation, organization and management of emergency response procedures. They will learn so emergency procedures, standard operating procedures and methods of management and decision-making processes.

Application

Students will learn the fundamental basics in the field of protection and rescue actions.

Analysis

The student in solving practical and theoretical problems (study and practice) will use theoretical and practical knowledge.

Skill-transference Ability

**Prerequisites:**

Študent oz. kandidat mora imeti predmet opredeljen kot študijsko obveznost.

The course has to be assigned to the student.

**Vsebina:**

Magistrsko delo se opravlja iz področja tehniške varnosti. Vsebina in naslov se določata v soglasju z izbranim mentorjem. Mentor je lahko učitelj na UL FKKT [t.j. zaposleni na fakulteti na učiteljskem delovnem mestu ali zaposleni na fakulteti na delovnem mestu asistenta, ki ima učiteljski naziv (docent, izredni ali redni profesor) ali nosilec predmeta na študijskem programu 1. ali 2. stopnje UL FKKT, ki ni zaposlen na fakulteti]. Mentor je praviloma učitelj na programu, ki ga je študent vpisal.

**Content (Syllabus outline):**

Master thesis should be made from the field of technical safety. The subject and title are chosen in accordance with the advisor. Advisor can be professor from faculty on UL FKKT [employed by the faculty on work place as a professor or assistant, who has teaching habilitation (assistant professor, associate professor or full professor)]. Adviser is as a rule teacher in a programme selected by the student.

**Temeljna literatura in viri/Readings:**

Knjige in članki, ki so povezani z vsebino magistrskega dela.

**Cilji in kompetence:**

**Objectives and competences:**

|  |   |
|--|---|
| Dokončno oblikovanje pričakovanega lika magistranta. Študent bodo ob izdelavi magistrske naloge pokazal sposobnosti iskanja in zaznavanja problemov varstva pri delu, požarne varnosti ali okoljske varnosti in znal poiskati rešitev za tak problem. Pri delu bodo pokazal, da je pridobil večino kompetenc navedenih v programu študija. | Final formulation of the expected master of science knowledge. Student will show during the master thesis work capability to sensing and solving of the safety at work, fire safety and environmental safety problems. During work he will exhibit that he attained most of the competences described in the programme. |
|--|---|

#### Predvideni študijski rezultati:

|   |
|---|

### **Cilji in kompetence:**

Cilj predmeta je študentom razvijati zavest o pomenu projektnega managementa v gospodarskih družbah, razvijati zmožnosti za timsko delo v podjetjih, razvijati sposobnosti za presojo poslovnih priložnosti, naučiti obvladovati metode in tehnike projektnega managementa ter pridobiti zmožnosti za samostojno vodenje.

Študentje si pri predmetu pridobijo naslednje specifične kompetence:

- vključevanje v poslovni proces
- sistematičnost pristopa k načrtovanju poslovanja v podjetju
- uporaba orodij za presojo uspešnosti projektnega managementa
- sistematični pristop k ustvarjanju, pridobivanju in prenosu znanja v prakso
- usposobljenost za samostojno izdelavo projektov, njihovo vrednotenje, presojo uspešnosti uvajanja v prakso
- usposobljenost za management projektov

### **Objectives and competences:**

The objective of the course is to develop an awareness of the importance of project management in companies, to develop the capacity for teamwork in companies, to develop capacity to assess business opportunities, to learn to use the project management methods and techniques, and obtain the capacity for independently management.

Students will gain the following specific competences:

- the integration into the business process
- a systematic approach to business planning in the company
- the usage of tools to assess the effectiveness of project management
- a systematic approach for the creation, acquisition and transfer of the knowledge into the practice
- the ability to independently create projects, evaluate them, and assess of the successful introduction into practice
- ability to manage projects

### Predvideni študijski rezultati:

Znanje in razumevanje

Študentje bodo spoznali in razumeli:

- pojme s področja ekonomija, podjetništvo, projektni management in organiziranje dela, v projektnih skupinah, vodenje projektnih timov,
- osnovne zakonitosti projektnega managementa ter organizacije dela v gospodarskih družbah, s poudarkom na primerih iz prakse kakor tudi iz študentovih življenjskih potreb ter izkušenj

Uporaba

Predmet je usmerjen v razumevanje in prepoznavanje značilnosti projektnih podvigov v različnih fazah rasti, analizi podatkov in informacij za management projektov, izdelavi poslovnega načrta za presojo izbrane poslovne ideje, v načrtovanje organizacije enostavnejših in manj zahtevnih projektov, določitev matrike odgovornosti, načrtovanju časa, virov sredstev, dela, stroškov, ozkih grl, analizi in učinkovitosti projektov.

Refleksija

Študentje bodo interpretirali ter pred kolegi analizirali lastno razumevanje projektnega dela, izbranih zahtevnih ter manj zahtevnih projektov s področja kemijske stroke. Pri tem bodo uporabili pridobljena teoretična znanja ter jih vrednotili s predstavljenimi praktičnimi problemi oziroma izkušnjami.

Prenosljive spretnosti

Pri predmetu bo študent pridobil sposobnosti razumevanja projektnega dela, dela v skupinah, pomena projektnega managementa za uspešen management poslovnega procesa v gospodarskih družbah ter v zavodih, za razumevanje strokovne literature. Pridobljene spretnosti bodo študentje znali uporabljati pri organizaciji timskega dela.

### Intended learning outcomes:

Knowledge and Comprehension

Students will learn and understand:

- terms from economics, entrepreneurship, project management and work organization, project teams,

basic principles of project management and work organization in companies with emphasis on case studies and the student needs and experiences

Application

The course is focused on understanding and identifying the characteristics of projects in various stages of growth, data analysis and information for project management, preparing the business plan for the assessment of selected business ideas, in the organization planning of simpler and less complex projects, the determination of the responsibility matrix, the planning of time, resources, work, costs, bottlenecks, the analyses and the efficiency of projects.

Analysis

Students will interpret colleagues their own understanding of project work, selected demanding and less demanding projects in the field of chemistry. In this they will use the acquired knowledge and will evaluate them with the presented practical problems or experiences.

Skill-transference Ability

Student will acquire skills for understanding of project work, work in teams, the importance of project management for the successful management of the business process in companies and institutions, for understanding the scientific literature. Students will be able to use the acquired skills for the organization of teamwork.

### Metode poučevanja in učenja:

Predavanja s pomočjo različnih AV sredstev.

Študentom podamo uvod v obravnavano snov, jih napotimo na obravnavo uspešno rešenih projektov v praksi, tudi s pomočjo strokovnjakov iz prakse.

Izdelava poslovnega načrta za primer iz kemijske stroke, skupinska obravnava dobljenih rezultatov.

### Learning and teaching methods:

Lectures with AV. We give students an introduction of the topic, assign them to deal the successfully solved projects from practice, also with the help of practitioners.

Creating a business plan for the chemistry case, group discussion of the obtained results.

### Načini ocenjevanja:

### Delež/Weight

### Assessment:

|                  |         |              |
|------------------|---------|--------------|
| Pisni izpit      | 70,00 % | Written exam |
| Projektna naloga | 30,00 % | Project work |

**Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:**

**Prerequisites:**

|   |   |
|---|---|
| Študent oz. kandidat mora imeti predmet opredeljen kot študijsko obveznost. | The course has to be assigned to the student. |
|---|---|

**Vsebina:**

Numerične metode v raziskovalnem delu:

- Reševanje navadnih diferencialnih enačb z aplikacijami v varnosti in požarni varnosti (Eulerjeva metoda, Metoda Runge-Kutta)
- Fourierova vrsta
- Transportna enačba (metoda končnih diferenc), reševanje problema prenosa toplote pri požarih
- Metode s slučajnim izborom podatkov. Monte Carlo metode.

Statistične metode v raziskovalnem delu:

- Regresija
- Tehnike za enostransko analizo variance (ANOVA)
- ANOVA za modele in različne zasnove
- Analiza kovariance
- Multipla regresija in korelacijske

Strukturni modeli enačb

**Content (Syllabus outline):**

Numerical methods in research work:

- Solving ordinary differential equations with applications in safety and fire safety (Euler's method, Runge-Kutta method)
- Fourier series
- The transport equation (finite difference method), solving the problem of heat transfer in fires
- Methods for a randomized data. Monte Carlo methods.

Statistical methods in research work:

- Regression
- Techniques for one-sided analysis of variance (ANOVA)
- ANOVA models for various design
- Analysis of covariance
- Multiple regression and correlation

**Temeljna literatura in viri/Readings:**

Glavna literatura:

- S. Dowdy, S. Wearden, D. Chilko: Statistics for Research, Third edition, Wiley, New Jersey, 2004, str. 211-511

- K. Atkinson, W. Han: Elementary Numerical Analysis, Third edition, Wiley, New York, 2004 str. 368-491

Dopolnilna literatura:

- P. I. Good, J. W. Hardin, Common Errors in Statistics, Wiley, 2003, str. 127-217
- K. W. Morton, D. F. Mayers, Numerical Solution of Partial Differential Equations, Cambridge UP, 2005, 273 str.
- Dopolnilna literatura: REŠČIČ, Jurij, URBIČ, Tomaž. Numerične metode – praktikum. 1. izd. Ljubljana: Fakulteta za kemijo in kemijsko tehnologijo, 2015.

**Cilji in kompetence:**

Študentje bodo spoznali matematične in statistične metode, ki jih je mogoče uporabiti pri strokovnem in raziskovalnem delu na področju varnosti in pridobivali sposobnosti za uporabo teh metod.

**Objectives and competences:**

Students will learn mathematical and statistical methods that can be used in professional and research work in the field of safety and acquire the ability to use these methods.

**Predvideni študijski rezultati:**

Znanje in razumevanje

Študentje naj bi pridobili specialna znanja iz področja numeričnih metod in statistike, ki so potrebna za razvoj in reševanje modelov iz področja varnosti.

Uporaba

Metode, ki jih bodo študentje spoznali, so orodja za raziskave in preverjanje realnih situacij v varnostni in tehniški praksi.

Refleksija

Vsebine navajajo študenta k razmišljanju o pomenu računanja o nedosegljivosti eksaktnih rezultatov in o natančnosti rešitev v tehniki.

Prenosljive spremnosti

Logično razmišljanje in logično povezovanje informacij iz prakse s teoretičnimi modeli in prenos teoretičnih rešitev v praks.

**Intended learning outcomes:**

Knowledge and Comprehension

Students should gain special knowledge in the field of numerical methods and statistics that are needed to develop and solve models in the field of safety.

Application

The methods used by the students will learn the tools for research and verification of real situations in the safety and technical practice.

Analysis

Contents indicate the student to think about the importance of calculating the unavailability of exact results and the accuracy of the solution in engineering.

Skill-transference Ability

Logical thinking and logical linking of information from practice with theoretical models and theoretical transfer the solution into practice.

**Metode poučevanja in učenja:**

Predavanje

Seminari

**Learning and teaching methods:**

Lectures

Seminar

**Načini ocenjevanja:**

Pisni izpit.

**Delež/Weight**

Assessment:

Written exam

| <b>Vsebina:</b><br>Evropska in slovenska zakonodaja na področju voda, zraka, tal, odpadkov. Zakonodaja na področju okolju prijaznih tehnologij, okoljski ISO standardi, IPPC smernica. Seveso smernice. Veliki industrijski sistemi. Okoljska tveganja ter metodologije za identifikacijo in vrednotenje okoljskih tveganj. Ocenjevanje življenjskih ciklov procesov, okoljska tveganja povezana z zelenimi tehnologijami. Okoljske nezgode in njihove posledice ter možnosti sanacij. Lokalni, regionalni in globalni problemi stanja okolja. Scenariji in primeri okoljskih nezgod. Tveganje posameznika in skupinsko tveganje, obvladovanje tveganj. Obstojeca računalniška orodja in njihova uporaba. Izdelava varnostnih poročil, interpretacija rezultatov varnostnih analiz, upravljanje z okoljskimi tveganji. | <b>Content (Syllabus outline):</b><br>European and Slovene legislation for water, air, soil pollution and solid wastes. Legislation in the field of environmental friendly technologies, environmental ISO standards, IPPC Directive, Seveso directives. Large industrial systems. Environmental risks and methodologies for identification of environmental risks. Assessment of environmental risk of green technologies. Environmental accidents, their consequences and mitigation possibilities. Local, regional and global environmental problems. Scenarios of environmental accidents, case studies of environmental accidents. Assessing risk of individuals and group. Computer tools and their application. Safety reports, interpretation of the results of safety analyses, management of environmental risks. |
|--|---|

**Temeljna literatura in viri/Readings:**

Lerche, I; Glaesser, W.: Environmental Risk Assessment: Quantitative measures, anthropogenic influences, human impact, Springer, 2006, 341 str. (40%)  
 AIChE: Guidelines for Technical Management of Chemical Process Safety, New York 1989 (10%).  
 Sutton, I: Process Reliability and Risk Management, Van Nostrand New York, 1992 (10%).

### Cilji in kompetence:

Študentje naj bi spoznali, kako zbrati informacije o okoljskih tveganjih ter kako te informacije lahko koristijo pri načrtovanju preventivnih ukrepov za zagotavljanje varnosti v okolju in kako lahko s pomočjo vedenja o okoljskih tveganjih lahko načrtujemo svoje dejavnosti, da bodo varne in tudi prijazne do okolja ter da bodo ob morebitnih okoljskih nezgodah posledice čim manjše.

### Objectives and competences:

Students should learn how to gather information on environmental risks and how this information can be useful in planning preventive measures to ensure the safety of the environment and how you can use knowledge about environmental risks can plan their activities to a safe and friendly environment and to will be minimized the potential environmental consequences of accidents.

### Predvideni študijski rezultati:

Znanje in razumevanje  
 Študentje naj bi pridobil osnovna teoretska in praktična znanja, ki so potrebna za razumevanje okoljskih problemov in tveganj, ki so z njimi povezana. Razumel bo kako so posamezni elementi tveganj vpeti v odločitveni proces glede tehnoloških pristopov k okoljskim tveganjem.  
 Uporaba  
 Znal bo uporabljati tako zakonodajo kot tudi teoretične in praktične pristope k reševanju problemov okoljskih tveganj in se na njihovi osnovi odločati o obrambnih in blažilnih mehanizmih, ki se jih za konkreten primer uporabi.  
 Refleksija  
 Teoretska in praktična znanja bo lahko študent uporabil pri reševanju praktičnih in teoretskih problemov. Spoznanja o zmogljivostih in omejitvah metod za oceno okoljskih tveganja ter kritično uporabo numeričnih modelov za oceno okoljskih posledic za dobro odločanje.  
 Prenosljive spremnosti  
 Študent bo pridobil analitične spremnosti in logično razmišljanje kot tudi spremnosti za učinkovito identifikacijo nezgodnih

### Intended learning outcomes:

Knowledge and Comprehension  
 Students should acquire basic theoretical and practical knowledge necessary for understanding environmental problems and risks that are associated with them. They will understand how the individual elements of risk embedded in the decision-making process with respect to technological approaches to environmental risks.  
 Application  
 He will be able to use both the law as well as theoretical and practical approaches to solving the problems of environmental risks and to decide based on their defense and mitigation mechanisms, which are for the specific application.  
 Analysis  
 The student in solving practical and theoretical problems will use theoretical and practical knowledge. Knowledge of the capabilities and limitations of methods to assess environmental risks and critical use of numerical models to assess the environmental consequences of good decision-making.  
 Skill-transference Ability  
 Students will gain analytical skills and logical thinking as well as skills for effective identification of accident scenarios.

### Metode poučevanja in učenja:

Predavanja  
 Seminarske vaje  
 Seminarska naloga s področja okoljskih tveganj

### Learning and teaching methods:

Lectures  
 Tutorials  
 Coursework in the field of environmental risks

### Načini ocenjevanja:

|                   | Delež/Weight | Assessment:  |

**Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:**

Študent oz. kandidat mora imeti predmet opredeljen kot študijsko obveznost.

**Prerequisites:**

The course has to be assigned to the student.

### Vsebina:

Aktivna in pasivna požarna zaščita  
 Ukrepi za preprečevanje širjenja požara po objektu  
 Obnašanje materialov in konstrukcij ob požaru  
 Izbor požarnih scenarijev, napoved razvoja požara po fazah.  
 Izbor in izračun projektnih požarov  
 Ocena požarne nevarnosti  
 Izdelava koncepta požarne varnosti  
 Način projektiranja požarne varnosti s klasičnimi in alternativnimi predpisi  
 Postopek projektiranja požarne varnosti s požarnovarnostnim inženirstvom  
 Analiza rezultatov izračunov projektnih požarov  
 Metode požarnovarnostnega inženirstva  
 Uporaba računalniških programov v požarnem projektiranju.

### Content (Syllabus outline):

Active and passive fire protection  
 Measures to prevent the spread of fire by the building  
 Behaviour of materials and structures during fire  
 Selection of fire scenarios, forecast the development of a fire in stages.  
 Selection and calculation of design fires  
 Assessment of the fire hazard  
 A concept of fire safety  
 Method of fire safety design with traditional and alternative regulations  
 The process of designing fire safety with fire safety engineering  
 Analysis of the results of calculations of project fires  
 Methods of fire protection engineering  
 The use of computer programs in fire design.  
 Tutorial:

|  |   |
|--|---|
| Vsebina vaj:   | Calculation of design fire load   |
| Račun požarne obtežba  | Development of fire in fire compartment with help of one and two zone models (software)                     |
| Račun razvoja požara v prostoru, uporaba enoconskih in dvoconskih modelov (računalniški program)   | Simulations of evacuations  |
| Simulacije evakuacije  | Development of fire assessment for simple building, choose the appropriate passive and active fire measures |
| Izdelava koncepta požarne varnosti za enostaven objekt, izbira ustrezne pasivne in aktivne zaščite |   |

- Tehnična smernica TSG - 1 - 001: 2010. Požarna varnost v stavbah. Ministrstvo za okolje in prostor: 60 str Smernice SZPV

#### **Cilji in kompetence:**

Pri predmetu bodo študenti spoznali več načinov načrtovanja požarne varnosti v objektu, postopke za izdelavo ocene požarne varnosti ter metode za ovrednotenje ustreznegata koncepta požarne varnosti. Predmet je zastavljen tako, da sledi sodobnim trendom razvoja požarnega inženiringa in tako ponuja študentom spoznavanje in delo z nekaterimi uveljavljenimi požarnimi računalniškimi modeli ter postopki za napovedi razvoja požara v prostoru nastanka požara.

#### **Objectives and competences:**

In this course students will learn several ways to design fire safety in the facility, procedures for assessment of fire safety and the proper methods to evaluate the concept of fire safety. The course is designed in a way that follows the modern trends in the development of fire engineering and also offers students learn about and work with some of the established fire computer models and procedures for the prediction of fire in the room of origin.

#### **Predvideni študijski rezultati:**

##### Znanje in razumevanje

Študentje naj bi pridobil osnovna teoretska in praktična znanja, ki so potrebna za razumevanje različnih postopkov, ki jih inženir, ki se ukvarja s požarno varnostjo nujno potrebuje pri vsakodnevnih odločitvah.

##### Uporaba

Študentje bodo spoznali tako osnovna znanja na področju teorije gorenja in gašenja, metode za oceno požarnih nevarnosti ter izdelavo koncepta požarne varnosti in temeljne inženirske metode (matematične modele, enostavne računske metode in računalniške modele), ki jih inženir pri svojem delu potrebuje za načrtovanje požarne varnosti v objektu.

#### **Intended learning outcomes:**

##### Knowledge and Comprehension

Students should acquire basic theoretical knowledge and practical skills that are needed to understand the various processes by an engineer who deals with fire safety indispensable for daily decisions.

##### Application

Students will also learn basic skills in the theory of burning and extinguishing methods for assessing fire hazards and making the concept of fire safety and basic engineering methods (mathematical models, numerical methods and computer models) by an engineer in his work requires planning for fire safety the facility.

##### Analysis

|                          |                      |
|--------------------------|----------------------|
| <b>Jeziki/Languages:</b> | Predavanja/Lectures: |
|                          | Vaje/Tutorial:       |

**Pogoji za vključitev v delo oz. za opravljanje  
študijskih obveznosti:**

Študent oz. kandidat mora imeti predmet opredeljen kot študijsko obveznost.

**Prerequisites:**

The course has to be assigned to the student.

| <b>Vsebina:</b>  | <b>Content (Syllabus outline):</b>  |

#### Cilji in kompetence:

Predmet je namenjen poglabljanju znanj o dinamiki požara ter teoriji gorenja. V sklopu predmeta je zajeto delo v laboratoriju, izvedba analiz posameznih materialov ter njihovega obnašanja med gorenjem. Študenti spoznajo praktične metode izvajanja meritev na področju požarnega inženiringa ter se srečajo predvsem z stožčastim kalorimetrom.

#### Objectives and competences:

The course is intended for deepening knowledge about fire dynamics and combustion theory. Students work in laboratories, carry out analyses of different materials and study their behaviour during burning and learn different practical measurement methods related to fire engineering, and learn how to use cone calorimeter.

#### Predvideni študijski rezultati:

##### Znanje in razumevanje

Študentje naj bi razširil osnovna teoretska in praktična znanja. Prav tako bodo sposobni kritično

#### Intended learning outcomes:

##### Knowledge and Comprehension

Students should upgrade basic theoretical and practical knowledge. They will also be able to

presoditi zmogljivosti nekaterih standardnih metod, jih ovrednotiti in interpretirati.

### Uporaba

Požarni praktikum je usmerjen v reševanje praktičnih problemov, ki so nujni tako pri snovanju novih učinkovin, kot tudi pri njihovi uporabi. Pri predmetu naj bi študentje pridobili znanja, ki jim omogočajo izvedbo temeljnih požarnih preizkusov. Poleg fizikalno-kemijskih osnov, ki so osnova razumevanje teorije gorenja pri požarnem preizkuusu bodo študenti pridobili tudi praktična znanja, ki so potrebna pri zasnovi in izvedbi meritev ter interpretaciji podatkov in dobljenih rezultatov. Pomemben vidik predmeta je predstaviti študentu kritičen pogled na podajanje rezultatov in zmogljivosti različnih preizkusnih postopkov.

### Refleksija

Teoretska in praktična znanja bo lahko študent uporabil pri reševanju praktičnih in teoretskih problemov (študij in praksa). Spoznanja o zmogljivostih in omejitvah posameznih metod v praksi pomenijo osnovo za mnoge obdelati ter primerno interpretirati.

### Prenosljive spretnosti

Pri predmetu bo študent pridobil laboratorijske spretnosti, znal bo uporabljati podatke, izvajati nekatere fizikalne meritve, eksperimentalne podatke bo znal ustrezno obdelati ter primerno interpretirati.

critically estimate the performance of some standard methods, evaluate and interpret them.

### Application

Fire practicum is focused on solving practical problems, important in design of new materials as well as in their use. In this course students should acquire skills that enable them to perform basic fire tests. In addition to the physico-chemical properties, which are base for understanding fire theory during fire-test performance, students will also gain practical skills. The latter is needed for setting-up and performing measurement, for data evaluation and interpretation of the results. An important aspect is to present a critical view on the interpretation of results and performance of different testing procedures.

### Analysis

Theoretical and practical skills can be used to solve practical and theoretical problems (study and practice). Awareness about capabilities and limits of individual methods in practice is the basis for many important decisions.

### Skill-transference Ability

In this course, students will gain laboratory skills will be able to use data, perform some physical measurements, will be able to manipulate with experimental data and interpret them in a right way

### Metode poučevanja in učenja:

Laboratorijske vaje

### Learning and teaching methods:

Laboratory practice.

### Načini ocenjevanja:

Izpit pisni in ustni. Ocene: 6-10 pozitivno  
Vaje: Opravljen kolokvij Pri vajah predstavlja delež ocene tudi uspešno laboratorijsko delo.

### Delež/Weight

### Assessment:

Written and oral exam. Positive grades from 6 - 10 Practice: completed colloquium. Part of the final grade is also laboratory work.

#### Cilji in kompetence:

Cilji:  
Podati osnovne ugotovitve o nastanku, razvoju in poteku požarov v zgradbah in naravnem okolju. Seznaniti študente z modeli požarne obtežbe skladno z Evrokodom EN 1991-1-2 in z ukrepi aktivne in pasivne požarne zaštite. Privzgojiti občutek za pomen ukrepov požarne zaštite v luči socioloških, naselitvenih, ekonomskih in drugih faktorjev. Povezati znanja iz drugih predmetov s požarnimi problemi, varnost sistemov. Vpeljati osnovna načela požarno varnega projektiranja lesenih, armiranobetonskih in jeklenih konstrukcij. Spoznavanje vpliva izvedenih požarnovarnostnih ukrepov na objekte. Analiza izvedenih požarnih ukrepov in pomenu le teh na varnost uporabnikov objekta in objekt v celoti.

#### Pridobljene kompetence:

- Sposobnost ocene požarne ogroženosti objekta ter načrtovanja ukrepov požarne zaščite.

#### Objectives and competences:

Objectives:  
To provide the basic findings on the growth, development and the progress of fires in buildings and natural environment. To familiarize students with models of fire load in accordance with EN 1991-1-2 standard and measures of active and passive fire protection. To impart a sense of the importance of fire safety measures in the light of sociological, urban, economic and other factors. Relate knowledge from other courses with fire problems and safety of the systems. To introduce the basic principles of fire safety design of timber, reinforced concrete and steel structures. Understanding of the impacts of fire-safety measures on structures. Analysis of fire measures and their role in personal safety of the users as well as the buildings.

Acquired competences:  
- Ability to determine fire safety assessment of the building and design of fire protection measures

|   |   |
|---|---|
| <ul style="list-style-type: none"> <li>- Sposobnost izbire primernega modela požarne obtežbe. Sposobnost uporabe poenostavljenih računskih metod za oceno požarne odpornosti enostavnih nosilnih konstrukcij.</li> <li>- Sposobnost izdelave</li> </ul> | <ul style="list-style-type: none"> <li>- Ability of selecting an appropriate fire load model. Ability to use the simplified calculation methods for assessment of the fire resistance of simple load-bearing structures.</li> <li>- Ability to design fire study for simple objects.</li> </ul> |
|---|---|

#### Predvideni študijski rezultati:

Znanje in razumevanje

Razumevanje pomena požarnega inženirstva.

Razumevanje fizikalnih osnov nastanka in razvoja požara ter vpliva visokih temperatur na materiale in konstrukcije.

Znanje osnovnih metod in ukrepov aktivne in pasivne požarne zaščite.

Uporaba

Uporaba pridobljenega znanja pri pripravi magistrskega dela in pri samostojnem ali skupinskem reševanju požarnih problemov na delovnem mestu v praksi.

Refleksija

Povezava pridobljenega znanja z različnih področij naravoslovja in tehnike s problemi požarnega inženirstva. Kritično ovrednotenje računskih modelov in poenostavitev v okviru standardov in predpisov.

Prenosljive spremnosti

Uporaba domače in tujje literature ter evropskih standardov in predpisov s področja požarnega inženirstva.

Pridobivanje podatkov s svetovnega spletja, uporaba domačih in tujih baz podatkov. Izdelava in uporaba preprostih računalniških orodij za reševanje požarnih problemov.

Uporaba razpoložljive programske opreme.

#### Intended learning outcomes:

Knowledge and Comprehension

Understanding the importance of fire safety engineering. Understanding the physical basis of the growth and evolution of fire and impact of high temperatures on materials and structures.

Knowledge of basic methods and measures of active and passive fire protection.

Application

Using the knowledge gained at this course in the preparation of the master's work and when solving practical fire issue problems individually or in a group in practice.

Analysis

Link acquired knowledge from different fields of science and technology with the problems of fire engineering. Critical evaluation of computational models and simplification in the context of standards and regulations.

Skill-transference Ability

Use of a domestic and foreign literature and European standards and regulations in the field of fire engineering.

Obtaining information from the World Wide Web, the use of domestic and foreign databases.

Development and use of simple computational tools for solving fire problems.

Usage of the available software.

|---|--|

|   |   |
|---|---|
| <b>Vsebina:</b><br>Onesnaženje: vrste in viri onesnaženja, mehanizmi transporta, pretvorb in vplivi v okolju (voda, zrak, tla).<br><br>Čiščenje onesnaženja: sodobni postopki in smeri razvoja pri čiščenju odpadnih vod, pregled konvencionalnih (koagulacija, flokulacija, adsorpcija, biološko čiščenje) in naprednih (oksidacijski procesi, katalitske in membranske tehnike) čistilnih naprav za čiščenje odpadnih vod, postopki in pregled čistilnih naprav za zrak (usedalniki, cikloni, elektrostatski precipitatorji, adsorberji, katalitski procesi), procesi remediacije in bioremediacije za čiščenje onesnaženih tal in podtalnice, tehnološki/ekonomski vzvodi vodenja in nadzora čistilnih naprav/procesov, postopki optimizacije. | <b>Content (Syllabus outline):</b><br>Pollution: Types and sources, mechanisms of transport, environmental fate and impacts (water, soil, air).<br><br>Pollution reduction: overview of up-to-date processes and methods of wastewater treatment, review of conventional (coagulation, flocculation, adsorption, biological treatment) and advanced (oxidation processes, catalytic, membrane techniques) wastewater treatment systems, processes and treatment devices for air pollution control (settling chambers, cyclones, electrostatic precipitators, scrubbers, adsorbers, catalytic combustion). Remediation and bioremediation processes (ground waters, contaminated soils). Proces controll, monitoring and optimization. |
|---|---|

Okolska ocena industrijskih procesov: politika in strategija varovanja okolja, dodatno in procesno integrirano varovanje okolja, IPPC (Integrated Pollution Prevention) direktiva, moderno upravljanje industrijskih izpustov, najboljša dostopna tehnologija BAT (Best Available Technology) - kombinacija objekta in okolja z optimalno in ekonomsko najbolj učinkovito kontrolo onesnaženja. Zakonodaja.

Zmanjševanje vplivov na okolje: načini ocenjevanja vplivov procesov na okolje, pregled globalnih problemov (vzroki, ekonomske in socialne posledice, perspektive, možne rešitve), ravnanje z odpadki in načini njihove predelave, odpadek kot surovina in emergent, koncept čistejše proizvodnje. Problematika fosilnih in obnovljivih virov energije.

Environmental Evaluation of Industrial Processes: policy and strategies of environmental protection, end-of-pipe measures and production-integrated environmental protection, IPPC Directive), the concepts of BAT (Best Available Technology processes, technical and economical measures to reduction of environmental impacts. Legislation.

Environmental Impact Reduction: environmental impact assessment approaches, global environmental problems (sources, consequences, perspectives, solutions), solid waste management and processing, waste as material and energy source, concepts of cleaner and sustainable technologies and production. Fossil and renewable sources of energy: drawbacks and benefits.

 D.T. Allen, D.R. Shonnard: Green Engineering: Environmentally Conscious Design of Chemical Processes , Prentice Hall, Englewood Cliffs, 2001, 552 pages.

#### **Cilji in kompetence:**

Pridobitev poglobljenih znanj, potrebnih za aplikativno inženirsko reševanje okoljskih problemov na področju celovitega  
 Znanje o načinu za identifikacijo in oceno škodljivih na okolje okolje, znanje za sodobno upravljanje industrijskih izpustov s kombinacijo ovrednotenja tehnologije, vpliva na okolje in ocene nevarnosti za okolje. Sposobnost integracije koncepta trajnostne zaščite okolja v proizvodne, ekonomske in vodstvene odločitve.

#### **Objectives and competences:**

Objectives: To acquire deep knowledge on engineering tools for solving complex environmental problems. Ability to understand and apply the principles of environmental management, science and engineering.

#### **Competences:**

Knowledge on identification and determination of hazardous environmental impact assessment.  
 Knowledge on complex management of industrial emissions and cost-effective processes which minimize pollution at a source, and/or reduce impact on health and the environment. Ability to understand integrated pollution prevention practices

#### **Predvideni študijski rezultati:**

Znanje in razumevanje  
 Samostojna uporaba inženirskih orodij in znanj za ekonomsko in družbeno sprejemljivo reševanje okoljskih problemov.  
 Uporaba

#### **Intended learning outcomes:**

Knowledge and Comprehension  
 Ability to apply engineering approach to solve various complex environmental problems in cost-effective manner with ethical responsibility within social context.  
 Application

**Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:**

Študent oz. kandidat mora imeti predmet opredeljen kot študijsko obveznost.

**Prerequisites:**

The course has to be assigned to the student.

**Vsebina:**

Típični industrijski procesi (znižana ali povisana temperatura in tlak, katalitski, elektrokatalitski procesi, elektrotermični). Analiza industrijskih procesov in priprava ocen tveganja. Zajemanje pomembnih in kritičnih parametrov ter pogojev procesa, ki vplivajo na njegovo varnost, možni scenariji izrednih dogodkov. Kvalitativna in kvantitativna ocena tveganja. Varnost pri delu v laboratoriju, kemijskih in drugih procesnih industrijah. Kompleksnost delovanja industrijskega procesa, tehnološki režim in standardni proizvodni postopki, ustrezne vzdrževanja posameznih naprav in celotnega sistema. Ocena verjetnosti za nastanek izrednih situacij v kemijskih procesih ter preprečevanje in ukrepanje. Identifikacija potencialnih nevarnosti v procesu, začetni dogodki, razvoj nezgodnih scenarijev.

**Content (Syllabus outline):**

Typical chemical and industrial processes (reduced or elevated temperature, high pressure, catalytic, electrocatalytic, and electrothermal processes). Analysis of industrial processes and the preparation of risk assessments. Determinations of important and critical process parameters and conditions that affect the security of the possible scenarios of emergencies. Qualitative and quantitative risk assessment. Safety, Health and Loss Prevention at work in a laboratory, chemical and other process industries. The complexity of the operation of industrial processes, technological regime and the standard manufacturing procedures, proper maintenance of individual devices and the entire system. Estimate the probability of accidents in chemical processes, prevention and response.

|   |  |
|---|--|

|---|--|

#### Temeljna literatura in viri/Readings:

- Hauptmanns, U.: Process and plant safety, Springer, cop. (Heidelberg [etc.]) 2015 665 str. (40 %)
- Brauer, R., L.: Safety and health for engineers, 3rd Ed., Wiley, cop. Hoboken (New Jersey), 2016 765 str. (30 %)
- Ogle, R. A.: Dust explosion dynamics, Elsevier : Butterworth-Heinemann, cop. 2017 (Oxford [etc.]) 639 str. (30 %)

#### Cilji in kompetence:

Pri predmetu se študenti seznanijo z zagotavljanjem varnosti pri delu v kemijskih ter procesnih industrijah. Pridobljeno znanje omogoča razumevanje in presojanje nevarnosti oziroma stopnje tveganja ter določitev ukrepov za varno in zdravo delo.

Študentje spoznajo, da je za varno delo v industriji osnovni pogoj natančno poznavanje vseh faz procesa in podrobna analiza delovanja na osnovi katere se izvede ocene tveganja. Spoznajo, da je varnost procesa pogojena z mnogo dejavniki in da je za njegovo varno obratovanje potrebno tako optimalno delovanje posameznih procesnih operacij kot tudi usklajeno delovanje sistema kot celote. Študentje se pri predmetu usposobijo za sistematičen pregled kemijskih in drugih sorodnih procesov, zaznavanje potencialnih kritičnih mest, priprave ocene tveganja in ukrepov za zmanjšanje tveganja.

#### Objectives and competences:

Students get knowledge to ensuring safety, health and loss prevention in chemical processes. The knowledge enables the students to understand and assess the level of danger or risk and to establish measures to ensure the safe handling of hazardous chemicals.

Students learn that basic conditions for safe work in industry are exact knowledge of all phases of the process and the importance of a risk assessment. Students learn that process safety depends on many factors. For safe operation is necessary to optimize the performance of individual part of the process operation as well as the system as a whole. Students are trained for a systematic review of chemical and other related processes, identify potential critical points, preparation of risk assessment and risk reduction measures.

#### Predvideni študijski rezultati:

Znanje in razumevanje  
Študentje se pri predmetu usposobijo za sistematičen pregled nevarnosti v kemijskih in sorodnih procesih, za zaznavanje potencialnih kritičnih mest, pripravo ocene tveganja in ukrepov za zmanjšanje tveganja.  
Uporaba

#### Intended learning outcomes:

Knowledge and Comprehension  
The subject makes students capable of a systematic review of the risks in the chemical and related processes for detecting potential critical points, risk assessment and risk reduction measures.  
Application

|   |   |
|---|---|
| Ocenjevanje tveganja kemijskih procesov. **Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:**

Študent oz. kandidat mora imeti predmet opredeljen kot študijsko obveznost.

**Prerequisites:**

The course has to be assigned to the student.

**Vsebina:**

**Predavanja:**

1. sklop: Uvod - pravni pojmi, mesto in vloga predmeta...Poklicne bolezni. Invalidnost. Poklicna rehabilitacija
2. sklop: Etične dileme v ocenjevanju delazmožnosti in verifikaciji poklicnih bolezni.
3. sklop: Analize delovnih mest z vidika poklicne izpostavljenosti, kvalitativne in kvantitativne metode..
4. sklop: Najpogosteje poklicne bolezni
5. Sklop: Epidemiologija delovnega okolja.

**Seminarji:** področje patologije dela. Vsak študent pripravi seminar določene dolžine in določenega števila literturnih virov, ga odda v pisni obliki ter predstavi študentom

**Content (Syllabus outline):**

Lectures:  
 Section 1: Introduction – legal concepts, context and role of the subject ... Occupational diseases.  
 Disability. Occupational rehabilitation.  
 Section 2: Ethic dilemmas in working ability assessment and verification of occupational diseases.  
 Section 3: Workplace analysis regarding occupational exposure using qualitative and quantitative methods.  
 Section 4: Common occupational diseases.  
 Section 5: Epidemiology of the workplace.

**Seminars:**

In the field of labor pathology. Every student writes a paper with the specified number of words and number of references, turns it in in writing and gives a presentation to other students.

3. Rom WN, Markowitz SB, eds. Environmental and occupational medicine. 4th ed. Philadelphia, Baltimore, New York, London, Buenos Aires, Hong Kong, Sydney, Tokyo: Wolters Kluwer, Lippincott Williams&Wilkins, 2007 (20%)
4. Rosenstock I, Cullen MR, Brodkin CA, Redlich CA, eds. Textbook of Clinical Occupational and Environmental Medicine. 2nd ed. Philadelphia, Edinburgh, London, New York, St Luis, Sydney, Toronto: Elsevier Saunders; 2005 (20%)

### Cilji in kompetence:

Študent spozna:

- oblike in metode ter načine proučevanj tveganj na delu (obremenitve in škodljivosti);
- oblike, metode in načine jemanja delovne anamneze;
- oblike, metode in načine ocenjevanja izpostavljenosti – kvalitativne in kvantitativne metode (kumulativna izpostavljenost);
- epidemiološke metode v medicini dela
- vplive delovnega okolja na zmogljivosti posameznih organov in organskih sistemov ter človeka kot celote;
- vplive delovnega okolja na zdravje in delazmožnost (zdravstveni, pravno-upravni, tehnični, organizacijski vidik);
- obremenitve (ekološki monitoring) in zgodnje učinke obremenjenosti na zdravje in delazmožnost (biološki monitoring);
- vplive delovnega okolja na specifične kazalce negativnega zdravja posameznika ali skupine poklicne bolezni in boleznim povezane z delom (epidemiološki monitoring);
- osnove humanizacije dela oziroma ergonomije v najširšem smislu;
- osnove promocije zdravja v delovnem okolju;

### Objectives and competences:

The student will familiarize himself with:

- forms, methods and procedures used to research risks present at the workplace (causes of strain and harm);
- forms, methods and procedures of taking occupational medical history;
- forms, methods and procedures of exposure assessment – qualitative and quantitative methods (cumulative exposure);
- epidemiologic methods in occupational medicine;
- effects of the workplace on the capacity of individual organs and organ systems, as well as of the person as a whole;
- effects of the workplace on health and ability to work (medical, legal-administrative, technical and organizational aspects);
- types of strain (ecological monitoring) and early effects of stress on health and ability to work (biomonitoring);
- effects of the workplace on specific negative health indicators of groups and individuals;
- occupational and work-related diseases (epidemiological monitoring);
- basics of the humanization of labor or ergonomics in its broadest sense;
- basics of health promotion at the workplace.

### Predvideni študijski rezultati:

Znanje in razumevanje

- praktične in teoretične oblike analiz delovnega okolja z zdravstvenega vidika;
- principe in postopke preprečevanja poklicnih tveganj v delovnem okolju;
- osvoji vrednotenje ekološkega in biološkega monitoringa ter principe epidemiologije delovnega okolja;

### Intended learning outcomes:

Intended Learning Outcomes:

Knowledge and Comprehension

- practical and theoretical forms of workplace analysis from the medical perspective;
- principles and procedures of work-related risk mitigation at the workplace;

**Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:**

Študent oz. kandidat mora imeti predmet opredeljen kot študijsko obveznost.

**Prerequisites:**

The course has to be assigned to the student.

**Vsebina:**

- UVOD in zahteve za varnost kemijsko-procesnih sistemov
- Koncept analiz varnosti in ranljivosti (SVA analize)
  - Definicija metode SVA (
  - Protokol in upravljanje s tveganji, varnosti in varovanja
  - Kriteriji SVA in pripadajoče utemeljitve
  - Kriteriji analiz varnosti in ranljivosti
  - Postopki nadziranja podjetij
  - Inspekcija postopkov analiz ranljivosti
- Upravljanje varnosti kemijsko-procesnih sistemov
  - Integracija varovanja kemijsko-procesnih sistemov in aktivnosti SVA z obstoječimi okoljskimi, zdravstvenimi in varnostnimi programi

**Content (Syllabus outline):**

- Introduction and demands for chemical process systems
- Concept of safety and vulnerability analysis
  - Definition of SVA methodology
  - Counter measures and Risk management safety and security
  - SVA criteria and associated rationale
  - Criteria for security and vulnerability
  - Procedures for company monitoring
  - Review of procedures of the vulnerability analysis
- Management of chemical and process systems
  - Integration of protection chemical-process systems and SVA activities with existing environmental, health and safety programs
  - Following SVA recommendations and revalidation of SVA analyses

|  |  |
|--|--|
| <ul style="list-style-type: none"> <li>• Sledenje priporočil SVA in revalidacija analiz SV</li> <li>• Povezave med varnostjo nevarnih snovi v fiksni sistemih in med transportom</li> </ul> <p>4. #### Cilji in kompetence:

Program predmeta usmerja študenta v kritično in logično presojo varnosti in ranljivosti posameznih sistemov v povezavi z vsemi napravami ter zahtevami. Študenti se usposabljamjo za določanje pomembnosti posameznih komponent sistemov v smislu varnosti in stroškov za vzdrževanje načrtovanega nivoja varnosti.

#### Objectives and competences:

Program of the course leads student to critical and logical assessment of safety and vulnerability in connection with all of devices and demands. Students are being thought for importance assessment od system components in sense of safety and maintenance costs.

**Predvideni študijski rezultati:**

Znanje in razumevanje  
Teoretična znanja o zanesljivosti sistemov v povezavi s tveganjem. Razumevanje vplivnih pojavov na odpovedi sistemov in na nezgodne procese ob upoštevanju obnašanja človeka.  
Uporaba  
Varno in učinkovito uporabljanje z inženirskimi sistemi z namenom zmanjševati tveganje oz. upravljanje s tveganjem ob spremljanju predpisov.  
Refleksija  
Interpretacija izrednih stanj sistemov v prometu (procesna industrija, ladje, terminali, pristanišča, skladišča itd.). Iznajdljivost v mednarodnem prostoru in komunikacija z nadrejenimi upravnimi organi.  
Prenosljive spretnosti  
S pridobljenim temeljnim znanjem in večino uporabe domače in tujte tehnične literature, priročnikov ter standardov, pa tudi računalniških modelov pridobi študent zmožnost razumevanja in delnega obvladovanja sistemov.  
POMEMBNO je razumevanje tveganja, načini zmanjševanja tveganja ob upoštevanju stroškov, ki pri tem nastajajo.

**Intended learning outcomes:**

Knowledge and Comprehension  
Theoretical knowledge about reliability of the systems in connection with risk. Understanding important phenomena on the risk of the systems and on accident processes by taking into account human behaviour.  
Application  
Safe and efficient management of engineering systems with aim to reduce risk or risk management in accordance with legislation  
Analysis  
Interpretation of incident events of the systems in transportation (process industry, ships, terminals, ports warehouses etc). Inventiveness on international level and communication with superior legislative bodies.  
Skill-transference Ability  
With gathered basic knowledge and skill to use domestic and foreign literature, handbooks and standards, as well as computer models student gets ability to understand and partially managing systems. Important is understanding the risks, reducing the risks by taking into account the costs the arise during the process.

**Metode poučevanja in učenja:**

Na predavanjih pridobi študent temeljna teoretična znanja. S seminarsko nalogo samostojno pod mentorstvom visokošolskega učitelja rešuje problematiko teh sistemov v obliki seminarske ali projektne naloge.

**Learning and teaching methods:**

Through the lectures student gather basic theoretical knowledge. With seminar work he solves problems of seminar or project work under supervision of professor.

**Načini ocenjevanja:**

|                        | <b>Delež/Weight</b> | <b>Assessment:</b> |
|------------------------|---------------------|--------------------|
| A) Seminarska naloga   | 40,00 %             | A) Seminar work    |

**Pogoji za vključitev v delo oz. za opravljanje  
študijskih obveznosti:**

Študent oz. kandidat mora imeti predmet opredeljen kot študijsko obveznost.

**Prerequisites:**

The course has to be assigned to the student.

**Vsebina:**

Raziskovalno delo mora biti s področja biokemije. Vsebino in naslov soglasno določita študent in izbrani mentor. Študent bo začel z eksperimentalnim delom, vpeljal metode in opravil preliminarne poskuse s področja magistrske naloge. O rezultatih dela bo napisal poročilo, ga oddal v oceno mentorju in ustno predstavil na seminarju.

**Content (Syllabus outline):**

The research work is carried out in the field of biochemistry; the contents and the title are determined in agreement with the mentor. Students start with experimental work, apply appropriate methods and perform preliminary experiments in the field of the master's research. Experiments are followed by submission of a written report and seminar presentation of the results.

**Temeljna literatura in viri/Readings:**

Knjige in članki, ki so povezani z vsebino raziskovalnega dela / Books and journal articles relevant to the topic of research.

**Cilji in kompetence:**

**Objectives and competences:**

|  |  |

|                         |                     |                    |   | 75  | 75  | 5    |

Nosilec predmeta/Lecturer:

Vrsta predmeta/Course type:

obvezni/Mandatory

Jeziki/Languages:

|                      |  |
|----------------------|--|
| Predavanja/Lectures: |  |
| Vaje/Tutorial:       |  |

**Pogoji za vključitev v delo oz. za opravljanje  
študijskih obveznosti:**

|   |   |
|---|---|
| Študent oz. kandidat mora imeti predmet opredeljen kot študijsko obveznost. | The course has to be assigned to the student. |
|---|---|

**Prerequisites:**

**Vsebina:**

Raziskovalno delo se opravlja iz področja tehniške varnosti, požarne varnosti in okoljske varnosti. Vsebina in naslov se določata v soglasju z izbranim mentorjem – nosilcem ene izmed vsebin v programu.

**Content (Syllabus outline):**

Research work has to be done from the field of technical safety, fire safety and environmental safety. The subject and title are chosen in accordance with the advisor – lecturer of one of the subjects from programme.

**Temeljna literatura in viri/Readings:**

|   |
|---|
| Knjige in članki, ki so povezani z vsebino raziskovalnega dela. |
|---|

**Cilji in kompetence:**

Cilj predmeta je, da študentje s pomočjo laboratorijskega in praktičnega dela uporabijo osvojena teoretična znanja in v praksi spoznajo sistem tehničke in požarne varnosti, potek in vodenje procesov vzdrževanja in dviganja stopnje varnosti na delovnih mestih. Pri tem uporabijo in osvojijo

**Objectives and competences:**

The aim of the subject is that students with help of laboratory and practical work use attained theoretical knowledge and to understand in praxis system of technical and fire safety and how to manage maintenance and safety improvements on work places. During process they achieve knowledge of

|   |  |
|---|--|
| <p>potrebne instrumentalne in druge tehnike oz. metode. Dobljene rezultate z uporabo modernih programskih paketov kvantitativno obravnavajo v skladu s teoretičnimi napovedmi.</p> <p>Študentje pri predmetu pridobijo naslednje specifične kompetence:</p> <ul style="list-style-type: none"> <li>- uporaba pridobljenih znanj na specifičnem področju delovanja sistema varnosti in zdravja ali požarne varnosti;</li> <li>- samostojno opravljanje raziskovalnega in razvojnega dela.</li> </ul> | <p>instrumental and other techniques needed. They process gathered data with the use of state of the art computer codes in accordance with theoretical forecasts.</p> <p>Students get following specific competences within the subject:</p> <ul style="list-style-type: none"> <li>• Use of the knowledge in the specific field of occupational safety and health and fire safety</li> <li>• Independent research and development work</li> </ul> |
|---|--|

#### Predvideni študijski rezultati:

Znanje in razumevanje  
Med opravljanjem raziskovalnega dela bo študent pridobil:

- sposobnosti formuliranja problema,
- sposobnosti samostojnega iskanja ustrezne literature,
- sposobnosti obravnavanja problema v praksi,
- sposobnosti iskanja kvantitativnih rešitev in utemeljevanja ustreznosti rešitev,

sposobnosti predstavitev rezultatov svojega dela.  
Uporaba  
Znanje in pridobljene veščine bo študent lahko uporabil pri opravljanju poklica in opravljanju magistrskega dela.  
Refleksija  
Pri povezovanje vseh pridobljenih teoretičnih znanj z reševanjem problemov na področju tehniške varnosti, požarne varnosti in okoljske varnosti študent pridobi kritični pogled na uporabnost teh znanj.  
Prenosljive spremnosti  
Pri delu bo študent pridobil znanja o metodah reševanja kompleksnih problemov, o načinu predstavitev teh znanj v pisani in govorjeni oblikah povezani z ostalimi metodami posredovanja raziskav, ugotovitev itd.

#### Intended learning outcomes:

Knowledge and Comprehension  
During the research work will student get:

- Skill how to formulate the problem
- Skill of independent literature search
- Skill of problem assessment in praxis
- Skill of finding quantitative solutions and defending the appropriate solution
- Skill of presenting results of the work

Application  
Knowledge and gathered skills will student apply while working on his master's thesis

Analysis  
During linking of the theoretical knowledge with problem solving in the field of technical safety, fire safety and environmental safety student gathers critical view on applicability of the knowledge.

Skill-transference Ability  
During work student will acquire knowledge on methods for complex problem solving, on ways to present this knowledge in written and spoken words in connection with other methods for presenting research, conclusions etc.

#### Metode poučevanja in učenja:

Individualno raziskovalno delo študenta pod mentorstvom.

#### Learning and teaching methods:

Independent research work supervised by mentor.

#### Načini ocenjevanja:

Opravljen projekt. Ocene: 6-10 pozitivno

#### Delež/Weight

#### Assessment:

Finished project.

#### Reference nosilca/Lecturer's references:

**Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:**

|   |   |
|---|---|
| Študent oz. kandidat mora imeti predmet opredeljen kot študijsko obveznost. | The course has to be assigned to the student. |
|---|---|

**Prerequisites:**

| Vsebina:  | Content (Syllabus outline):  |
|---|--|
| Prinzipi tehniške varnosti<br>Zakonodaja na področju tehniške varnosti<br>Kvalitativne metode in njih uporaba<br>Kvantitativne metode za oceno tveganj<br>Uporaba računalniških programov za oceno tveganj<br>Tveganja na delovnem mestu<br>Analize vzrokov nezgod Root cause analize<br>Tveganje posameznika<br>Skupinsko tveganje<br>Izdelava varnostnih poročil<br>Interpretacija rezultatov varnostnih analiz | Principles of Technical Safety<br>Legislation on the field of technical safety<br>Qualitative methods and their use<br>Quantitative methods for risk assessment<br>Use of computer codes for risk assessment<br>Work place risks<br>Root cause analysis<br>Individual risk<br>Societal risk<br>Safety reports<br>Interpretation of the safety assessment results |

**Temeljna literatura in viri/Readings:**

|  |
|--|
| Glavna literatura:   |
| • AICHE: Guidelines for Technical Management of Chemical Process Safety, New York 1989 (30%) |
| • Ian Sutton: Process Reliability and Risk Management, Van Nostrand New York, 1992 (20%)     |

Pomožna literatura:

- J.X.Wang, M.L.Roush: What Every Engineer should know about Risk Engineering and Management, Marcel Decker INC. , New York 2000
- ACSNI: Organizing For Safety, Health and Safety Commission, April 1993,
- Lloyd's Register The Engineering Council: Guidelines on Risk Issues, UK 1993
- Perrow C.: Normal Accidents, Living with High-Risk Technologies, Basic Books, New York, 1985
- Arendt et al:Evaluating Process Safety in the Chemical Industry, A Manager's Guide to Quantitative Risk Assessment, Chemical Manufacturers Association, Washington, USA, 1989
- Clemen, Reilly: Making Hard Decisions, PWS- Kent Publishing Company, 1991

**Cilji in kompetence:**

Študentje naj bi spoznali, kako zbrati informacije o tveganjih ter kako te informacije lahko koristijo pri načrtovanju preventivnih ukrepov za zagotavljanje varnosti in kako lahko s pomočjo vedenja o tveganjih lahko načrtujemo svoje dejavnosti, da bodo varne in tudi prijazne do zaposlenih ter da bodo ob morebitnih nezgodah posledice čim manjše.

**Objectives and competences:**

Students will learn how to gather information on risks and how this information can be used for planning of preventive measures for safety assurance and how can we by knowledge about risks plan activities to be safe and employee friendly and in the case of accidents to have as small as possible consequences.

**Predvideni študijski rezultati:**

Znanje in razumevanje

Študentje naj bi pridobil osnovna teoretska in praktična znanja, ki so potrebna za razumevanje tveganja različnih vrst. Razumeli bodo kateri so elementi tveganj. Kako lahko zmanjšujemo tveganja in s kakšnimi uktrepi povečujemo varnost. Razumel bo vlogo človeka v socio-tehnoloških sistemih in razumel zakaj je tako pomembna povezava človek stroj.

Uporaba

Znanja bo lahko uporabi pri problemih nevarnih postopkov in sistemov iz različnih področij človeškega delovanja.

Refleksija

Teoretska in praktična znanja bo lahko študent uporabil pri reševanju praktičnih in teoretskih problemov. Spoznanja o zmogljivostih in omejitvah metod tehničke varnosti mu bodo koristila pri sprejemanju tako operativnih, taktičnih in tudi pri strateških odločitvah

Prenosljive spretnosti

Pridobil si bo tako analitske spretnosti za reševanje problemov kot tudi komunikacijske spretnosti, ki jih bo potreboval pri vsakdanjem delu.

**Intended learning outcomes:**

Knowledge and Comprehension

Students will acquire the basic theoretical and practical skills to understand different risks.

They will understand the elements of the risks. How can we reduce the risks and with what measures we can enhance safety.

He will understand the role of human in the socio-technological systems and understand why the connection between the man and machine is so important.

Application

Knowledge will be used during problems of dangerous procedures and systems in different areas of human activity

Analysis

Theoretical and practical skills student will use during practical and theoretical problems solving. His recognition of capabilities and limitations of technical safety methods will enable him while taking strategic, tactical and operational decisions.

Skill-transference Ability

He will get analytical skills as well as communication skills needed during every day work.

**Metode poučevanja in učenja:**

Predavanja

Seminarske vaje

Seminarska naloga s področja tveganj

**Learning and teaching methods:**

Lectures

Seminar exercises

Seminar work from the field of risks

**Načini ocenjevanja:**

**Delež/Weight**

**Assessment:**

|   |         |  |
|---|---------|--|
| A) Seminarska naloga                        | 30,00 % | A) Seminar work                          |
| B) Izvedba in predstavitev projekta         | 30,00 % | B) Project and its presentation          |
| C) Pisni izpit                              | 40,00 % | C) Written exam                          |
| Skupna ocena mora biti 6 ali več (uspešno). |         | Grade should be 6 or higher (successful) |

| <b>Vsebina:</b><br>Predmet obsega naslednja poglavja: <ul style="list-style-type: none"><li>• vpliv lastnosti materiala na trajnost in zanesljivost delovanja</li><li>• mehanizem nastanka poškodb pri obremenitvi, kemijskih procesih , vplivu okolja, bioloških vplivih in pri slabem ravnanju uporabnikov z napravami in objekti</li><li>• osnovni mehanizem utrujanja</li><li>• osnovni mehanizmi elektrokemijske korozije in korozije v plinih, elektrodnih procesih, termodinamika in kinetika elektrokemijske korozije, lastnosti korozijsko odpornih materialov</li><li>• mehanizmi mehanske in kemične obrabe, lastnosti obrabno odpornih materialov</li><li>• mehanizmi biološkega propadanja</li><li>• metode za spremljanje poškodb, vzdrževanje in načini sanacije</li></ul> | <b>Content (Syllabus outline):</b> |
|---|------------------------------------|

**Temeljna literatura in viri/Readings:**

- Batchelor, A. W., Loh N. L. Chandrasekaran, M.: Materials degradation and its control by surface engineering, 2nd Ed., London, Imperial College Press, 2002
- Trethewey, K. R., Chamberlain, J.: Corrosion for science and engineering, 2nd Ed., Harlow, Longman, 1995
- Mangonon, P. L.: The principles of materials selection for engineering design, Upper Saddle River, Prentice Hall, 1999

**Cilji in kompetence:**

Študentje se seznanijo z vplivi obremenitve in okolja na življenjsko dobo materialov v obratovanju. Spoznajo mehanizem nastajanja utrujanja, korozije in obrabe materialov na makro in mikro nivoju. Seznanijo se s pomenom propadanja materialov za trajnost in zanesljivost delovanja sistemov, naprav in objektov glede na gospodarske in družbene posledice. Spoznajo osnovne postopke sprotnega spremljanja, nastanka in napredovanja propada ter osvojijo postopke vzdrževanja in sanacije.

**Objectives and competences:**

Students understand degradation mechanisms in different materials (metallic, ceramic, polymer, composites) and common practical solutions. Subject specific competences include:

- understanding the principles of thermodynamics which lead to corrosion
- understanding corrosion kinetics, based on the concept of mixed potentials
- understanding chemical degradation processes,
- acquiring methods for determining the rate of corrosion
- acquiring control methods for material degradation and its prevention
- using appropriate engineering approaches to prevent corrosion.

**Predvideni študijski rezultati:****Znanje in razumevanje**

Pridobil bo celovita znanja o lastnostih materialov s poudarkom na kemijskih, fizikalnih in mehanskih lastnostih. Razumel bo zakaj in katere lastnosti so neodvisne od priprave, katere lastnosti pa so v bistvu odvisne od izbire procesa priprave in z njim določene mikrostrukture. Ob tem bo spoznal konkretne materiale (kovine, polimerne snovi, keramiko, kompozite idr.), ki se uporabljajo v industrijskih in drugih aplikacijah ter pridobil znanja potrebna za pravilno tolmačenje podatkov v priročnikih in bazah podatkov. To je še posebej pomembno kadar je gradivo izpostavljeno korozivni sredini ali drugim pogojem in obremenitvam, kjer prihaja do interakcije kemijskih, fizikalnih in mehanskih vplivov.

**Uporaba**

V okviru predmeta bo študent pridobil znanja potrebna za sodelovanje z drugimi strokovnjaki pri izboru primerenega materiala za določeno aplikacijo ter za analizo tveganja in nevarnosti odpovedi pod normalnimi pogoji obratovanja in možnosti, da bo pri dodatnih obremenitvah materialov, zaostrenih ali izrednih razmerah prišlo do sprememb, ki povečajo tveganja do mere, nesprejemljive za varno obratovanje.

**Refleksija**

Kritična uporaba teoretičnih znanj pri interpretaciji praktičnih meritev;

Kritična presoja rezultatov, pridobljenih z različnimi metodologijami

**Intended learning outcomes:****Knowledge and Comprehension**

Student will the relation between materials properties and chemical and physical properties. The question why some materials properties depend on processing and some do not will be answered. Microstructure as important variable will be elaborated. The most important properties of materials (metals, ceramics, polymers and composites) used in industrial processes will be given and compared.

**Application**

Student will get the knowledge needed for cooperation with experts from other disciplines in selection of appropriate material for given application. Furthermore risk assessment for work under normal and extreme working conditions will be elaborated.

Student must be able to define why changes in material occur and when they don't allow anymore safe operation.

**Analysis**

Rational use of theory in interpretation of real corrosion tests.

Coherent evaluation of results obtained by various experimental techniques.

**Skill-transference Ability**

Ability for work in laboratory, identification and solution of corrosion problems related to materials properties.

Ability to collect and categorize literature (web) information and ability to present acquired

**Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:**

**Prerequisites:**

|   |   |
|---|---|
| Študent oz. kandidat mora imeti predmet opredeljen kot študijsko obveznost. | The course has to be assigned to the student. |
|---|---|

**Vsebina:**

1. Sistemi vodenja tveganja, osnovni elementi vodenja tveganja.
2. Odgovornost: nameni in cilji, elementi odgovornosti: avtoriteta, odgovornost, podpora, informacije.
3. Vedenje o procesu in dokumentacija: definicija procesa, projektni kriteriji, načrtovanje procesa in opreme, varnostni sistemi.
4. Navodila za varnostni pregled velikih projektov: varnostni pregled, pregled projekta in varnostnih navodil, navodila za izvajanje projekta in nadzor
5. Vodenje procesnega tveganja: identifikacija nevarnosti, analiza tveganja med obratovanjem, upravljanje z ostalimi tveganji, vodenje procesa med nezgodami.

**Content (Syllabus outline):**

1. Risk management systems, basic elements
2. Accountability: objectives and goals, Elements of accountability: authority, responsibility, support and information
3. Process Knowledge and documentation, Definition of process, design basis criteria Process and equipment design, safety systems
4. Process safety review procedures for capital projects: safety reviews process design and review procedures, process management procedures and controls
5. Process risk management: Hazard identification: HAZOP, residual risk management Process management during emergencies
6. Management of change Change of technology, change of organization, change of procedures, permanent changes, temporary changes

|  |   |
|--|---|
| <p>6. Vodenje sprememb v procesu: sprememba naprave, sprememba organizacije, sprememba navodil, stalne spremembe, začasne spremembe.</p> <p>7. Integriteta procesa in opreme: zanesljivostno inženirstvo, obratovalna navodila, preventivno vzdrževanje in navodila.</p> <p>8. Človeški faktor: analiza človeških napak</p> <p>9. Usposabljanje in izvrševanje: izbira in razvoj programov za usposabljanje</p> <p>10. Preiskava nezgod: velike nezgode, vključevanje zunanjih ekspertov, komunikacija, zbiranje podatkov in analiza.</p> <p>11. Pregledi in popravne akcije: pregledi, ugotavljanje spoštovanja obveznosti, notranji in zunanji pregledovalci</p> | <p>7. Process and Equipment integrityReliability engineering, Maintenance procedures<br/>Testing procedures</p> <ol style="list-style-type: none"> <li>1. Human factors,Human error analysis</li> <li>2. Training and Performance,Selection and development of training programs</li> <li>3. Accident investigation,Major accidents, inclusion of third party experts, communication, data acquisition and analysis</li> <li>4. Audits and Corrective Actions,Compliance reviews,Internal /External Auditors</li> </ol> |

### Temeljna literatura in viri/Readings:

Glavna literatura:

- AIChE: Guidelines for Technical Management of Chemical Process Safety, New York 1989 (30%)
- Ian Sutton: Process Reliability and Risk Management, Van Nostrand New York, 1992 (30%)
- Guidelines for Chemical Process Quantitative Risk Analysis, Second Ed., Center for Chemical Process Safety, American Institute of Chemical Engineers, 2000. (10%)
- Guidelines for Analyzing and Managing the Security Vulnerabilities of Fixed Chemical Sites (10%)

Pomožna literatura:

- J.X.Wang, M.L.Roush: What Every Engineer should know about Risk Engineering and Management, Marcel Decker INC. , New York 2000
- ACSNI: Organizing For Safety, Health and Safety Commission, April 1993,
- Lloyd's Register The Engineering Council: Guidelines on Risk Issues, UK 1993
- Perrow C.: Normal Accidents, Living with High-Risk Technologies, Basic Books, New York, 1985
- Arendt et al:Evaluating Process Safety in the Chemical Industry, A Manager's Guide to Quantitative Risk Assessment, Chemical Manufacturers Association, Washington, USA, 1989

### Cilji in kompetence:

Študentje naj bi spoznali, kako informacije o tveganju lahko koristijo pri načrtovanju preventivnih ukrepov za zagotavljanje varnosti in kako lahko s pomočjo vedenja o tveganju optimiramo svoje dejavnosti, da bodo varne in da bodo tudi prijazne do okolja.

### Objectives and competences:

Students should learn how they can benefit by information on risk for designing preventive measures assuring safety and how we can optimize our activities to be safe and environmental friendly.

### Predvideni študijski rezultati:

#### Znanje in razumevanje

Študentje naj bi pridobili osnovna teoretska in praktična znanja, ki so potrebna za vodenje tveganja. Spoznali bodo vse elemente vodenja tveganja in tudi kako se odloča v pogojih negotovosti.

#### Uporaba

Znanja, ki jih bodo študentje osvojili jim bodo pomagala pri odločanju glede vseh vrst tveganj. Znali bodo uporabiti rezultate varnostnih analiz in jih tudi kritično oceniti ter se na njihovi osnovi tudi odločiti kako se nevarnostim izogniti in kako zmanjšati posledice.

#### Refleksija

Teoretska in praktična znanja bo lahko študent uporabil pri reševanju praktičnih in teoretskih problemov (študij in praksa). S pomočjo spoznanj o

### Intended learning outcomes:

#### Knowledge and Comprehension

Student should gathered basic theoretical and practical skills needed for risk management and also how to make decisions in uncertainty

#### Application

Knowledge, which will students gather will help them when making decisions on variety of risks. They will be able to use the results of safety analyses in to judge them critically and to decide how to avoid the hazards and to reduce the consequences.

#### Analysis

Theoretical and practical knowledge will be used for solving theoretical and practical problems. With knowledge about the capabilities and limitations of the risk assessment methods students will find out

|   |  |
|---|--|
| <p>zmogljivostih in omejitvah posameznih metod za oceno tveganj bo lahko študent ocenil kaj v praksi pomenijo in to mu bo dalo osnovo za mnoge pomembne kasnejše odločitve.</p> <p>Prenosljive spretnosti</p> <p>Logično razmišljanje in logično povezovanje nepopolnih informacij v celoto na osnovi katere se vrši proces odločanja so spretnosti, ki bodo študentu koristile povsod.</p> | <p>their use in praxis which will enable them later making important decisions.</p> <p><b>Skill-transference Ability</b></p> <p>Logical thinking and logical linking imperfect information into the whole based on which decision process is taking place are skills from which will students benefit in all professional areas.</p> |
