| Vsebina: Vezava ligandov v bioloških sistemih. Kooperativnost vezave in alosterija. Modifikacija encimske aktivnosti: mehanizmi reverzibilne in ireverzibilne inhibicije, esencialna in neesencialna aktivacija, določanje mehanizma delovanja modifikatorjev encimske aktivnosti, inhibicija s substratom in produktom. Alosterična regulacija encimske aktivnosti. Napredna encimska kinetika: reakcije z več substrati in encimi. Reakcije v heterogenih sistemih (pretvorba netopnih substratov, reakcije na fazni meji lipid-voda). Kinetika hitrih reakcij. Kinetika predravnotežnega | Content (Syllabus outline): Ligand binding in biological systems. Cooperativity of binding and allostery. Modification of enzyme activity: mechanisms of reversible and irreversible inhibition, essential and nonessential activation, determination of the mechanism of enzyme activity modification, substrate and product inhibition. Allosteric regulation of enzyme activity. Advanced enzyme kinetics: multi-substrate and multi-enzyme reactions. Reactions in heterogeneous systems (turnover of insoluble substrates, reactions at the lipid-water interface). Fast reaction kinetics. Pre-steady-state kinetics. |

stanja.

Tesne interakcije. Vpliv okolja na medmolekulske interakcije.

Računalniške metode analize in napovedi molekulskih interakcij. Računalniško načrtovanje regulatorjev delovanja bioloških molekul. Povezava med strukturo in aktivnostjo načrtovanih biološko aktivnih molekul.

Pri vseh obravnavanih vsebinah je poudarek na povezavi med strukturo in funkcijo bioloških molekul ter matematičnih modelih za opis interakcij.

Seminarske naloge na osnovi vrhunskih aktualnih člankov s področja obravnavane tematike.

Tight interactions. Environmental effects on molecular interactions.

Computational methods for the analysis and prediction of molecular interactions. Computational design of novel regulators of biological molecules. Structure-activity relationship of designed biologically active substances.

The course is designed to emphasize the structure-function relationship involved in biological interactions as well as the mathematical models used to describe these interactions.

Seminar work based on state-of-the-art scientific papers with content related to this course.

Temeljna literatura in viri / Readings:

- Fundamentals of Enzyme Kinetics. Cornish-Bowden, A. Fourth Edition. 2012. Wiley-Blackwell. 516 strani (60 %)

Dopolnilna literatura:

- Enzyme Kinetics: Behavior and Analysis of Rapid Equilibrium and Steady-State Enzyme Systems Segel, I.H. 1975. John Wiley & Sons, Inc, 957 strani

Cilji in kompetence:

Predmet obravnava medmolekulske interakcije in encimsko katalizirane kemijske reakcije z vidika povezave med strukturo in funkcijo bioloških molekul ter interpretacije mehanizmov interakcij.
Študenti bodo sposobni samostojno preučevati interakcije med molekulami, encimsko katalizirane reakcije in njihovo regulacijo ter rezultate ustrezno interpretirati.

Objectives and Competences:

The course focuses on intermolecular interactions and enzyme-catalyzed chemical reactions from the perspective of the relationship between structure and function of biological molecules, and the interpretation of the mechanisms of interaction.
Students will gain the competence to independently study intermolecular interactions, enzyme-catalyzed reactions and their regulation, and interpretation.

Predvideni študijski rezultati:

Znanje in razumevanje

Študenti pridobijo znanje o interpretaciji mehanizmov interakcij med molekulami in encimsko kataliziranih reakcij ter njihove

Intended Learning Outcomes:

Knowledge and Comprehension

Students learn to interpret the mechanisms of intermolecular interactions and enzyme-catalyzed reactions. They integration this

| regulacije. Pridobljeno znanje poveže s predhodnim znanjem o strukturi in funkciji proteinov in drugih bioloških molekul. | knowledge with prior knowledge of the structure and function of proteins and other biological molecules. |
| Uporaba Sposobnost določanja mehanizmov medmolekulskih interakcij ter delovanja in regulacije encimov je ključnega pomena pri študijah bioloških sistemov na molekulskev nivoju. Obenem je ključnega pomena pri dizajnu farmakoloških učinkovin, ki delujejo preko modifikacije aktivnosti različnih encimov ali drugih proteinov. | Application The ability to determine mechanisms of intermolecular interactions and the kinetics of enzyme catalysis and its regulation is a prerequisite for studying biological systems at the molecular level. It is also key to successful design of pharmacologically active substances that act by modifying the activity of enzymes and other proteins. |
| Refleksija Študenti povežejo predhodno znanje z novim znanjem. | Analysis Students reflect on prior knowledge and integrate it with new knowledge. |
| Prenosljive spretnosti Sposobnost načrtovanja eksperimentov in interpretacije rezultatov, sposobnost uporabe literature in drugih virov, sposobnost ustnega in pisnega poročanja. | Skill-transference Ability Ability to plan experiments and interpret the results, ability to use literature and other sources, ability of written and oral reporting. |

Metode poučevanja in učenja:

Predavanja, raziskovalni seminarji, laboratorijske vaje.

Learning and Teaching Methods:

Lectures, seminars based on scientific research papers, laboratory tutorial.
