

UČNI NAČRT PREDMETA / COURSE SYLLABUS

Predmet:	BIOPROCESNO INŽENIRSTVO
Course Title:	BIOPROCESS ENGINEERING

Študijski program in stopnja Study Programme and Level	Študijska smer Study Field	Letnik Academic Year	Semester Semester
MAG Kemijsko inženirstvo, 2. stopnja	/	1.	1.
USP Chemical Engineering, 2 nd Cycle	/	1 st	1 st

Vrsta predmeta / Course Type: obvezni / Mandatory

Univerzitetna koda predmeta / University Course Code: IN213

Predavanja Lectures	Seminar Seminar	Vaje Tutorial	Klinične vaje Work	Druge oblike študija	Samost. delo Individual Work	ECTS
45	15	15 LV	/	/	75	5

Nosilec predmeta / Lecturer: izr. prof. dr. Polona Žnidaršič Plazl
/ Dr. Polona Žnidaršič Plazl, Associate Professor

Jeziki / Languages:

Predavanja / Lectures: slovenski / Slovenian

Vaje / Tutorial: slovenski / Slovenian

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Študent oz. kandidat mora imeti predmet opredeljen kot študijsko obveznost.

Prerequisites:

The course has to be assigned to the student.

Vsebina:

- Pomen bioprocесnega inženirstva in biotehnologije. Razvoj bioprocесov: zgodovina proizvodnje penicilina.
- Struktura in delovanje celice. Raznolikost živega sveta. Mikrobiološke zbirke. Prenos snovi med celico in okolico. Hranila.
- Kinetika rasti celic. Nestruktturni in strukturni modeli rasti. Specifike rasti nitastih gliv.
- Načini vodenja bioprocесov. Šaržno gojenje, šaržno gojenje z dohranjevanjem. Kontinuirno gojenje, kemostat. Simulacije procesov.
- Biotransformacije. Imobilizacija encimov.

Content (Syllabus outline):

- The role of bioprocess engineering and biotechnology. Bioprocess development: a history of penicillin production.
- Characteristics of biological systems. The diversity of the living world. Microbial collections. Material exchange between cells and environment. Substrates.
- Cell growth kinetics. Unstructured and structured growth models. Specifics of growth of filamentous fungi.
- Bioprocess operation. Batch, fed-batch and continuous bioprocess simulations.
- Biotransformations. Enzyme immobilization.

<ul style="list-style-type: none">- Bioreaktorji. Instrumentacija in vodenje bioreaktorjev. Prenos toplote in snovi v bioreaktorjih.- Pripravljalni in zaključni procesi.- Integrirani procesi. Mikroreaktorji in »lab on a chip« sistemi. Nekonvencionalni mediji.- Specifičnosti bioprocесов з živalskimi in rastlinskimi celicami. Uporaba bioinženirstva v medicini.	<ul style="list-style-type: none">- Bioreactors. Instrumentation and control. Heat and mass transfer in bioreactors.- Upstream and downstream processes.- Integrated processes. Microreactors and "lab-on-a-chip" systems. Non-conventional media.- Bioprocesses with plant and animal cells. <p>Bioengineering in medicine.</p>
---	---

Temeljna literatura in viri / Readings:

- Doran, P.M. Bioprocess Engineering Principles, 2nd Ed., Elsevier, Amsterdam [etc.], 2013. 919 p. (30 %)
- Shuler, M.L., Kargi F. Bioprocess Engineering: Basic Concepts. 2nd Ed., Prentice Hall, Upper Saddle River, 2002. 553 p. (10 %)
- Nielsen J., Villadsen J., Liden G. Bioreaction Engineering Principles, 2nd Ed. Kluwer Academic/Plenum Press, New York, 2002. 456 p. (10 %)
- Raspor, P. (ur.) Biotehnologija. Bia, d.o.o., Ljubljana. 1996. 815 p. (20 %)
- Žnidaršič Plazl, P., Pavko, A. Praktikum iz biokemijskega inženirstva. Fakulteta za kemijo in kemijsko tehnologijo, Ljubljana. 2005. 89 p. (90 %)

Cilji in kompetence:

Cilj predmeta je, da se študentje naučijo uporabljati inženirske principe za analizo, načrtovanje in razvoj bioprocесов, pri čemer izhajajo iz znanj o molekularnih osnovah ved o življenju, termodinamike in kinetike. Študent si pri predmetu pridobi naslednje specifične kompetence:

- sposobnost pridobivati in analizirati podatke za načrtovanje, spremljanje in nadzor bioprocесов
- osvajanje nekaterih izbranih laboratorijskih tehnik: vodenje in analiza bioprocesa v laboratorijskem bioreaktorju, določanje koeficiente prenos kisika v kapljevinu, mikrofiltracija

Objectives and Competences:

Objectives: To acquaint students to apply engineering principles to Student will advance the basic knowledge in life sciences from the engineering perspectives and gain the comprehension of specificities of the development, operation, performance and monitoring of processes with biocatalysts. Principles of enzyme function and mechanisms, as well as the use of whole cells as biocatalysts will be adopted., deriving from knowledge about the fundamental concepts of life sciences, thermodynamics and reaction kinetics. Students obtain the following specific competencies:

- ability to obtain an analyze quantitative data necessary data development, monitoring and control of bioprocesses
- Knowledge of some selected laboratory techniques: management and analysis of a bioprocess in a laboratory bioreactor, oxygen transfer coefficient determination, microfiltration

Predvideni študijski rezultati:

Znanje in razumevanje

Študent nadgradi osnovna znanja iz ved o življenju z inženirskega vidika in osvoji specifičnosti vodenja in analize biopresosov. Razume zakonitosti delovanja encimov in celicer osnovne principe industrijskih biopresosov.

Uporaba

Pridobljena znanja je študent sposoben uporabljati pri razvoju, vodenju in analizi biopresosov.

Refleksija

Študent bo interpretiral ter pred kolegi analiziral lastno razumevanje izbranih biopresosov.

Prenosljive spremnosti

Računalniška obdelava eksperimentalnih podatkov, uporabljanje spletnih virov, pisanje poročil, priprava računalniške predstavitev seminarja, timsko delo.

Intended Learning Outcomes:

Knowledge and Comprehension

Student will advance the basic knowledge in life sciences from the engineering perspectives and gain the comprehension of specificities of the development, operation, performance and monitoring of bioprocesses. Principles of enzymes and cell function, and basics of industrial bioprocesses will be adopted.

Application

Student will be capable of using gained knowledge for development, analysis and control of bioprocesses.

Analysis

Student will interpret and analyse the knowledge on selected bioprocesses.

Skill-transference Ability

Analysis of experimental data, the use of internet as a data source, writing of reports, a seminar preparation and oral presentation, team work.p

Metode poučevanja in učenja:

Predavanja, projektno-tehnoloških študije – seminarji, praktične vaje.

Learning and Teaching Methods:

Lectures, seminars, practical training.

Delež (v %) /

Načini ocenjevanja:

Weight (in %) **Assessment:**

Vaje: Oceno vaj sestavljajo sprotno preverjanje znanja in ocene poročil. Seminarji Pisni in ustni izpit	15 % 15 % 70 %	Practical training: Final grade consists of the preparation for the lab work and reports. Seminars Written and oral exam

- P.Doran, Bioprocess Engineering Principles, Acad. Press,(2012), str. 525 (30%)

Berovic M., Nienow A., Bioprocess Engineering Principles, UL Press (2010), str.444)(50%)

Cilji in kompetence:

Cilj predmeta je spoznavanje študentov z osnovami delovanja, vodenja in načrtovanja bioreaktorjev, vseh inženirskih operacij procesa biosinteze in prenosa tehnologije iz laboratorijskega v industrijsko merilo, kar slušatelj spozna na praktičnih primerih. Predmet se povezuje z osnovnimi tehničnimi predmeti in naravoslovnimi predmeti kot so analitska kemija, biokemija, mikrobiologija in biotehnologija rastlinskih in živalskih kultur.

Predmetno specifične kompetence:

- sposobnost razumevanja in funkcionalnega povezovanja načrtovanja in obratovanja bioreaktorjev s potrebami tehnološkega procesa, mikrobne fiziologije in rekombinantnih tehnologij genskega inženiringa
- spoznavanje in povezovanje delovanja bioreaktorja z osnovnimi operacijami kemijskega in biokemijskega inženirstva –

Objectives and Competences:

Capability and insight of the role and the relevance of basical engineering principles and applications in biotechnology. The focus of the study is to learn how to use engineering technology skills and application in bioreactors in laboratory, pilot and industrial practice. The course is linked to chemical engineering, physical chemistry, industrial microbiology, plant and animal biotechnology.

- Capability and insight in the stratgegy and the role of bioreactor design according to the type of microorganism or tissue culture, type of bioprocess and the mode of operation.
- Capability and interlinking of bioreactor operation and techniques with chemical and biochemical engineering principles – mass and heat transport processes, fluid dynamics, process rheology and the modes of operation.

<p>prenosa topote in snovi, bioprosesne reologije, mešanja z vodenjem in kontrolo bioprosesa.</p> <ul style="list-style-type: none">- spoznavanje vpliva mikrobne fiziologije na razvoj tehnološkega postopka od laboratorijskih raziskav do industrijskega postopka- uporaba bioreaktorjev z ozirom na zahteve industrijske biotehnologije	<ul style="list-style-type: none">- Capability of understanding the influence of microbial physiology to the bioreactor design and the modes of operation and their influence to the bioprocess development and design.- Capability of understanding of pilot and large scale bioreactors operation.
--	---

Predvideni študijski rezultati:

Znanje in razumevanje

Razumevanje delovanja bioreaktorjev in njihove vloge v biotehnološkem procesu. Sposobnost vlučevanja predhodno pridobljenih znanj kemijskega inženirstva z biotehnološkim procesom. Spoznavanje pomembnosti mikroorganizma kot glavnega akterja v tehnološkem procesu nastajanja bioproduktov in načrtovanja bioreaktorjev. Sposobnost povezovanja instrumentacije bioprosesov s sodobnimi principi meritev in regulacije.

Uporaba

Na osnovi pridobljenih osnovnih znanj študent spozna, delovanje in oblikovanje bioreaktorjev z ozirom na potrebe fiziologije mikrobnih celic in njihovo pridobivanja produktov visokotonažne, rekombinantne in fine biotehnologije.

Refleksija

Refleksija lastnega razumevanja vloge povezovanja predhodno pridobljenih znanj biokemijskega inženirstva, mikrobiologije in mikrobne fiziologije in povezave teorije in prakse. Refleksija kritičnega vrednotenja skladnosti med teoretičnimi načeli in praktičnim ravnanjem.

Prenosljive spremnosti

Pridobivanje praktičnih tehnoloških znanj kot osnove za uspešno vodenje osnove uspešnega tehnološkega procesa biosinteze v bioreaktorjih. Študenti pridobijo osnovna tehnološka znanja za načrtovanje in uspešno vodenje bioreaktorjev od laboratorijskega do industrijskega merila. Študent pridobi znanja

Intended Learning Outcomes:

Knowledge and Comprehension

Understanding of the relevance and interdisciplinary structure of biotechnology. reactor design and operation according to the applied microbial culture, basic chemical and biochemical engineering principles and the modes of operation. Ability of comprehensive instrumentation and process control.

Application

Recognition of the relevance and the role of the operation and the bioreactor design related to microbial physiology and microbial cell structures and bioreactor design in operation in bulk, recombinant and fine product biotechnology.

Analysis

Reflection of the role of basic biochemical engineering and microbiology knowledge with theory and practice integration. Theoretical principles and practice consistency reflection. Reflection of critical evaluation of conformity between theoretical principles and practical behavior.

Skill-transference Ability

Acquisition of practical technology skills as the basis for the successful conduct of successful bioprocess in various types of reactors. The basic technology skills for planning and management of bioreactors from laboratory to industrial scale.

Knowledge in the form of lectures, seminars

v obliki predavanj, seminarjev in povezovanja teoretičnih znanj z pridobljenimi znanji iz strokovne literature.

and theoretical skills and knowledge from the scientific literature.

Metode poučevanja in učenja:

iz čistilnih naprav, hlapnih nehalogeniranih in halogeniranih spojin iz kemijske industrije, organskih pesticidov in herbicidov.

from food industry, waste halogenated and non-halogenated compounds from chemical industry, organic pesticides and herbicides.

Temeljna literatura in viri / Readings:

- Biodegradation and Bioremediation, M.Alexander, Academic Press, 1999, 453 str. (30%)
- Renewables-based technology: sustainabilizy assesment, J.Dewulf and H. Van Langenhove, John Wiley and Sons, 2006, 339 str. (30%)

Cilji in kompetence:

Slušatelj spozna vrste polutantov glede na sestavo, strukturo in lastnosti in postopke za njihovo biorazgradnjo. To mu omogoča naslednje kompetence:
- poznavanje oziroma klasifikacijo polutantov,
- poznavanje primernih postopkov za njihovo odstranjevanje,
- sposobnost izbire primerne naprave oziroma tehnologije za odstranjevanje določene izbrane snovi,
- sposobnost izbire odgovarjajočih obratovalnih parametrov ter njihovega optimiranja,
- sposobnost opravljanja raziskav na tem področju in vodenja procesa v industrijskem merilu,
- sposobnost razumevanja in povezovanja bioremediacije z drugimi tehnikami in znanji pri zaščiti in varovanju okolja.

Objectives and Competences:

Recognizing types of pollutants regarding their chemical composition, structure and basic principles of their removal. This allows:

- ability to classify the pollutants,
- evaluation of suitable processes for their removal, selection of equipment and technology as well as process parameters,ability to perform research work in this field in a laboratory and industrial scale,
- ability to understand and include bioremediation into other techniques for environmental protection.

Predvideni študijski rezultati:

Znanje in razumevanje

Študent pridobi znanja o vrstah polutantov, vrstah postopkov za njihovo odstranjevanje in izbiri primerne naprave oziroma tehnologije. To mu omogoča analizo določene problematike in sintezo znanj pri njenem reševanju: zna opredeliti nalogu in jo rešiti na teoretskem in praktičnem nivoju.

Uporaba

S pridobljenim znanjem je študent sposoben za izbran polutant izbrati primeren proces skupaj z obratovalnimi pogoji bodisi v laboratorijskem merilu za raziskovalne namene ali pa v industrijskem merilu za proizvodno tehnologijo.

Intended Learning Outcomes:

Knowledge and Comprehension

Student learns about the types of pollutants, types of processes for their removal and selection of a suitable equipment and technology. This allows the analysis of a particular problem and synthesis of knowledge for its solution: he knows how to define the problem and how to solve it on a theoretical and practical level.

Application

With the acquired knowledge student is able to select a suitable process together with operating conditions on a laboratory scale for research purposes as well on an industrial scale for a process technology for a particular pollutant.

Refleksija Na osnovi pridobljenega teoretičnega znanja in praktične vaje študent pridobi občutek za ovrednotenje podatkov in prenos znanja v raziskovalni in/ali tehnološki proces.	Analysis On the basis of acquired theoretical and practical knowledge, student gets the feeling for data evaluation and knowledge transfer to the research and/or industrial process.
Prenosljive spretnosti Uporaba različnih literaturnih virov (knjige, članki, elektronsko gradivo) omogoča zbiranje podatkov oziroma vrednotenje lastnih rezultatov in njihovo interpretacijo ter preverjanje pravilnosti. Končni rezultat je boljše razumevanje proučevanega procesa. Hkrati se razvijajo sposobnosti za vključevanje v skupinsko delo, komunikacijo in pripravo pisnega materiala.	Skill-transference Ability Use of various literature sources (books, papers, electronic data) enables data collection and evaluation of own results, their interpretation and correctness control. The final result is a better understanding of the process. Skills for a team work, communication and written report preparation are simultaneously developed.

Metode poučevanja in učenja: Predavanja, laboratorijske vaje, seminarji.	Learning and Teaching Methods: Lectures, laboratory exercises, seminars.

**Pogoji za vključitev v delo oz. za opravljanje
študijskih obveznosti:**

Študent oz. kandidat mora imeti predmet
opredeljen kot študijsko obveznost.

Prerequisites:

The course has to be assigned to the student.

Vsebina:

Temeljna vsebinska področja predmeta so:
 - uvod v encimsko tehnologijo in
biotransformacije, encimi, mikroorganizmi kot
biokatalizatorji;
 - kinetika encimsko kataliziranih reakcij,
stabilnost encimov, izboljšanje encimov;
 - proizvodnja in izolacija encimov, encimi v
organski kemiji, uporaba encimov v
raztopinah;
 - imobilizacija encimov, imobilizacija
mikroorganizmov in celic; specifični reaktorji
 - karakterizacija imobiliziranih
biokatalizatorjev, prenos snovi in reakcija,
določanje kinetike imobiliziranih
biokatalizatorjev;

Content (Syllabus outline):

The primary subject areas of the course are:
 - Introduction to enzyme technology and
biotransformations, enzymes, microorganisms
as biocatalysts;
 - Kinetics of enzyme catalyzed reactions,
enzyme stability, improvement of enzymes;
 - The production and isolation of enzymes,
enzymes in organic chemistry, the use of
enzymes in solution;
 - Immobilization of enzymes, immobilization of
microorganisms and cells; specific reactors
 - Characterization of immobilized biocatalysts,
mass transfer and reaction, kinetic
characterization of immobilized biocatalysts;

- izbrani primeri industrijskih biotransformacij
- integrirani procesi biotransformacij,
biotransformacije v mikroreaktorjih,
biotransformacije v nekonvencionalnih medijih

- Selected examples of industrial
biotransformations
- An integrated bioprocesses,
biotransformations in microreactors,
biotransformations in non-conventional media

Temeljna literatura in viri / Readings:

- Buchholz, K., Kasche, V., Bornscheuer, U.T. Biocatalysts and Enzyme Technology, 2nd Edition. Wiley-VCH Verlag GmbH & Co. KGaA, Weinheim. 2012. 626 str. (70%)
- Liese, A., Seelbach, K., Wandrey, C. Industrial Biotransformations. Wiley-VCH Verlag GmbH & Co. KGaA, 2005. (20 %)
- Žnidaršič Plazl, P., Podgornik, H. Vaje iz biotehnologije, 2. Izd. Fakulteta za kemijo in kemijsko tehnologijo, Ljubljana. 2011. 96 p. (15 %)

Cilji in kompetence:

Cilj predmeta je seznaniti študente z možnostmi uporabe biotransformacij z encimi ali celotnimi celicami v industriji, razvijati zavest o pomenu biotransformacij pri načrtovanju okoljsko sprejemljivih procesov in uporabljati inženirske principe za analizo, načrtovanje in razvoj procesov z biokatalizatorji, pri čemer izhajajo iz znanj o molekularnih osnovah ved o življenju ter termodinamike in kinetike reakcije.

Študent si pri predmetu pridobi naslednje specifične kompetence:

- poznavanje uporabe biotransformacij v industrijskih procesih, kmetijstvu in okoljevarstvu
- razumevanje delovanja biokatalizatorjev (celic/encimov) z inženirskega vidika
- sposobnost pridobivanja potrebnih podatkov za izračune v biokemijskem inženirstvu
- sposobnost analiziranja bioloških dejavnikov, ki so pomembni za načrtovanje, delovanje, obnašanje in spremljanje procesov z biokatalizatorji
- osvajanje nekaterih izbranih laboratorijskih tehnik: vodenje in analiza procesa biotransformacije v laboratorijskem merilu, analiza encimske kinetike v mikroreaktorju

Objectives and Competences:

Objectives: To acquaint students with the opportunities to use biotransformations with enzymes or whole cells in the industry, to develop an awareness of the importance of biotransformations in the planning of environmentally acceptable processes and to apply engineering principles to the analysis, design and development of processes with biocatalysts, deriving from knowledge about the fundamental concepts of life sciences, biotransformation thermodynamics and reaction kinetics.

Students obtain the following specific competencies:

- Knowledge of the use of biotransformations in industrial processes, agriculture and environmental engineering
- Understanding of biocatalysts (cells / enzymes) from the engineering point of view
- Ability to obtain necessary data for calculations in biochemical engineering
- The ability to analyze the biological factors that are important for the planning, operation, performance and monitoring of processes with biocatalysts
- Bring in some selected laboratory techniques: management and analysis of the process of biotransformation at the laboratory-scale, analysis of enzyme kinetics in a microreactor

Predvideni študijski rezultati:

Intended Learning Outcomes:

<p><u>Znanje in razumevanje</u> Študent nadgradi osnovna znanja iz ved o življenju z inženirskega vidika in osvoji specifičnosti načrtovanja, vodenja in analize procesov z biokatalizatorji. Razume zakonitosti delovanja encimov oz. celic kot biokatalizatorjev, kar omogoča razumevanje njihove uporabe v biotehnologiji.</p>	<p><u>Knowledge and Comprehension</u> Student will advance the basic knowledge in life sciences from the engineering perspectives and gain the comprehension of specificities of the development, operation, performance and monitoring of processes with biocatalysts. Principles of enzyme function and mechanisms, as well as the use of whole cells as biocatalysts will be adopted.</p>
<p><u>Uporaba</u> Pridobljena znanja je študent sposoben uporabljati pri razvijanju, vodenju in analizi procesov z biokatalizatorji.</p>	<p><u>Application</u> Student will develop the ability to participate in the development, control and analysis of processes with biocatalysts.</p>
<p><u>Refleksija</u> Študent bo interpretiral ter pred kolegi analiziral lastno razumevanje izbranih procesov biotransformacij. Pri tem bo uporabil pridobljena teoretična znanja ter jih vrednotil s praktičnimi izkušnjami.</p>	<p><u>Analysis</u> Student will interpret and analyse the knowledge on selected biocatalytic processes.</p>
<p><u>Prenosljive spretnosti</u> Računalniška obdelava eksperimentalnih podatkov, uporabljanje spletnih virov, pisanje poročil, priprava računalniške predstavitev seminarja, timsko delo</p>	<p><u>Skill-transference Ability</u> Analysis of experimental data, the use of internet as a data source, writing of reports, a seminar preparation and oral presentation, team work.</p>

Metode poučevanja in učenja:

Predavanja, laboratorijske vaje, individualno in skupinsko delo pri pripravi seminarjev. Spletna gradiva za določena poglavja.

Learning and Teaching Methods:

Lectures, seminars, practical training.

Načini ocenjevanja:

Vaje: Oceno vaj sestavljajo sprotno preverjanje znanja in ocene poročil.

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Študent oz. kandidat mora imeti predmet opredeljen kot študijsko obveznost.

Prerequisites:

The course has to be assigned to the student.

Vsebina:

Industrijska ekologija: definicija, vzporednice med industrijskim procesom in biološkimi sistemmi, povezava industrijskih sistemov z naravo in človekom, etika in družbene posledice industrijske proizvodnje in inženirskih odločitev, čistejša proizvodnja kot aplikacija industrijske ekologije v praksi za izboljšanje materialnih in energijskih izkoristkov, pomen celovitega pristopa.

Inženirska orodja industrijske ekologije: preprečevanje onesnaženja, eko-učinkovitost, čistejša proizvodnja, koncept minimizacije, zamenjava surovin, uporaba sekundarnih

Content (Syllabus outline):

Industrial Ecology: definitions, comparison of industrial and natural processes, impacts of industrial processes on the ecosystem and mankind, ethics of industrial production, ethics and social consequences of technical decisions, cleaner production as application of industrial ecology for better resource and energy use, importance of complex approach for solving environmental problems.

Tools for achieving goals of industrial ecology: pollution prevention techniques, eco-efficiency, cleaner production, minimisation concepts, use of secondary renewable raw materials (water

obnovljivih surovin (recikliranje, ponovna uporaba odpadnih vod, priprava površinskih vod za industrijsko izrabbo, razsoljevanje, recikliranje kovin, bioplastika) in virov energije (biogoriva, solarna energija in energija vetra, bioplina), optimizacija procesov, inovativne in zelene tehnologije (sonokemijski, fotokemijski in elektrokemijski procesi, uporaba membranskih tehnik), sodobni materiali v tehnikah za varstvo okolja, trendi razvoja reaktorjev, uporaba multifunkcijskih enot, zelena topila, zaprti krogotoki v procesih, koncept proizvodnje brez odpadkov, zakonodaja.

Optimizacija industrijskega procesa: integrirana strategija preventive, pregled LCA (Life Cycle Assessment) modelov in pristopov k postavitevi mej ter ciljev LCA analize, posledice vključitve različnih metod recikliranja in ekonomskih odločitev v LCA model. Ekooptimizacija proizvodnega procesa in produkta, vrednotenje zmanjšanja vpliva na okolje kot posledica vpeljave sprememb, učinkovit transport, vodenje in nadzor, vključevanje lokalne in širše skupnosti, globalen pristop, koncept trajnosti.

Uporaba koncepta industrijske ekologije na primeru: primer industrije ali izdelka, relevanten času in slovenskemu prostoru.

reuse and recycling, pretreatment of surface waters for industrial purposes, desalination, recycling of metals, bioplastics) and energy (biofuels, solar and wind energy, biogas) optimisation of processes, innovative and green technologies (sonochemistry, photochemistry and electrochemistry, membrane techniques), advanced materials in environmental technologies, trends in reactor development, multi-functional units, green solvents, implementation of closed-loop systems, zero waste management, legislation.

Industrial Ecology Approach: integrated pollution prevention strategies, overview of LCA (Life Cycle Assessment) models and approaches for setting up limits and goals of LCA, consequences of incorporation of different recycling methods and economical decision in LCA model. Eco-optimization of products and processes, evaluation of reduction of environmental impact due to implemented changes, effective transportation, management and importance of local and global society responses, sustainability concept.

Implementation of concept of industrial ecology: A case study with product or process relevant in time and place.

Sposobnost samostojne vpeljave koncepta čistejše proizvodnje.</p>	<p>Awareness on the impacts of incorporating industrial processes into environment. Knowledge on tools and their application necessary for achieving and implementing cleaner production in new and existing industrial systems. Awareness of ethical responsibility and need for constant improvement of the system.</p> <p>Competences:</p> <p>Awareness on the importance of industrial ecology for cleaner production, environment and people. Knowledge on tools, design and implementation of cleaner production concepts Ability to implement the concept of cleaner production.</p>
--	---

Predvideni študijski rezultati:

Znanje in razumevanje

Razumevanje povezav in odnosov med osvojenimi pojmi. Sposobnost vrednotenja vpliva procesov na ljudi in okolje. Znanje za izvedbo LCA in vpeljavo koncepta industrijske ekologije v obstoječ ali nov industrijski proces

Uporaba

Uporaba pridobljenih znanj pri reševanju kompleksnih inženirskih problemov. Sposobnost sinteze in interdisciplinarnega pristopa k reševanju problemov.

Refleksija

Razumeti pomen izbire ustreznih tehnoloških postopkov in surovin za ohranjanje naravnih virov. Kritično vrednotiti vpliv svojega dela na lokalni in globalni ravni. Zavedanje o družbenem vplivu svojih odločitev.

Prenosljive spremnosti

Spretnost uporabe domače in tujе literature. -Spretnost identifikacije problema in pristopa k njegovemu učinkovitemu reševanju. Uporaba ustnega in pisnega načina poročanja. Spretnost sinteze na različnih področjih pridobljenih znanj.

Intended Learning Outcomes:

Knowledge and Comprehension

Understanding relationships between different terms. Ability to evaluate the impact of processes to environment and people. Knowledge on LCA performance. Ability to implement the concept of cleaner production into new or existing industrial process.

Application

Ability of applying acquired knowledge for solving more complex engineering problems. Ability of interdisciplinary approach when solving of problems.

Analysis

Understand the importance of selection of appropriate technologies and raw materials to protect natural resources. Evaluate the work critically on local as well as global basis. Awareness on environmental, economical and ethical consequences of technical decisions.

Skill-transference Ability

Ability to search, select and apply different types of literature. Ability to independently identify various environmental problems and search for solution including broad multidisciplinary approach. Development of oral and literate skills.

**Pogoji za vključitev v delo oz. za opravljanje
študijskih obveznosti:**

Študent oz. kandidat mora imeti predmet
opredeljen kot študijsko obveznost.

Prerequisites:

The course has to be assigned to the student.

Vsebina:

Izbira sodobnih materialov zahteva od
inženirja, da pozna fizikalne, kemijske in
mehanske lastnosti materiala. Mnoge fizikalne
lastnosti, posebej tiste, ki niso odvisne od
mikrostrukture (na primer gostota, elastični
modul, tališče..) tudi niso odvisne od načina
priprave – izdelave. Mnoge mehanske lastnosti
(na primer natezna in zlomna trdnost..) so
odvisne od načina izdelave in mikrostrukture.
Zato mora študent poznati osnovne principe o
lastnostih materialov; kako so odvisni od
mikrostrukture, sestave, kako se spremenjajo s
pripravo, kako korozija spreminja (skrajša) čas

Content (Syllabus outline):

Selection of advanced materials requests from
engineer the knowledge of physical, chemical
and mechanical properties. A number of
physical properties, especially microstructure
insensitive (like density, Young's modulus,
melting point) are processing independent.
On the other side, many mechanical properties
(like tensile and fracture strength..) depend on
microstructure and processing parameters.
Students need to know and understand the
relations of materials properties and
microstructure, how processing parameters
change the properties and how the corrosion
influences material's life time. Engineer must

uporabe in kako so komponente kompatibilne z drugimi materiali v kompleksnih strukturah. Na izbranih aktualnih primerih bodo podane in s študenti diskutirane osnove inženirstva materialov in njihova praktična uporabnost. Težišče bo usmerjeno v:

- kovine postopki izdelave izbranih kovinskih materialov; oblikovanje; toplotna obdelava; kovinski prahovi, prašna metalurgija, razvoj
- keramika in steklo priprava prahov, oblikovanje, sintranje, modifikacija površin, razvoj
- polimeri in kompoziti postopki izdelave izbranih materialov, recikliranje, definicija glavnih tipov kompozitov in kje so uporabni, razvoj
- nanotehnologija sinteza, karakterizacija in uporabnost izbranih nanomaterialov, razvoj

consider also how components are compatible with other materials of complex structures.

Fundamentals of materials engineering, along with their relevant applications, will be presented and discussed with students. Focus will be given to:

- Metals manufacturing of metallic materials and tailoring of their properties; metal-casting processes, heat treatment; metal powders
- Ceramics and Glasses powder preparation, shaping, sintering, tailoring of properties, modification of surfaces
- Polymers and Composites processing techniques, recyclability, general composite types and where composites are typically used, tailoring of properties
- Nanotechnology synthesis, characterization and application of various nanomaterials, development.

Temeljna literatura in viri / Readings:

- I. Chorkendorff and J.W. Niemantsverdriet, Concept of Modern Catalysis, 2. izdaja, Wiley-VCH Verlag, 2007, 457 stani (30 %)

Cilji in kompetence:

Predmet študentu razvija sposobnost analize in sinteze kompleksnih procesov s snovno pretvorbo (reakcijo). Predmet je nadaljevanje predmeta Kemijsko reakcijsko inženirstvo in ponuja znanja, ki so potrebna pri

obravnavanje in načrtovanju procesov ter reaktorjev, v katerih potekajo reakcije z več fazami. Specifične kompetence predmeta so:
- poznavanje, razumevanje in uporaba zakonov o ohranitvi mase, energije in gibalne količine, ko se kemijske pretvorbe odvijajo v večfaznem sistemu.

- poznavanje, razumevanje in uporaba matematičnih zapisov hitrosti kemijskih pretvorb v heterogenih sistemih,
- poznavanje in uporaba zvez med transportom topote in snovi med fazami ter hitrostjo zginevanja snovi na površini katalizatorja,
- poznavanje in uporaba zvez med notranjim transportom in hitrostjo reakcije znotraj poroznega katalizatorja

Objectives and Competences:

Developing competences for carrying out analysis and synthesis of complex reaction processes. The course is a follow-up to the Chemical reaction engineering course and provides the knowledge that is necessary for planning and designing processes in multi-phase reactors. Subject-specific competences include:

- understanding and applying the laws of mass preservation, energy, and momentum when chemical changes occur in multi-phase systems,
- understanding and applying mathematical descriptions of the rate of chemical changes in heterogeneous systems,
- understanding and applying correlations of heat and mass transfer between the phases and the rate of mass disappearance at the catalyst surface,
- understanding and applying correlations between internal transport and the rate of reaction within a porous catalyst.

Predvideni študijski rezultati:

Znanje in razumevanje

Študent spozna osnovne zakonitosti v zapisovanju hitrosti kemijskih in fizikalnih sprememb na infinitizemalni ravni reaktorja

Intended Learning Outcomes:

Knowledge and Comprehension

Student becomes aware of fundamental principles of formulating the rate laws on the molecular level within the infinitesimal reactor volume. He

vendar na molekularni skali. Razume, da le integracija po prostoru reaktorja daje zvezo med obratovalnimi pogoji in dobitkom na makro skali.	understands that the integration over the whole reactor space provides the performance equation(s), which relates the operational conditions to the reactor yield.
Uporaba Ta znanja mu omogočajo analizo obratovanja obstoječih in načrtovanje novih reaktorjev za vodenje enostavnih reakcij in reakcij v sistemu z več fazami.	Application Possessing sufficient fundamental knowledge student can analyze the operation of simple existing reactors and understand the design of a new one.
Refleksija Študent je sposoben povezati znanja iz matematike, fizike, kemije, transportnih pojavov in pridobiti poglobljeno sliko o dogajaju v reaktorju na mikro nivoju. Pri zahtevnem načrtovanju kemijskih reaktorjev in drugih procesnih naprav, je ta sposobnost potrebna tudi za komuniciranje/sodelovanje z drugimi tehniškimi strokovnjaki.	Analysis Student is capable of using the knowledge of chemical kinetics and transport phenomena to formulate the reactor model and thus obtain a deeper insight on the processes on micro as well as macro reactor scale. This ability is also appreciated for communication and cooperation with materials and other engineering professionals.
Prenosljive spremnosti Študent je usposobljen tako za eksperimentalno delo na področju katalitskih procesov kot za strokovno delo pri prenašanju eksperimentalnih rezultatov in literaturnih podatkov v industrijsko praks. Sposoben je analizirati obstoječe naprave, določiti optimalne pogoje obratovanja in načrtovati nove reaktorje za heterogene reakcijske sisteme.	Skill-transference Ability Developed skills of integrating fundamental chemical and engineering knowledge into processes that are taking place within a multiphase chemical reactor.

3. Concrete – Microstructure, Properties, and Materials, P.Kumar Mehta, Paulo J.M.Monteiro, 4th ed., McGraw-Hill Education, 2014, 675 strani (20%)

Cilji in kompetence:

Cilji:

Predmet študente spoznava s področjem anorganskih nekovinskih materialov, ki je pomembno za številne slovenske industrijske organizacije. Vsebina predmeta uvaja študente v sestavo, strukturo, vrste in lastnosti ter tehnologije izdelave keramik in stekel. Seznanja ga z osnovnimi kemijskimi in fizikalnimi lastnostmi, principi izdelave in procesiranjem ter z načini uporabe anorganskih nekovinskih materialov. Predmet podaja tudi osnovna znanja o glazurah in emajlih ter hidravličnih vezivih.

Specifične kompetence:

Med izvajanjem predmeta se bo študent naučil logično povezovati sestavo in strukturo anorganskih nekovinskih materialov ter jih povezati z lastnostmi in možnostmi uporabe. Seznanil se bo tudi z vrstami in mehanizmi utrjevanja hidravličnih veziv s poudarkom na cementih. S tem bo pridobil znanja, ki jih lahko uporabi v proizvodnih in razvojnih enotah s področja materialov.

Objectives and Competences:

Introduction to inorganic non-metal materials, relevant to Slovenian industry. Students learn about the composition, structure, types, properties and technology of making ceramics and glass. This involves basic chemical and physical properties, technological principles and processing and applications of inorganic non-metal materials. The course provides bases on glazes and enamels and hydraulic binders.

Subject-specific competences include:

Making logical correlations between the composition and structure of inorganic non-metal materials and properties with possible applications; types and mechanisms of hardening of hydraulic binders with special emphasis on cements; making use of the knowledge acquired in processing and development units in the area of materials.

Predvideni študijski rezultati:Znanje in razumevanje

Predmet študentu daje znanje potrebno za razumevanje strukture in lastnosti keramike in stekel ter procesov njihove izdelave.

Uporaba

Študent pridobi ustrezna osnovna znanja za razvojno in/ali tehnološko delo v različnih industrijskih ali raziskovalnih institucijah.

Refleksija

Študent bo pridobil teoretična spoznanja s področja anorganskih nekovinskih materialov, ki jih bo lahko praktično uporabil v tehnologiji.

Prenosljive spretnosti

Iskanje primerne literature in pisanje seminarских nalog; kritična izbira informacij iz literature za opis in razlago specifičnega problema; predstavitev seminarjev ostalim študentom.

Intended Learning Outcomes:Knowledge and Comprehension

Knowledge needed to correlate structure and processing parameters with properties of ceramics and glasses.

Application

Students obtain necessary basic knowledge for integration in R&D and engineering groups in industrial and R&D institutions.

Analysis

Students should be able to use theoretical knowledge in the field of ceramics, glasses and concrete for solving technological problems.

Skill-transference Ability

Literature search; preparation and presentation of seminars; critical evaluation and selection of important data from literature for given specific problem.

Metode poučevanja in učenja:

Predavanja in seminarji.

Learning and Teaching Methods:

Lectures and seminar.

Vaje / Tutorial: /

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Študent oz. kandidat mora imeti predmet opredeljen kot študijsko obveznost.

Prerequisites:

The course has to be assigned to the student.

Vsebina:

- osnove modeliranja procesov;
- sistematični pristop k modeliranju procesov;
- zapis ohranitvenih enačb (snov, energija, gibalna količina);
- kemijska kinetika, kemijsko in fazno ravnotežje;
- osnove procesne dinamike;
- meritve in odziv procesa;
- odziv sistema prvega reda na stopenjsko in sinusno spremembo;
- odzivi višjega reda;
- osnove avtomatske regulacije (regulacija z negativno povratno vezjo, proporcionalno-integrirno-diferencirna (PID) regulacija, časovni odziv linearnih regulacijskih sistemov, načrtovanje in uglasitev regulatorja);

Content (Syllabus outline):

- modelling fundamentals;
- systematic approach to modelling of processes;
- balancing equations;
- chemical kinetics, chemical and phase equilibrium;
- process dynamics fundamentals;
- measurement and process response;
- first-order response to an input step-change and sinusoidal disturbance;
- higher-order responses;
- fundamentals of automatic control (feedback control loop , Proportional-Integral-Derivative (PID) control,
- response time of linear control systems, design and tuning of the regulator);

- vključitev konstitutivnih zvez regulacije v modelne enačbe za opis procesov;
- simulacija, regulacija in optimizacija izbranih dinamičnih procesnih sistemov.

- integration of constitutive relationships of regulation into model equations for process description;
- simulation, regulation and optimization of selected dynamic process systems.

Temeljna literatura in viri / Readings:

- J. Ingham, I. J. Dunn, E. Heinze, J. E. Prenosil, J. B. Snape, Chemical engineering dynamics: An introduction to modelling and computer simulation, 3. Ed, Wiley-VCH Verlag GmbH and Co. KgaA, Weinheim, 2007, 618 pp., (30 %),
- D. E. Seborg, T. F. Edgar, D. A. Mellichamp, Process Dynamics and Control, 2. Ed, John Wiley & Sons, New York, 2004, 664 pp., (40 %)

Cilji in kompetence:

Cilj predmeta je, da študentje osvojijo znanja, potrebna za analizo in vodenje zahtevnejših realnih kemijskih procesov.

Študentje pri predmetu pridobijo naslednje specifične kompetence:

- poznavanje osnov modeliranja procesov;
- poznavanje načinov regulacije procesov;
- poznavanje konstitutivnih zvez regulacije in njihova vključitev v modelne enačbe realnih procesnih sistemov;
- sposobnost simulacije, regulacije, optimizacije in avtomatizacije procesnih sistemov.

Objectives and Competences:

Acquiring knowledge for the analysis and management of complex real chemical processes.

Subject specific competences include:

- modelling fundamentals;
- process regulations;
- constitutive relationships of regulation and integration into model equations of real process systems;
- simulation, regulation, optimisation and automation of process systems.

Predvideni študijski rezultati:

Znanje in razumevanje

Študent zna identificirati ključne dejavnike pri nadzoru kemijskih procesov, sposoben je pridobljena znanja uporabljati pri vzdrževanju in izboljševanju varnosti in ekonomičnosti obratovanja kemijskih obratov, sposoben je optimizirati obstoječe kemijske procese.

Uporaba

Pridobljena znanja je sposoben uporabiti pri razvojnem in raziskovalnem delu na področjih razvoja in optimizacije procesov.

Refleksija

Na osnovi osvojenih teoretičnih znanj študentje pridobijo veštine za analizo (bio)kemijskih procesov in prenos znanja v tehnički proces.

Intended Learning Outcomes:

Knowledge and Comprehension

Students will acquire a systematic approach to modeling of dynamic processes.

Application

Possessing sufficient fundamental knowledge student can theoretically describe and optimize the process.

Analysis

Student is capable of using the knowledge of transport phenomena and kinetics to develop mathematical models and design the processes. This ability is also appreciated for

	communication and cooperation with other engineering professionals.
Prenosljive spremnosti Razvita sposobnost kritičnega razmišljanja in logičnega sklepanja. Sposobnost zbiranja in interpretacije podatkov.	Skill-transference Ability Identification and solving of problems. Experimental data collection, analysis and critical evaluation of results. The use of scientific literature, writing and presentation of reports.

- C.J.M. van Rijn, *Nano and Micro Engineered Membrane Technology*, 1. Ed, Elsevier B.V., Amsterdam, 2004, 398 pp.

Cilji in kompetence:

Cilj predmeta je, da študentje osvojijo osnove mikroprocesne tehnologije, ki predstavlja nov koncept v kemijsko inženirski znanosti, in nadgradijo svoja znanja iz področja fluidne dinamike, prenosa toplote in snovi, reakcijske kinetike in numeričnih orodij.

Študentje si pri predmetu pridobijo naslednje specifične kompetence:

- poznavanje mikroreaktorske tehnologije;
- poznavanje nano in mikro mebranske tehnologije;
- poznavanje mikrofluidne dinamike;

Objectives and Competences:

Acquiring fundamentals of microprocess technology which is a new concept in chemical engineering science, upgrading knowledge in fluid dynamics, heat and mass transfer, reaction kinetics and numerical tools.

Subject-specific competences include knowledge and skills for dealing with:

- microreactor technologies;
- nano and micro membrane technologies;
- microfluid dynamics;
- reaction diffusion dynamics in microsystems;

- poznavanje reakcijsko difuzijske dinamike v mikrosistemih;
- sposobnost postavitve modelnih enačb za opis (bio)kemijskih procesov v mikroreaktorju;
- poznavanje numeričnih metod za reševanje kompleksnih večdimenziskih nelinearnih sistemov na geometrijah nepravilnih oblik;
- sposobnost numeričnih simulacij in analize realnih procesov v mikrosistemih;
- sposobnost optimizacije procesov in načrtovanja mikronaprav;
- sposobnost uvajanja mikroprocesnih tehnoloških rešitev realnih problemov.

- setting up model equations for describing (bio)chemical processes in a microreactor;
 - numerical methods for solving complex multidimensional non-linear systems in irregular shape geometries;
 - numerical simulations and analyses of real processes in microsystems;
 - Process optimisation and designing micro equipment;
- implementing microprocess technological solutions to real problems.

Predvideni študijski rezultati:

Znanje in razumevanje

Študentje pridobijo splošna znanja o mikroreaktorski tehnologiji in dodatna znanja iz mikrofluidne in reakcijsko difuzijske dinamike v mikroreaktorju. Poleg tega nadgradijo svoja znanja iz numeričnih orodij, ki so potrebna pri kemijsko inženirski analizi (bio)kemijskih procesov v mikronapravah. Študentje pridobijo tudi temeljna znanja iz nano in mikro membranskih tehnologij.

Uporaba

Uporaba načel mikrofluidne dinamike in reakcijsko difuzijskih pojavov v mikrosistemih študentom omogoča matematično fizikalni opis problemov. Aplikacija zahtevnejših numeričnih metod v matematično programskih orodjih jim omogoča reševanje in analizo nastavljenih realnih problemov. Študentje tako pridobijo uporabna znanja za opis (bio)kemijskih procesov in načrtovanje mikronaprav pri razvoju novih produktov.

Refleksija

Študentje so sposobni samostojno sklepati, definirati problem, postavljati zaključke in probleme reševati.

Prenosljive spremnosti

Študentje znajo identificirati in reševati probleme, sposobni so zbiranja in interpretacije podatkov, kritične analize in sinteze pridobljenih znanj.

Intended Learning Outcomes:

Knowledge and Comprehension

Students will acquire a systematic approach to modeling of dynamic processes.

Application

Possessing sufficient fundamental knowledge student can theoretically describe the convection-diffusion dynamics with reaction at the micro scale and design the microreactor.

Analysis

Student is capable of using the knowledge of transport phenomena and kinetics at the micro scale to design the micro flow devices for process intensification.

Skill-transference Ability

Identification and solving of problems. Experimental data collection, analysis and critical evaluation of results. The use of scientific literature, writing and presentation of reports.

Metode poučevanja in učenja:

Predavanja, seminarske naloge

problem. Pri delu bodo pokazal, da je pridobil večino kompetenc navedenih v programu študija.

finding solutions, thus proving that specific competences from other courses have been acquired.

Predvideni študijski rezultati:

Znanje in razumevanje

Pri izdelavi magistrskega dela bo slušatelj pridobil:

- sposobnosti formuliranja problema,
- sposobnosti samostojnega iskanja ustrezne literature,
- sposobnosti obravnavanja problema v praksi,
- sposobnosti iskanja kvantitativnih rešitev in utemeljevanja ustreznosti rešitev,
- sposobnosti predstavitev rezultatov svojega dela.

Uporaba

Znanje in pridobljene veščine bo magistrant lahko uporabil pri opravljanju poklica.

Refleksija

Povezovanje vseh pridobljenih teoretičnih znanj z reševanjem problemov na področju kemijskega inženirstva ter kritični pogled na uporabnost teh znanj.

Prenosljive spremnosti

Pri delu bo magistrant pridobil znanja o metodah reševanja kompleksnih problemov, o načinu prezentacije teh znanj v pisani in govorjeni obliki povezani z ostalimi metodami posredovanja raziskav, ugotovitev itd.

Intended Learning Outcomes:

Knowledge and Comprehension

Ability to formulate the problem and research literature independently; Ability of independent problem managing in practice; Ability of independent quantitative problem solving and argumentation of the solution; Ability of presenting results of research work.

Application

Acquired is necessary for professional work.

Analysis

Integration of knowledge from different topics from chemical engineering and supporting sciences; Development of a critical view on the knowledge applicability.

Skill-transference Ability

Ability of solving complex problems using different methods; Ability of presenting research results in a written and oral form.

Metode poučevanja in učenja:

Individualno delo mentorja in samostojno študijsko in raziskovalno delo.

Learning and Teaching Methods:

Independent research work supervised by the mentor.

Delež (v %) /

Načini ocenjevanja:

Weight (in %) **Assessment:**

Ocenjuje se magistrsko delo (50 %) in zagovor magistrskega dela (50 %) Komisijo sestavljajo predsednik, mentor in član. Lestvica ocen vsakega dela je od 1 do 10. Ocene 1 do 5 so negativne, ocene 6 do 10 pa

Master's thesis and its presentation are graded separately by a three-member commission (chairman, mentor, additional member) against the grading scale from 1- 10 (grades from 6 – 10 are positive and 1 -5 negative (6-pass, 7-fair, 8 and 9-very good, 10-excellent).

pozitivne in sicer: 6--zadostno, 7-- dobro, 8 in 9--prav dobro, 10-- odlično.

Jeziki / Languages:	Predavanja / Lectures: slovenski / Slovenian
	Vaje / Tutorial: slovenski / Slovenian

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Študent oz. kandidat mora imeti predmet opredeljen kot študijsko obveznost.

Prerequisites:

The course has to be assigned to the student.

Vsebina:

Temeljna vsebinska področja predmeta so:

- sinteza procesa: strategija in konceptualno načrtovanje, dekompozicijske in hevristične strategije;
- pinch analiza: termodinamika, mreža toplotnih izmenjevalcev;
- preliminarna analiza procesa: poenostavljene snovne in energijske bilance, prostostne stopnje, »short cut« metode, algoritmi za reševanje procesnih shem;
- integracija procesa: toplotni stroji, toplotne črpalke, separatorji, reaktorji;
- načrtovanje procesov z uporabo pinch tehnologije, nizanje separatorjev, sinteza toplotnih izmenjevalcev;
- modeli in algoritmi za osnovne operacije;

Content (Syllabus outline):

Basic content of the course:

- process synthesis: strategy and conceptual design, decomposable and heuristic strategies,
- pinch analysis: thermodynamics, network of heat exchangers,
- preliminary process analysis: simplified mass and heat balances, degree of freedom, short cut methods, algorithms for solving process schemes,
- process integration: heat engines, heat pumps, separators, reactors,
- process design by pinch technologies, series of separators, synthesis of heat exchangers,
- models and algorithms for unit operations,
- economic process evaluation: equipment and costs,

- ekonomska evalvacija procesa: oprema in stroški, preračuni finančnih tokov;
- simulacijski koncepti načrtovanja procesov: modularni in sekvenčni pristop, analiza procesnih shem;
- numerične metode za velike sisteme nelinearnih algebraičnih enačb.

- simulation concept of process design, analysis of process schemes,
- numerical methods for solving large systems of nonlinear equations.

Temeljna literatura in viri / Readings:

- W. D. Seider, J. D. Seader, D. R. Lewin, *Process Design Principles: Synthesis, Analysis and Evaluation*, John Wiley & Sons, Inc., New York, 1998, 824 str., (40 %).
- L. T. Biegler, I. E. Grossmann, A. W. Westerberg et al., *Systematic Methods of Chemical Process Design*, Prentice Hall, 1997, 700 str., (20 %).

Cilji in kompetence:

Cilj predmeta je, da študentu ponudi znanja, ki so potrebna za integralno načrtovanje kemijskih procesov. Študentje pri predmetu pridobijo naslednje specifične kompetence:

- sposobnost analize in sinteze procesov;
- integracija procesnih aparatov v procesne sheme;
- sposobnost načrtovanja enostavnnejših kemijskih procesov.

Objectives and Competences:

Course provides knowledge that is needed in its integral approach to the chemical process design. Student gains the following specific competences: ability to analyze and synthesize processes, integrate individual apparatuses into a process scheme, ability to design a simple chemical process.

Predvideni študijski rezultati:

Znanje in razumevanje

Študent zna identificirati ključne dejavnike pri sintezi in analizi kemijskih procesov, sposoben je pridobljena znanja uporabljati pri načrtovanju kemijskih obratov s stališča procesne opreme in ekonomike procesa.

Intended Learning Outcomes:

Knowledge and Comprehension

Student is able to identify and understand key issues in the synthesis and analysis of chemical processes and use a newly gained knowledge in the design of chemical plants from the point of process equipment and process economics.

Uporaba

Pridobljena znanja je sposoben uporabiti pri načrtovanju novih in analizi obstoječih procesov.

Application

Possessing sufficient knowledge student can design new and analyze existing processes.

Refleksija

Na osnovi osvojenih teoretičnih znanj študentje pridobijo veštine za analizo (bio)kemijskih procesov in prenos znanja v tehnološki proces.

Analysis

Theoretical knowledge gained during the course can be efficiently transferred into new technological routes of chemical processes.

Prenosljive spretnosti

Razvita sposobnost integracije temeljnih kemijsko inženirskega znanja.

Skill-transference Ability

Well-developed skills of integrating fundamental chemical engineering knowledge into industrial processes.

- J. H. Koo, Polymer nanocomposites: processing, characterization, and applications. McGraw-Hill Professional, New York, 2006, 261 str.

Cilji in kompetence:

Cilj predmeta je, da študentje osvojijo osnovna znanja o novih, naprednih materialih, ki v zadnjem desetletju predstavljajo revolucijo in perspektivo na področju znanosti o materialih.
Študentje pri predmetu pridobijo naslednje specifične kompetence:
- poznavanje definicije nanomaterialov, nanokompozitov in nanostrukturiranih materialov;
- poznavanje osnovnih vrst nanostrukturiranih materialov,
- poznavanje metod in procesov za pripravo vseh vrst nano materialov,
- poznavanje karakterizacije nano materialov,
- poznavanje možnosti teholoških aplikacij vseh vrst nano materialov.

Objectives and Competences:

Acquiring the knowledge and ability for further studies and research of nanomaterials, relating the basic differences of these materials to bulk materials to the size and quantum effects, knowing basic methods and processes for their preparation and characterization, foreseeing possible use of such materials.
Acquiring fundamental knowledge about nanomaterials and nanocomposites which represent a revolution and open new perspectives in the field of material science.

Predvideni študijski rezultati:

Intended Learning Outcomes:

Znanje in razumevanje Študent bo znanja s področja klasičnih materialov razširil na nanopodročje, tj. nanomateriale, nanokompozite, nanostrukturirane materiale. Razumel bo izvor nano-efekta pri nanomaterialih.	Knowledge and Comprehension Extension of knowledge in the area of materials with knowledge specific to nanomaterials, nanocomposites and nanostructured materials. Understanding the nanoeffect.
Uporaba Specifične lastnosti nanomaterialov, nanokompozitov in nanostrukturiranih materialov bo analiziral glede na potencialne možnosti za njihovo uporabo in pri pri načrtovanju novih materialov.	Application Designing novel, advanced nanomaterials, nanocomposites and nanostructured materials for specific applications.
Refleksija Študent bo specifična znanja o nanomaterialih koreliral s klasičnimi materiali, tako glede njihovih osnovnih lastnosti kot tudi metod oziroma procesov za njihovo pripravo ter uporabo.	Analysis Correlation and comparison of specific properties of nanomaterials and nanocomposites with properties, preparation methods and applications of classic materials and composites.
Prenosljive spretnosti Iskanje domače in tuje literature iz različnih virov, zbiranje, obdelava in interpretacija podatkov, analiza in sinteza rezultatov, pisanje člankov ipd.	Skill-transference Ability Literature research; Literature data collecting, analysis and interpretation; Results analysis and interpretation; Project work presentation.

- T. C. Patton, *Paint Flow and Pigment Dispersion: A Rheological Approach to Coating and Ink Technology*, 2. izdaja, John Wiley & Sons, Inc., New York, 1979, 615 str.

Cilji in kompetence:

Cilj predmeta je, da študentje osvojijo različne stopnje razvoja organskih premazov.

Študentje pri predmetu pridobijo naslednje specifične kompetence:

- poznavanje nastanka oz. formiranja premaznega filma;
- poznavanje tokovnih lastnosti različnih premazov;
- poznavanje ključnih lastnosti premazov in premaznih filmov z vidika njihove uporabe;
- poznavanje premaznih komponent in njihove vloge;
- poznavanje načina aplikacije premazov;
- razumevanje izbranih primerov formulacij in priprave organskih premazov;
- razumevanje povečevalnih kriterijev in prenos tehnologije v proizvodnjo.

Objectives and Competences:

Understanding the formation of coatings.
Understanding flow characteristics of various coatings. Knowing key characteristics of coatings from the application perspective.
Knowing coating components and their roles.
Knowing the application of coatings.
Understanding selected cases of formulation and preparation of organic coatings.
Understanding the scale-up criteria and transfer of a technology to production.

Predvideni študijski rezultati:

Znanje in razumevanje

Študent osvoji znanja o lastnostih organskih premazov in njihovih filmov. Razume nastanek premaznega filma. Razume vpliv sestave premaza na lastnosti premaza in premaznega filma. Pozna osnovno formulacijo premaza. Pozna povečevalne kriterije za prenos tehnologije v proizvodni proces.

Uporaba

Pridobljena znanja je študent sposoben uporabiti pri svojem raziskovalnem delu na področju razvoja in optimizacije organskih premazov.

Intended Learning Outcomes:

Knowledge and Comprehension

Understanding different levels in the development of organic coatings.

Application

Student is able to apply the knowledge at independent research and development work in the area of organic coatings development and optimization.

Refleksija Študent je sposoben sintetizirati znanja s področij polimerne kemije, polimernih materialov ter produktnega inženirstva.	Analysis Student is able of synthesis of polymer chemistry, polymer materials and product engineering scientific fields.
Prenosljive spremnosti Študent je sposoben uporabljati tujo in domačo strokovno literaturo. Sposoben je samostojno sklepati, definirati problem, postavljati zaključke in problem reševati. Sposoben je zbirati in obdelovati podatke, predstaviti rezultate v pisni in ustni obliki. **Pogoji za vključitev v delo oz. za opravljanje
študijskih obveznosti:**

Študent oz. kandidat mora imeti predmet
opredeljen kot študijsko obveznost.

Prerequisites:

The course has to be assigned to the student.

Vsebina:

Temeljna vsebinska področja predmeta so:
 - teorija in praktična uporaba enačb za
ohranitev mase, gibalne količine in energije;
 - reološko, termodinamsko in tribološko
obnašanje polimernih materialov;
 - taljenje, črpanje in mešanje polimernih
materialov;
 - kompaundiranje;
 - kompresijsko brizganje, injekcijsko brizganje,
ekspanzijsko brizganje;
 - kalandriranje;
 - ekstrudiranje: tok taline, zadrževalni čas,
deformacije, dimenzioniranje ekstruderja,
povečevanje ekstruzijskega procesa na osnovi
modelne teorije.

Content (Syllabus outline):

Theoretical and practical use of conservation
equations (mass, heat and momentum).
Rheological, thermodynamic and tribological
behaviour of polymer materials. Polymer
melting, pumping and mixing. Compounding.
Compression moulding, injection moulding,
expansion moulding. Calendering. Extrusion:
melt flow, dwell times, deformations, extruder
dimensioning and design, scale-up of extrusion
process by the help of model theory.

Temeljna literatura in viri / Readings:

- N. G. McCrum, C. P. Buckley, C. B. Bucknall, Principles of Polymer Engineering, 2. izdaja, Oxford University Press, New York, 1997, 390 str., (80 %).
- Z. Tadmor in C. G. Gogos, Principles of Polymer Processing, John Wiley & Sons, Inc., New Jersey, 2006, 886 str., (60 %).

Cilji in kompetence:

Cilj predmeta je, da študentje osvojijo znanja o procesih in opremi na področju polimernega procesnega inženirstva.

Študentje pri predmetu pridobijo naslednje specifične kompetence:

- poznavanje in razumevanje matematičnih zapisov za ohranitev mase, gibalne količine in energije;
- poznavanje reološkega, termodinamskega in tribološkega obnašanja materialov;
- poznavanje procesov (taljenje, črpanje, mešanje, kompaundiranje, kompresijsko brizganje, injekcijsko brizganje, ekspanzijsko brizganje, kalandriranje, ekstrudiranje);
- poznavanje osnov dimenzioniranja procesnih naprav v polimerinem procesnem inženirstvu;
- poznavanje in razumevanje povečevalnih kriterijev in modelnih teorij za ekstruzijski proces

Objectives and Competences:

Ability to write down and understand mathematical equations for description of conservation equations (mass, heat and momentum). Acquisition of knowledge about rheological, thermodynamic and tribological behaviour of materials. Acquisition of knowledge about processes such as melting, pumping, mixing, compounding, compression moulding , injection moulding, expansion moulding, calendering, extrusion. Acquisition of basic knowledge about equipment design in polymer engineering. Acquisition of knowledge about scale-up criteria and model theories for extrusion.

Predvideni študijski rezultati:

Znanje in razumevanje

Študent pozna procese in naprave na področju polimernega procesnega inženirstva ter razume njihovo delovanje. Razume osnove dimenzioniranja polimernih procesnih naprav.

Uporaba

Pridobljena znanja je sposoben uporabiti pri razvojnem in raziskovalnem delu na področju procesiranja različnih polimernih materialov ter pri uporabi in načrtovanju procesnih naprav.

Refleksija

Študent je sposoben sintetizirati pridobljena znanja z znanji o polimernih materialih in transportnih pojavih. Pridobljeno znanje mu omogoča aktivno sodelovanje in komunikacijo s strokovnjaki z drugih tehniških ved na

Intended Learning Outcomes:

Knowledge and Comprehension

Acquiring knowledge about the processes and equipment used in polymer process engineering.

Application

Student is able to apply the knowledge at independent research and development work in the area of polymer processing and at design and use of process equipment.

Analysis

Student is able of synthesis polymer materials and transport phenomena. Acquired knowledge enables communication with experts from other technical research.

zahtevnem področju načrtovanja procesnih naprav.	
<u>Prenosljive spretnosti</u> Študent je sposoben je uporabljati strokovno in (domačo in tujo) literaturo. Sposoben je zbiranja in interpretiranja podatkov. Sposoben definirati problem in ga reševati.	<u>Skill-transference Ability</u> Ability to identify and solve problems, to collect and interpret data, to analyse results critically and to synthesize knowledge.

- J. M. Asua, Polymer reaction engineering, Blackwell Publishing LTD, Oxford, 356 str. (40 %).
- N. A. Dotson, R. Galvan, R. L. Laurence, M. Tirrell, Polymerization Process Modelling, VCH, New York, 1996, 359 pages, (20 %).

Dopolnilna literatura:

- R. G. Gilbert, Emulsion Polymerization: A Mechanistic Approach, Academic Press, London, 1995, 341 pages.
- T. Meyer in J. Keurentjes, Handbook of Polymer Reaction Engineering, Wiley-VCH, Weinheim, 2005, 1083 pages.

Cilji in kompetence:

Cilj predmeta je, da študentje osvojijo pomen in vlogo reakcijskega inženirstva na področju polimerizacijskih procesov.

Študentje pri predmetu pridobijo naslednje specifične kompetence:

- poznavanje reakcijske kinetike polikondenzacij in vpliva procesnih pogojev na kinetiko;
- poznavanje reakcijske kinetike radikalne polimerizacije in vpliva procesnih pogojev na kinetiko;
- poznavanje reakcijske kinetike polimerizacijskih procesov v heterogenih sistemih;
- razumevanje vpliva transporta gibalne količine, snovi in toplote na sintezo polimerov;
- razumevanje modeliranja polimerizacijskih schem;
- poznavanje kinetičnega modeliranja polimerizacijskih procesov;
- razumevanje uporabe matematičnih modelov za načrtovanje procesnih naprav;
- razumevanje povečevalnih kriterijev, specifičnih za posamezne polimerizacijske procese.

Objectives and Competences:

Understanding the importance and role of reaction engineering in polymerization processes; Acquisition of knowledge about step-growth polymerization kinetics and about the effect of process parameters on kinetics; Acquisition of knowledge about chain-growth polymerization kinetics and about the effect of process parameters on kinetics; Acquisition of knowledge about kinetics in heterogeneous polymerization systems; Understanding of effects of momentum, mass and heat transport on polymer synthesis; Understanding the principles of polymerization scheme modelling; Ability to model the kinetics of polymerization processes; Understanding the implementation of mathematical models in reactor and process equipment design; Understanding the scale-up criteria for specific polymerization processes.

Predvideni študijski rezultati:Znanje in razumevanje

Študent zna samostojno analizirati polimerizacijski proces in ga kvantitativno zapisati. Zapisane modele zna uporabiti za analizo, načrtovanje in optimizacijo različnih polimerizacijskih procesov.

Uporaba

Pridobljena znanja je sposoben uporabiti pri samostojnem razvojnem in raziskovalnem delu na področjih analize, načrtovanja in optimizacije procesov.

Refleksija

Študent je sposoben samostojno sklepati, definirati problem, postavljati zaključke in probleme reševati.
Znanje polimernega reakcijskega inženirstva mu omogoča aktivno sodelovanje in komunikacijo s strokovnjaki drugih tehniških in naravoslovnih ved.

Prenosljive spretnosti

Zna identificirati in reševati probleme, sposoben je zbiranja in interpretacije podatkov, kritične analize in sinteze pridobljenih znanj.

Intended Learning Outcomes:Knowledge and Comprehension

Ability of independent polymerization process analysing and quantitative describing; Ability of employing theoretical mathematical models for analysis, design and optimization of polymerization processes.

Application

Acquired knowledge is necessary for independent research and development in the area of process analysis, design and optimization.

Analysis

Development of abilities of autonomous deducting, problem defining, problem solving, and coming to conclusions; Ability to communicate and cooperate with experts from familiar and other engineering and natural sciences.

Skill-transference Ability

Ability to identify and solve problems, to collect and interpret data, to analyse results critically and to synthesize knowledge.

Metode poučevanja in učenja:

Predavanja, seminarji, vaje.

Learning and Teaching Methods:

Lectures, seminars, laboratory practice.

Delež (v %) /

Weight (in %) **Assessment:**

Načini ocenjevanja:

Pisni izpit.

Opravljene vaje in seminarska naloga so pogoj za pristop k izpitu.

Written exam.

Laboratory practice and project work are prerequisites to exam attendance.

kombinacijo ovrednotenja tehnologije, vpliva na okolje in ocene nevarnosti za okolje. Sposobnost integracije koncepta trajnostne zaščite okolja v proizvodne, ekonomske in vodstvene odločitve.	Competences: Knowledge on identification and determination of hazardous environmental impact assessment. Knowledge on complex management of industrial emissions and cost-effective processes which minimize pollution at a source, and/or reduce impact on health and the environment. Ability to understand integrated pollution prevention practices.
---	---

Predvideni študijski rezultati:

<u>Znanje in razumevanje</u> Samostojna uporaba inženirskih orodij in znanj za ekonomsko in državljensko sprejemljivo reševanje okoljskih problemov.
<u>Uporaba</u> Uporaba pridobljenih znanj pri reševanju kompleksnih inženirskih problemov. Sposobnost načrtovanja zahtevnih pristopov in eksperimentov ter ovrednotenja rezultatov, na podlagi katerih lahko načrtuje inženirske rešitve problemov.
<u>Refleksija</u> Razumeti svojo etično odgovornost. Kritično vrednotiti vpliv svojega dela na lokalni in globalni ravni.
<u>Prenosljive spremnosti</u> Spretnost uporabe domače in tujje literature. Spretnost identifikacije problema in pristopa k njegovemu učinkovitemu reševanju. Spretnost izvedbe in ovrednotenje zahtevnih meritev. Uporaba ustnega in pisnega načina poročanja. Delo v skupinah.

Intended Learning Outcomes:

<u>Knowledge and Comprehension</u> Ability to apply engineering approach to solve various complex environmental problems in cost-effective manner with ethical responsibility within social context.
<u>Application</u> Ability of quantification of problems and solving more complex environmental problems. Design of complex approaches and experiments and evaluation of results for design or optimisation of adequate solutions of actual problems.
<u>Analysis</u> Understand the environmental, economic and ethic consequences of technical decisions. Evaluate the work critically.
<u>Skill-transference Ability</u> Ability to search, select and apply different types of literature. Ability to independently identify various environmental problems and search for solution. The ability to design, perform and evaluate complex measurements. Development of oral and literate skills.

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Študent oz. kandidat mora imeti predmet opredeljen kot študijsko obveznost.

Prerequisites:

The course has to be assigned to the student.

Vsebina:

1. Uvodni del
Definicija korozije, osnovna terminologija, metode obravnavanja korozijskih fenomenov, osnovne oblike korozije, gospodarske posledice korozije
2. Koroziska termodynamika in kinetika v vodnih raztopinah
Elektrokemijski potencial, Pourbaixovi diagrami, Električni dvosloj, Butler-Volmerjeva enačba, Koncept mešanega potenciala, koroziski tok in potencial, procesi pasivacije
3. Koroziski mehanizmi

Content (Syllabus outline):

1. Introduction
Definition of corrosion, basic terminology, dealing with corrosion phenomena, forms of corrosion, impacts on the economy
2. Corrosion thermodynamics and kinetics in aqueous solutions
Electrochemical potential, Pourbaix diagrams, Electrical double layer, Butler-Volmer equation, Concept of mixed potential, corrosion flow and potential, passivation processes
3. Corrosion mechanisms
Uniform, pitting, intercrystalline, concentration-cell corrosion, cavitation, stress, gas corrosion, hydrogen brittleness, etc.

<p>Enakomerna, jamičasta, interkristalna, galvanska, kavitacijska, napetostna, plinska korozija, vodikova krhkost ipd.</p> <p>4. Splošne metode proučevanja korozijskih pojavov</p> <p>Elektrokemijske metode (potenciodinamična, Taflova analiza, polarizacijska upornost, ciklična voltammetrija, anodna reaktivacijska polarizacija, impedančna spektroskopija), ultrazvočna metoda, optične metode, standardne metode za preiskavo specifičnih korozijskih oblik (interkristalna, kavitacijska, napetostna, špranjška)</p> <p>5. Korozija in pasivacija pomembnejših kovin Železo in jekla, aluminij, cink, baker</p> <p>6. Korozija polimerov</p> <p>7. Korozija betonov</p> <p>8. Zaščita pred korozijo I – barvni premazi</p> <p>9. Zaščita pred korozijo II – galvanizacija</p> <p>10. Zaščita pred korozijo III – energetski objekti</p> <p>11. Zaščita pred korozijo IV – ekstremni pogoji</p>
--

4. Common methods for studying corrosion
Electrochemical methods (potentiodynamic, Tafel analysis, polarization resistance, cyclic voltammetry, anode reactivation polarisation, impedance spectroscopy), ultrasound method, optical methods, standard methods for testing specific forms of corrosion (intercrystalline, cavitation, stress, crevice)
5. Corrosion and passivation of major metals:
Iron and steel, aluminium, zinc, copper
6. Corrosion of polymers
7. Corrosion of concrete materials
8. Corrosion protection I – paint coatings
9. Corrosion protection II – galvanization
10. Corrosion protection III – power plants
11. Corrosion protection IV – extreme conditions

Temeljna literatura in viri / Readings:

1. Corrosion – Understanding the Basics, Ed.: J.R. Davis, ASM International, Ohio, ZDA 2011, 563 strani (70%)
2. Introduction to Corrosion Science, E. McCafferty, Springer, 2010, 557 strani (30%)

Cilji in kompetence:

Cilj predmeta je, da se študentje seznanijo z mehanizmi propadanja različnih vrst gradiv (kovinskih, keramičnih, polimernih, kompozitnih) ter z najpogostejšimi praktičnimi pristopi k reševanju te problematike. Študentje si pri predmetu pridobijo naslednje specifične kompetence:

- razumevanje termodinamskih principov, ki vodijo do korozijskih procesov
- razumevanje koroziskske kinetike, temelječe na konceptu mešanih potencialov
- razumevanje kemijskih degradacijskih procesov (kemijske spremembe v betonih, polimernih materialih ipd.)
- poznavanje metod za ugotavljanje hitrosti korozijskih procesov
- poznavanje možnosti kontrole propada gradiv in zaščite pred njo

Objectives and Competences:

Understanding the degradation mechanisms in different materials (metallic, ceramic, polymer, composites) and common practical solutions. Subject specific competences include:

- understanding the principles of thermodynamics which lead to corrosion
- understanding corrosion kinetics, based on the concept of mixed potentials
- understanding chemical degradation processes (chemical changes in concrete structures, polymer materials, etc.)
- acquiring methods for determining the rate of corrosion
- acquiring control methods for material degradation and its prevention
- using appropriate engineering approaches to combat corrosion
- using the knowledge in a chemical process unit

<ul style="list-style-type: none">- obvladovanje izbranih inženirskih pristopov k odpravi praktičnih korozijskih primerov- usposobljenost za uporabo pridobljenega znanja v kemijskem obratu- usposobljenost za samostojno obravnavo specifičnega koroziskskega problema s pomočjo ustrezne literature- usposobljenost za izdelavo poročil o ugotovljenih korozijskih procesih in posledičnih ukrepih	<ul style="list-style-type: none">- ability to deal with a specific corrosion problem by the use of literature- ability for writing reports on corrosion and its negative impacts
--	--

Predvideni študijski rezultati:

Znanje in razumevanje

Razumevanje termodinamskih in kinetičnih principov, ki vodijo do propada gradiv; Poznavanje metod za spremljanje in evalvacijo propada gradiv; Razumevanje fenomenoloških procesov in mehanizmov korozije in pasivacije kovin, propada keramičnih gradiv in polimerov; Znanje o procesih degradacije, ki potekajo na različnih tipih gradiv (kovine, keramika, polimeri, kompozitna gradiva)

Intended Learning Outcomes:

Knowledge and Comprehension

Understanding of thermodynamics and kinetics of corrosion. Understanding principles of testing techniques for evaluation of material degradation and its prevention. Understanding of phenomenological processes and mechanisms of corrosion, passivation of metals, degradation of ceramics and polymers. Obtaining basics of processes of degradation of various types of materials (metals, ceramics, polymers, composites).

Uporaba

Obvladovanje osnovnih inženirskih protikorozijskih ukrepov za različne tipe gradiv in za različne vrste objektov; Razumevanje rezultatov splošnih korozijskih metod Sposobnost uporabe literaturnih podatkov pri reševanju konkretnih korozijskih problemov; Sposobnost povzemanja bistvene informacije iz izbranih korozijskih študij.

Application

Learning basic engineering practice for corrosion prevention of various materials and devices. Application of testing techniques for evaluation of material degradation and its prevention. Ability to summarize important information from literature search and from selected corrosion studies.

Refleksija

Kritična uporaba teoretičnih znanj pri interpretaciji praktičnih meritev; Kritična presoja rezultatov, pridobljenih z različnimi metodologijami.

Analysis

Rational use of theory in interpretation of practical corrosion tests. Coherent evaluation of results obtained by various experimental techniques.

Prenosljive spretnosti

Sposobnost identifikacije in reševanja problemov, vezanih na lastnosti gradiv; Sposobnost povzemanja bistvenih informacij iz strokovne in znanstvene literature; Sposobnost zbiranja, interpretiranja in kritičnega filtriranja (predvsem internetnih) podatkov; sposobnost podajanja

Skill-transference Ability

Ability for identification and solution of corrosion problems related to materials properties. Ability to collect and categorize literature (web) information and ability to present acquired knowledge in written and oral form.

pridobljenega znanja (pisanje poročil, ustne predstavitev).

Metode poučevanja in učenja:

Predavanja (teoretične osnove, klasifikacija korozijskih oblik, podroben študij izbrani primerov propada gradiv, principi protikorozijskih pristopov)
Seminar (študent skupaj s predavateljem izbere konkretno temo, pripravi pisni seminar in zagovarja seminar ustno v obliki mini konference pred predavateljem in kolegi).
Predavatelj ob koncu semestra izda zbirko vseh seminarjev in jo razdeli študentom

Predavanja / Lectures: slovenski / Slovenian

Vaje / Tutorial: slovenski / Slovenian

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Študent oz. kandidat mora imeti predmet opredeljen kot študijsko obveznost.

Prerequisites:

The course has to be assigned to the student.

Vsebina:

Raziskovalno delo se opravlja iz področja kemijskega inženirstva. Vsebina in naslov se določata v soglasju z izbranim mentorjem – nosilcem ene izmed vsebin v programu.

Content (Syllabus outline):

Research work must be carried out in the area of chemical engineering; Student may choose specific area and mentor; Contents of research work are agreed upon with the mentor, who must be a lecturer of at least one of topics of the programme.

Temeljna literatura in viri / Readings:

- knjige in članki, ki so povezani z vsebino raziskovalnega dela/ Textbooks and journal articles from the field of the research work

Cilji in kompetence:

Cilj predmeta je, da študentje s pomočjo laboratorijskega praktičnega dela uporabijo

Objectives and Competences:

Contact with experimental techniques of chemical engineering; Applying theoretical

osvojena teoretična znanja in v praksi spoznajo delovanje kemijsko inženirskega naprav, potek in vodenje procesov za namen pridobivanja oz. sinteze želenega produkta iz specifičnega področja delovanja kemijskega inženirja. Da pri tem uporabijo in osvojijo potrebne instrumentalne in druge karakterizacijske tehnike oz. metode. Da dobljene rezultate z uporabo modernih programskih paketov kvantitativno obravnavajo v skladu s teoretičnimi napovedmi.

Študentje pri predmetu pridobijo naslednje specifične kompetence:

- uporaba pridobljenih znanj na specifičnem področju delovanja kemijskega inženirja;
- samostojno opravljanje raziskovalnega in razvojnega dela.

knowledge in practice; To get the experience in using different engineering tools and devices for process control and for product synthesis; To get the experience in using supporting instrumental and analytical techniques indispensable to collect experimental data; To get the experience in using different software packages for quantitative data analysis in accordance with theoretical predictions; Critical evaluation and presentation of the results in a scientific report. Subject specific competences are the use of theoretical knowledge in a specific area of chemical engineering and independent research and development work.

Predvideni študijski rezultati:

Znanje in razumevanje

Med opravljanjem raziskovalnega dela bo študent pridobil:

- sposobnosti formuliranja problema,
- sposobnosti samostojnega iskanja ustrezone literature,
- sposobnosti obravnavanja problema v praksi,
- sposobnosti iskanja kvantitativnih rešitev in utemeljevanja ustreznosti rešitev,
- sposobnosti predstavitev rezultatov svojega dela.

Uporaba

Znanje in pridobljene veščine bo študent lahko uporabil pri opravljanju poklica in opravljanju magistrskega dela.

Refleksija

Povezovanje vseh pridobljenih teoretičnih znanj z reševanjem problemov na področju kemijskega inženirstva ter kritični pogled na uporabnost teh znanj.

Prenosljive spremnosti

Pri delu bo študent pridobil znanja o metodah reševanja kompleksnih problemov, o načinu prezentacije teh znanj v pisani in govorjeni

Intended Learning Outcomes:

Knowledge and Comprehension

Ability of problem formulating; Ability of literature researching; Ability of problem managing in practice; Ability of quantitative problem solving and argumentation of the solution; Ability to present research results.

Application

Acquired knowledge is necessary for Master's thesis work and for professional work.

Analysis

Integration of knowledge from different topics of chemical engineering and supporting sciences; Development of a critical view on the knowledge applicability.

Skill-transference Ability

Ability of solving complex problems using different methods and skills; Ability of presenting the research work in a written and oral form.

obliki povezani z ostalimi metodami
posredovanja raziskav, ugotovitev itd.

Metode poučevanja in učenja:

Individualno delo mentorja in samostojno
študijsko in raziskovalno delo.

Learning and Teaching Methods:

Independent research work supervised by the
mentor.

Delež (v %) /

Načini ocenjevanja:

Predstavitev raziskovalnega dela.

strižnih in razteznih pogojih. Prenos materialnih reoloških funkcij v modele fluidne dinamike za opis strižnega toka. Uporaba reoloških podatkov in reoloških modelov pri načrtovanju industrijskih procesov. Uporaba rotacijskih in kapilarnih reometrov. Prinzipi merjenja, merilne tehnike in postopki za karakterizacijo reološko kompleksnih tekočin pri (a) destruktivnih in (b) ne-destruktivnih strižnih pogojih. Opredelitev materialnih funkcij pri oscilatornih testih in testih lezenja in obnove. Povezava med in notranjo strukturo materiala in izmerjenimi viskoelastičnimi lastnostmi. Analiza in uporaba eksperimentalnih rezultatov pri razvoju novih materialov, kot kriterij kakovosti v različnih aplikacijah in kot procesni parametri v tehnoloških.

Reološko obnašanje različnih skupin ne-newtonskih tekočin:

- Reologija polimerov: polimerne taline, polimerne raztopine
- Reologija suspenzij: visoko koncentrirane suspenzije (suspenzije keramike, pigmentne suspenzije)
- Reologija šibko-gelskih struktur: (prehrambeni, farmacevtski in kozmetični izdelki)
- Reologija bioloških in telesnih tekočin (kri, krvni nadomestki, slina, synovialna tekočina)

extensional flow. Application of material rheological functions in models of fluid dynamics for describing shear flow. Application of rheological models and experimental data in design of industrial processes. Manipulation with rotational and capillary rheometers. Principles of measurements, measuring techniques and procedures for rheological characterization of complex fluids under (a) destructive and (b) non-destructive shear conditions. Determination material functions from experimental data measured by oscillatory tests and by creep-recovery tests. Relations between internal material structures and experimentally determined viscoelastic properties. Use of measured rheological data in development of new materials, as a quality control criterion in different industrial applications and as process parameters in technological applications.

Rheological characteristics of different classes of non-Newtonian fluids:

Polymer rheology(melts and solutions), rheology of high solids suspensions (ceramics, pigments), rheology of weak gels, rheology of biological fluids (blood, blood substitutes, saliva, synovial fluids)

Temeljna literatura in viri / Readings:

- Uvod v reologijo, A. Zupančič Valant, 2007, Univerza v Ljubljani, FKKT, 103 str., (na voljo: UL FKKT, Katedra za kemijsko, bioekemijsko in ekološko inženirstvo), (100%)
- "Rheology, Principles, Measurements and Applications", Macosko C. W., 1994, VCH Publishers, Inc., New York, 550 s (na voljo: UL FKKT, Katedra za kemijsko, bioekemijsko in ekološko inženirstvo)(20%)
- "Rheology of Industrial Polysaccharides: Theory and Applications", Lapasin R., Prich S., 1995, Blackie Academic & Professional, An Imprint of Chapman & Hall, Glasgow, 620 s (na voljo: UL FKKT, Katedra za kemijsko, bioekemijsko in ekološko inženirstvo) (20%)

Dopolnilna literatura:

- An introduction to rheology, H.A. Barnes, J. F. Hutton K. Walters, 1989, Elsevier, Amsterdam, 199s (na voljo: UL FKKT, Katedra za kemijsko, bioekemijsko in ekološko inženirstvo),
- The Structure and Rheology of Complex Fluids", Larson, R.G., 1999, Oxford University Press, Oxford, 663 s (na voljo: UL FKKT, Katedra za kemijsko, bioekemijsko in ekološko inženirstvo)
- Viscoelastic properties of polymers , J. D: Ferry 3rd edd., 1980, John & Willey, Sons 617 s (na voljo: UL FKKT, Katedra za kemijsko, bioekemijsko in ekološko inženirstvo)

Cilji in kompetence:

Cilj predmeta je predstaviti teoretične reološke principe in uporabo različnih reoloških materialnih funkcij za opis viskoelastičnega obnašanja pri različnih strižnih in nateznih deformacijah. Nadalje je cilj predmeta predstaviti principe eksperimentalne reologije kompleksnih tekočin in poltrdnih materialov. Študent spozna definicije reoloških količin za opredelitev materialih lastnosti snovi in se nauči uporabe reološke karakterizacije ne-newtonskih tekočin pri različnih aplikacijah. Poznavanje vsebine predmeta študentu omogoči znanje o uporabnosti reoloških podatkov in pravilno izbiro reoloških modelov pri razvoju novih produktov, ali kot kriterij kakovosti procesnih materialov. Študent osvoji znanja o značilnostih reološkega obnašanja posameznih skupin procesnih materialov kot so polimeri, šibko-gelske strukture in suspenzije. Študent zna oceniti vpliv reoloških lastnosti realnih tekočin na vodenje različnih tehnoloških procesov. Študent osvoji merilne tehnike in postopke za določanje reoloških lastnosti različnih tipov strukturiranih tekočin in njihov namen.

Objectives and Competences:

To gain the knowledge about theoretical rheological principles and application of different material functions for describing viscoelastic behavior under shear and extensional conditions. To learn the principles of experimental rheology of complex fluids and semi-solid materials. To understand the rheological definitions of material functions for describing material properties and the application of rheological characterization of complex fluids in different technological cases. To gain the knowledge about applicability of rheological data and rheological models in development of new products and in quality control. To learn the methods for rheological characterization of different classes of process materials, such as polymers, suspensions, weak gels. To gain the knowledge how the rheological properties of real fluids influence on controlling of different technological processes. To learn measuring techniques and procedures examination rheological behavior of structured fluids.

Predvideni študijski rezultati:

Znanje in razumevanje

Študent pridobi znanja reologije in reometrije (strižni tok, enostavni strig, strižna hitrost, strižni modul, napetostni tenzor, viskoznost, raztezna viskoznost). Reološke podatke zna povezati z notranjo strukturo materiala in zna opredeliti viskoelastične lastnosti tekočin in poltrdnih snovi. Študent pozna pomen reoloških modelov za opis strižno odvisnega obnašanja in viskoelastičnih lastnosti materiala v različnih aplikacijah: razvoj novih produktov, opredelitev kakovosti materiala, kot procesni parametri v tehnološkem procesu. Študent pozna skupne značilnosti in pomen reologije za različne skupne procesnih materialov kot so: polimeri, suspenzije, šibko-gelske strukture in biološke tekočine.

Intended Learning Outcomes:

Knowledge and Comprehension

Student gains knowledge about rheology and rheometry (shear flow, simple shear, shear rate, shear modulus, shear tensor viscosity, extensional viscosity, etc.). Student understands relations between experimental rheological data and material internal structure and how to examine viscoelastic properties of fluids and semi-solids. Student understands the importance of application rheological models for describing shear dependent behavior in different technological situations and understands the effects of viscoelastic behavior of complex fluids in different applications: (development of new products, in quality control, as process parameters). Knowledge about common rheological characteristics of

	different classes of complex materials (polymers, suspensions, biological fluids).
<u>Uporaba</u> <p>Poznavanje reološkega obnašanja kompleksnih tekočin in poltrdnih snovi je pomembno pri razvoju novih materialov, kot kriterij kakovosti surovin in produktov, v tehnoloških procesih, pri načrtovanju in vodenju industrijskih procesov. Študent se s praktično izvedbo reološke karakterizacije različnih ne-newtonskih tekočin nauči pridobiti reološke podatke potrebne za različne aplikacije. Študent zna uporabiti primerne meritne tehnike in postopke za pridobitev reoloških podatkov, ki so potrebeni v procesu razvoja novih produktov, ali pri načrtovanju tehnoloških procesov. Študent zna uporabiti reološke modele, oziroma njihove parametre pri načrtovanju in vodenju tehnoloških procesov.</p> <p>Uporaba znanja o reoloških lastnostih v posameznih skupinah procesnih materialov (polimeri, suspenzije, gelske strukture) omogoča razumevanje številnih fizikalnih zakonitosti in o poteku kemijskih reakcij.</p>	<u>Application</u> <p>Knowledge about rheological behavior of complex fluids and semi-solids is important for new materials development, for quality control in technological processes, in design and control of industrial plants. Through experimental exercises of rheological characterization of different non-Newtonian fluids student learn how to use rheological data in different applications. Student gains knowledge about measuring techniques and procedures to obtain suitable rheological data necessary for new product development, for controlling technological processes and or in industrial design and about application of rheological models and/or model parameters for controlling technological processes. Knowledge about rheological characteristics of different classes of non-Newtonian materials (polymers, suspensions, weak gels, etc.) enables understanding of various laws of physic and chemical reactions.</p>
<u>Refleksija</u> <p>Na osnovi pridobljenega teoretičnega znanja in praktičnih vaj študent pridobi občutek za ovrednotenje reoloških podatkov in spozna pomen poznavanja reoloških lastnosti pri različnih fizikalno-kemijskih zakonitostih. Študent pridobi spoznanja, da lahko reološke podatke realnih ne-newtonovskih tekočin primerja le pri sorodnih strižnih pogojih ter, da je uporaba reoloških podatkov ne-newtonskih tekočin bistvena za pravilno napoved oz. nadaljnje izvrednotenje parametrov pri hidrodinamskih operacijah.</p>	<u>Analysis</u> <p>On the basis of theoretical knowledge and by experimental work student understands how to examine rheological data and recognizes the importance of knowledge of the rheological properties in several of physical and chemical processes. Student will acquire knowledge that rheological data of non-Newtonian fluids can be compared only under similar shear conditions; furthermore, that the usage of rheological data of complex fluids is essential for correct prediction and/or evaluation of hydrodynamics operations.</p>
<u>Prenosljive spretnosti</u> <p>Študent pridobi občutek za uporabo reoloških podatkov in modelov pri različnih tehnoloških procesih (mešanje, potek geliranja, pretakanje po ceveh itd.) ter kot kriterij kvalitete vstopnih in izstopnih produktov. Poznavanje reoloških lastnosti in zakonitosti posameznih skupin tehnoloških materialov (polimeri, suspenzije</p>	<u>Skill-transference Ability</u> <p>Students will acquire understanding for application rheological data and models in various technological operations (mixing, pipe flow, etc.), and how the rheological data can be used as criteria in quality control (raw materials, products). Student learns the relations between physical- chemical laws of</p>

šibko-gelske strukture, telesne tekočine) omogoča povezovanje in razumevanje različnih fizikalno-kemijskih zakonitosti in se navezuje na predmete, ki vsebujejo omenjene vsebine. Na osnovi eksperimentalne vaje, utrditi teoretično znanje reometrije in reologije, spozna dejavnike, ki vplivajo na vrednosti izmerjenih reoloških količin in zna povezovati mehanske odzive snovi z njeno sestavo, torej z notranjo strukturo snovi. Uporaba različnih literarnih virov (knjige, članki, elektronsko gradivo) omogoča preverjanje pravilnosti osnovnih reoloških konceptov, izbiro primernih reoloških modelov za popis reološkega obnašanja in povezovanje z drugimi naravoslovnimi vedami, ki kot končni rezultat prispevajo k razumevanju proučevanega procesa.

real materials and their rheological properties, which refers to lectures of mentioned subjects. Student consolidates theoretical rheological principles and rheometry by experimental work and meets with factors that influence measured rheological data. Student understands connections between mechanical responses and material composition (internal material structure). Usage of different literature sources (books, articles, electronic sources) enable student to examine basic rheological concepts, selection of suitable rheological models for describing rheological behavior of complex fluids and to find connections with other natural sciences, which, as a final result, contribute to understand investigated process.

Metode poučevanja in učenja:

**Pogoji za vključitev v delo oz. za opravljanje
študijskih obveznosti:**

Študent oz. kandidat mora imeti predmet
opredeljen kot študijsko obveznost.

Prerequisites:

The course has to be assigned to the student.

Vsebina:

Študenti bodo v okviru predmeta spoznali:

- management projektov kot vodilo uspešne izvedbe delovnih procesov
- projektni management in njegove posebnosti
- pomen planiranja ter analiziranja v projektnem managementu
- vodenje tima in posameznikov
- projektno in razvojno delovanje skupin
- zasnova ter organiziranje projektnih skupin
- kadrovska sestava projektnih timov
- delo v projektnih timih
- vloga managerja projekta
- kako sestaviti poslovni načrt in elaborat/plan projekta

Content (Syllabus outline):

Students in this course will learn:

- project management as a guide of the successful execution of business processes
- project management and its characteristics
- the importance of planning and analysis in project management
- how to lead team and individuals
- project and development operation of groups
- conception and organization of project teams
- staffing of the project teams
- work in project teams
- the role of the project manager
- how to prepare the project business case and the project plan

<ul style="list-style-type: none">- kako projektno nalogu predstaviti ter verificirati, jo razstaviti v posamezne faze ter za njihovo realizacijo izbrati ustrezne izvajalce- sistemi projektnih ključev- delitev nalog in nagrajevanje pri projektnem načinu dela- finančna shema managementa projektov- doseganje končnega cilja projekta, vizija, nevarnosti- projektno načrtovanje, vsebina in način izdelave poslovnega načrta <p>kazalniki za vrednotenje uspešnosti projektov</p>	<ul style="list-style-type: none">- how to present a project task, how to verify it, structure it into phases, and select appropriate providers for tasks realization- a systems of project keys- the division of tasks and rewarding work in project- a financial scheme of project management- the achieving of the final project objective, the vision, and the risks- project planning, content and the way of a business plan preparation <p>Indicators for evaluating the success of projects</p>

Cilji in kompetence:

Cilj predmeta je študentom razvijati zavest o pomenu projektnega managementa v gospodarskih družbah, razvijati zmožnosti za timsko delo v podjetjih, razvijati sposobnosti za presojo poslovnih priložnosti, naučiti obvladovati metode in tehnike projektnega managementa ter pridobiti zmožnosti za samostojno vodenje.

Študentje si pri predmetu pridobijo naslednje specifične kompetence:

- vključevanje v poslovni proces

Objectives and Competences:

The objective of the course is to develop an awareness of the importance of project management in companies, to develop the capacity for teamwork in companies, to develop capacity to assess business opportunities, to learn to use the project management methods and techniques, and obtain the capacity for independently management.

Students will gain the following specific competences:

- the integration into the business process

<ul style="list-style-type: none">- sistematičnost pristopa k načrtovanju poslovanja v podjetju- uporaba orodij za presojo uspešnosti projektnega managementa- sistematični pristop k ustvarjanju, pridobivanju in prenosu znanja v prakso- usposobljenost za samostojno izdelavo projektov, njihovo vrednotenje, presojo uspešnosti uvajanja v praksousposobljenost za management projektov	<ul style="list-style-type: none">- a systematic approach to business planning in the company- the usage of tools to assess the effectiveness of project management- a systematic approach for the creation, acquisition and transfer of the knowledge into the practice- the ability to independently create projects, evaluate them, and assess of the successful introduction into practiceability to manage projects
--	--

Predvideni študijski rezultati:

Znanje in razumevanje

Študentje bodo spoznali in razumeli:

- pojme s področja ekonomija, podjetništvo, projektni management in organiziranje dela, v projektnih skupinah, vodenje projektnih timov,
- osnovne zakonitosti projektnega managementa ter organizacije dela v gospodarskih družbah, s poudarkom na primerih iz prakse kakor tudi iz študentovih življenjskih potreb ter izkušenj

Uporaba

Predmet je usmerjen v razumevanje in prepoznavanje značilnosti projektnih podvigov v različnih fazah rasti, analizi podatkov in informacij za management projektov, izdelavi poslovnega načrta za presojo izbrane poslovne ideje, v načrtovanje organizacije enostavnejših in manj zahtevnih projektov, določitev matrike odgovornosti, načrtovanju časa, virov sredstev, dela , stroškov, ozkih grl, analizi in učinkovitosti projektov.

Refleksija

Študentje bodo interpretirali ter pred kolegi analizirali lastno razumevanje projektnega dela, izbranih zahtevni ter manj zahtevnih projektov s področja kemijske stroke. Pri tem bodo uporabili pridobljena teoretična znanja ter jih vrednotili s predstavljenimi praktičnimi problemi oziroma izkušnjami.

Prenosljive spretnosti

Intended Learning Outcomes:

Knowledge and Comprehension

Students will learn and understand:

- terms from economics, entrepreneurship, project management and work organization, project teams,
- basic principles of project management and work organization in companies with emphasis on case studies and the student needs and experiences

Application

The course is focused on understanding and identifying the characteristics of projects in various stages of growth, data analysis and information for project management, preparing the business plan for the assessment of selected business ideas, in the organization planning of simpler and less complex projects, the determination of the responsibility matrix, the planning of time, resources, work, costs, bottlenecks, the analyses and the efficiency of projects.

Analysis

Students will interpret colleagues their own understanding of project work, selected demanding and less demanding projects in the field of chemistry. In this they will use the acquired knowledge and will evaluate them with the presented practical problems or experiences.

Skill-transference Ability

Pri predmetu bo študent pridobil sposobnosti razumevanja projektnega dela, dela v skupinah, pomena projektnega managementa za uspešen management poslovnega procesa v gospodarskih družbah ter v zavodih, za razumevanje strokovne literature. Pridobljene spretnosti bodo študentje znali uporabljati pri organizaciji timskega dela .

Student will acquire skills for understanding of project work, work in teams, the importance of project management for the successful management of the business process in companies and institutions, for understanding the scientific literature. Students will be able to use the acquired skills for the organization of teamwork.

Metode poučevanja in učenja:

Predavanja s pomočjo različnih AV sredstev. Študentom podamo uvod v obravnavano snov, jih napotimo na obravnavo uspešno rešenih projektov v praksi, tudi s pomočjo strokovnjakov iz prakse. Izdelava poslovnega načrta za primer iz kemijske stroke, skupinska obravnavana dobljenih rezultatov.

Learning and Teaching Methods:

Lectures with AV. We give students an introduction of the topic, assign them to deal the successfully solved projects from practice, also with the help of practitioners. Creating a business plan for the chemistry case, group discussion of the obtained results.

Delež (v %) /
