*VABILO NA PREDAVANJE
V OKVIRU DOKTORSKEGA ŠTUDIJA
KEMIJSKE ZNANOSTI*

Prof. Eduardo F. Marques

*Department of Chemistry and Biochemistry
Faculty of Sciences
University of Porto*

z naslovom:

Self-assembled nanostructures: from physical chemistry to nanotechnology and nanomedicine

v sredo, 22. januarja 2020 ob 15:00 uri
v predavalnici 1 v 1. nadstropju Fakultete
za kemijo in kemijsko tehnologijo, Večna pot 113

Vljudno vabljeni!

Abstract:

Many products of our daily life such as shampoos, detergents, inks, paints, clays, asphalt, pharmaceutical drugs and creams, and food products involve colloidal structures, often assembled within the nanoscale (1-1000 nm) or the lower end of the microscale (1-10 μm). At the cutting edge of nanotechnology, many advanced materials rely on colloidal structures assembled together with hard surfaces and materials (e.g. sensors, structural nanocomposites). In this talk, we will address some physicochemical fundamentals that govern the behavior of surfactants, lipids and polymers and other molecules in solution and the formation of self-assemblies, from micelles and vesicles to more complex liquid crystalline structures. Examples of applications of these nanostructures in technology and nanomedicine, namely in drug and gene delivery, will be provided.
