*VABILO NA PREDAVANJE
V OKVIRU DOKTORSKEGA ŠTUDIJA
KEMIJSKE ZNANOSTI*

Prof. Radovan Metelka

*Department of Analytical Chemistry, Faculty of Chemical-
Technology, University of Pardubice, Czech Republic*

z naslovom:

**Recent applications of screen-printed
carbon electrodes in electrochemical
(bio)sensors**

v sredo, 30. januarja 2019 ob 15:00 uri
v predavalnici 1 v 1. nadstropju Fakultete
za kemijo in kemijsko tehnologijo, Večna pot 113

Vljudno vabljeni!

Abstract:

Since their introduction into scientific research by commercial device for glucose sensing thirty years ago [1], screen-printed carbon electrodes clearly manifested their advantages and prominent place within the group of carbon-based electrode materials. They can be easily prepared on various polymeric or ceramic substrates from large, single electrodes up to miniaturized, multi-electrode arrangements. Because of their heterogeneous nature, numerous ways of modification can be utilized to tailor the resulting electrochemical properties of screen-printed carbon electrodes.

Up to nowadays, a great variety of electrochemical (bio)sensors based on screen-printed carbon electrodes were developed for the determination of countless number of inorganic [2-4], organic [4-6] and biologically active compounds [6-8]. Several milestones in the use of screen-printed carbon electrodes will be highlighted and the wide range of electroanalytical applications for important analytes will be reviewed [9]. Recent trends in the use of screen-printed carbon electrodes, such as electroanalysis with the aid of quantum dots, electrochemical immunoassays or wearable (bio)sensors, will be also demonstrated.
