

UČNI NAČRT PREDMETA / COURSE SYLLABUS

Predmet:	ANALIZE TVEGANJA
Course Title:	RISK ANALYSIS

Študijski program in stopnja Study Programme and Level	Študijska smer Study Field	Letnik Academic Year	Semester Semester
UŠP Tehniška varnost, 1. stopnja	/	3.	5.
USP Technical Safety, 1 st Cycle	/	3 rd	5 th

Vrsta predmeta / Course Type obvezni / Mandatory

Univerzitetna koda predmeta / University Course Code: TV118

Predavanja Lectures	Seminar Seminar	Vaje Tutorial	Klinične vaje Work	Druge oblike študija	Samost. delo Individ. Work	ECTS
45	/	30 LV	/	/	75	5

Nosilec predmeta / Lecturer: doc. dr. Sabina Huč / Dr. Sabina Huč, Assistant Professor

Jeziki / Languages: Predavanja / Lectures: Slovenski / Slovenian
Vaje / Tutorial: Slovenski / Slovenian

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti: **Prerequisites:**

Študent oz. kandidat mora imeti predmet opredeljen kot študijsko obveznost.	The course has to be assigned to the student.
---	---

Vsebina:

Kako sprejeti odločitev ali uporabiti kvantitativno varnostno analizo
 Pravilna ocena argumentov za izvedbo varnostne analize
 Izbor in uporaba kvantitativne varnostne analize, ter seznanitev z vsemi kvalitativnimi in kvantitativnimi elementi varnostne analize.
 Uporaba modelov za komponente sistemov in ugotavljanje podatkov za te modele. (Baze podatkov o posameznih pomembnih komponentah ter kvantitativne metode določanja parametrov zanesljivosti komponent)
 Induktivne metode

- Failure Mode and Effect Analysis (FMEA), Failure Mode Effect and

Content (Syllabus outline):

How to take decision to use qualitative risk analysis
 Argument based decision to use risk analysis
 Selection and use of risk assessment, Acquaintance with all qualitative and quantitative elements of risk assessment.
 Use of models for system components and data base collection for these models. (Quantitative methods for reliability model parameter determination)

- Failure Mode and Effect Analysis (FMEA), Failure Mode Effect and Criticality Analysis (FMECA)
- Hazard and Operability Study (HAZOP)

Deductive methods

- Event tree (accident scenario analysis)

<p>Criticality Analysis (FMECA) (sistematične metode analize odpovedi sistemov)</p> <ul style="list-style-type: none"> • Hazard and Operability Study (HAZOP) (sistematične metode analize nevarnosti med obratovanjem) <p>Deduktivne metode</p> <ul style="list-style-type: none"> • Drevo dogodkov (analiza nezgodnih scenarijev in njihovo logično modeliranje) • Drevo odpovedi (analiza odpovedi posameznih sistemov in njih logično modeliranje) <p>Analiza napak s skupnim vzrokom Analiza človeške zanesljivosti Analiza zunanjih dogodkov Vrednotenje modelov s pomočjo računalniških programov ter interpretacija rezultatov. Definiranje meril pomembnosti in njihova vloga pri vrednotenju. Merila, izračun in predstavitev ocen tveganja</p> <ul style="list-style-type: none"> • Mere tveganja • Predstavitev tveganja • Izračun tveganja • Negotovosti občutljivosti in pomembnost pri tveganju <p>Uporaba rezultatov kvantitativne analize za upravljanje s tveganjem Interpretacija kvantitativnih rezultatov v varnostni analizi in pomembnost predpostavk pri tem Metode za oceno organizacijskih faktorjev</p> <ul style="list-style-type: none"> • Management Oversight and Risk Tree (MORT) • Work Process Analysis Model (WPAM) 	<p>and their logical modeling</p> <ul style="list-style-type: none"> • Fault tree analysis (System logical modeling) <p>Common Cause Failures Human reliability analysis External event analysis Quantitative evaluation of models using computer codes and interpretation of the results Importance measures definition and their role within evaluation of risk Risk measures and representation of risk assessment</p> <ul style="list-style-type: none"> • Risk measures • Risk representation • Risk calculation • Uncertainties, sensitivity and importances within risk <p>Use of the results of quantitative analysis for risk management Interpretation of qualitative results in risk assessment and importance of assumptions Methods for organizational factors assessment</p> <ul style="list-style-type: none"> • Management Oversight and Risk Tree (MORT) • Work Process Analysis Model (WPAM)

Cilji in kompetence:

Namen predmeta je seznaniti študente z uporabo metod za analize tveganj. Teoretično bodo študenti spoznali metode na predavanjih praktično pa na vajah pri katerih bodo spoznali tudi računalniške programe za izvajanje takih analiz. S pomočjo seminarske naloge bodo znanje utrdili in s pomočjo ene od metod rešili praktični realni problem.

Objectives and Competences:

Aim of the course is to teach students with the use of risk assessment methods. Theoretically they will learn methods and practically during exercises. Students will learn how to use computer codes for risk analyses. During seminar work they will solve realistic problem.

Predvideni študijski rezultati:

Znanje in razumevanje

Študent bo pridobil osnovna teoretska in praktična znanja, ki so potrebna za razumevanje različnih analiznih postopkov, ki jih inženir nujno potrebuje pri vsakodnevni odločitvah in je temeljni pogoj za izvedbo praktičnih analiz. Prav tako bodo sposobni kritično presoditi zmogljivosti nekaterih analiznih metod, primerjati kvalitativne in kvantitativne metode. Razen teoretskih temeljev bodo pridobili tudi praktična znanja.

Uporaba

Analiza tveganj je usmerjena v reševanje praktičnih problemov, ki so nujni tako pri snovanju varnejših sistemov. Pri predmetu bodo študentje pridobili znanja, ki jim omogočajo izvedbo preprostih in zahtevnejših analiz. Poleg matematičnih osnov, ki so osnova razumevanje analiz bodo pridobili tudi praktična znanja, ki so potrebna pri zasnovi in izvedbi logičnih modelov ter interpretaciji podatkov in dobljenih rezultatov. Pomemben vidik predmeta je predstaviti študentu kritičen pogled na podajanje rezultatov in zmogljivosti različnih analiz.

Refleksija

Kritična presoja uporabnosti posameznih metod za oceno tveganja.

Intended Learning Outcomes:

Knowledge and Comprehension

Student will obtain basic theoretical and practical skills, needed for understanding analytical practices that engineer needs in everyday decisions and is fundamental condition for performing analysis. Besides theoretical fundamentals students will obtain also practical skills.

Application

Risk analysis is oriented towards solving of practical problem, which are needed for design of safer systems. The course will enable students to perform more basic and also more advanced analyses. Besides mathematical basics that are fundamental for analysis understanding students will obtain also practical knowledge needed for making logical models and for interpretation of input data and the results. Important aspect of the course is to present to student critical view on results and on possibilities of different analyses.

Reflection

Critical judgement for use of different risk assessment methods.

Prenosljive spretnosti

Pri predmetu bo študent pridobil intelektualne spretnosti, znal bo uporabljati podatke iz literature, izvajati izračune za pridobitev uporabnih podatkov, eksperimentalne podatke bo znal ustrezno obdelati ter primerno interpretirati.

Skill-transference Ability

During the course will student obtain intellectual skills, he will be able to use data from literature, he will be able to calculate data needed for analysis based on experimental data and to process them and interpret them soundly.

Metode poučevanja in učenja:

Predavanja
Vaje

Learning and Teaching Methods:

Lectures
Exercises

Načini ocenjevanja:

Delež (v %) /
Weight (in %)

Assessment:

Način (pisni izpit, ustno izpraševanje, naloge, projekt)

70%

Izpit pisni in ustni. Ocene: 6-10 pozitivno

30%

Vaje: Opravljen kolokvij Pri vajah predstavlja delež ocene tudi uspešno delo na vajah (1/3).
